

ABOUT THE AUTHORS

David N. Becker, F.S.A. 1979, is vice president of Lincoln National Corporation, a company he joined in 1975 as an actuarial student. He received a bachelor's degree in mathematics from St. Louis University in 1967, a master's degree in mathematics from Washington University in 1969, and a Ph.D. in mathematics from St. Louis University in 1973. Dr. Becker has served on the Society's Part 5 Examination Committee and the Professional Development Committee and on the Academy's Life Committee and Universal Life Task Force. He was 1991 chairperson of the Society's Individual Life Insurance and Annuity Product Development Section Council, a member of the Research Policy Committee, and insurance chairperson of the project oversight group on option pricing. His papers have appeared in *Best's Review* and *Reinsurance Reporter*, and his paper "A Generalized Profits Released Model for the Measurement of Return on Investment for Life Insurance," which appeared in Volume XL (1988) of the *Transactions*, won the Annual Prize for 1988-89.

Patrick L. Brockett, not a member of the Society, is the Joseph H. Blades Professor of Insurance at the University of Texas at Austin, where he holds appointments in the departments of finance, mathematics, management science and information systems, the IC² Institute, and the Applied Research Laboratories. Previously, Dr. Brockett served as Director of the Actuarial Science Program and held the Paul V. Montgomery Professorship in Actuarial Science at the same institution. He is a Fellow of the Institute of Mathematical Statistics and of the Royal Statistical Society, a full member of the Operations Research Society, and a member of the American Risk and Insurance Association, the American Finance Association, the American Association for the Advancement of Science, and the American Statistical Association. Dr. Brockett is also an associate editor of *Insurance: Mathematics and Economics* and serves on the Society of Actuaries' Committee on Relations with Statistical Organizations. He has published more than 65 articles in actuarial science, insurance, probability, statistics, and stochastic methods in business and economics. Papers published in the *Transactions* include "Optimal Ruin Calculations Using Partial

Stochastic Information” and “Statistical Adjustments of Mortality Tables To Reflect Known Information,” both with Samuel H. Cox, Jr., in Volume XXXVI (1984).

Shane A. Chalke, F.S.A. 1982, is president of Chalke Incorporated, an actuarial and financial consulting service he founded in 1983. He has lectured extensively in the areas of macro pricing theory and asset/liability management and has written numerous articles for *Best's Review*, *Life Insurance Selling*, and *Financial Planning*. Chalke is a member of the Society's Board of Governors and past chairperson of the Individual Life Insurance and Annuity Product Development Section Council. He is co-author of “Universal Life Nonforfeiture and Valuation: A Generalized Model” (with Michael F. Davlin), which appeared in Volume XXXV (1983) of the *Transactions* and won both the Annual Prize and the Triennial Prize.

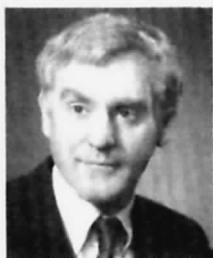

Samuel H. Cox, Jr., F.S.A. 1980, is the A. J. Pasant Professor of Life Insurance and Financial Services at Michigan State University, where he teaches insurance, finance, and risk management. He received B.A. and M.S. degrees in mathematics from Texas Christian University and a Ph.D., also in mathematics, from Louisiana State University. He taught actuarial science at the University of Nebraska-Lincoln and the University of Texas at Austin. His real-world actuarial experience includes service with Pan American Life Insurance Company and The Wyatt Company. He is the Society's liaison representative to the American Risk and Insurance Association, is a member of the Society's Committee on Papers, Research Paper Committee and the Course V-380 Examination Committee, and served on the Task Force on Strengthening Relations with Colleges and Universities. Dr. Cox is a member of the American Statistical Society, American Mathematical Society, Mathematics Association of America, American Finance Association, and American Risk and Insurance Association. He has published papers in the *Journal of Risk and Insurance*, *Scandinavian Actuarial Journal*, *Journal of the American Statistical Association*, *Journal of Economics and Business*, *The American Statistician*, *Journal of Algebra*, *Pacific Journal of Mathematics*, *Duke Mathematics Journal*, and

Transactions of the American Mathematical Society. Two papers have appeared in the *Transactions*: "Optimal Ruin Calculations Using Partial Stochastic Information" and "Statistical Adjustment of Mortality Tables To Reflect Known Information," both with Patrick L. Brockett, in Volume XXXVI (1984).

Theresa R. DiVenti, not a member of the Society, is an actuary for the U.S. Department of Housing and Urban Development. She received a B.A. in both mathematics and economics from Trinity College, Washington, D.C. and an M.S. degree in applied statistics from George Washington University. In her spare time, she studies for actuarial examinations. Previous work experience includes an internship with the International Trade Administration of the U.S. Department of Commerce and a year at the U.S. Department of Labor Statistics, as an economist. Her paper in this volume, "Modeling Home Equity Conversion Mortgages" (with Thomas N. Herzog), won the AERF Practitioners Award in 1990.

Thomas N. Herzog, A.S.A. 1977, is chief actuary of the Federal Housing Administration and is primarily involved with the FHA mortgage guarantee insurance programs. He previously worked as a mathematical statistician for both the Social Security Administration and the National Highway Traffic Safety Administration. He has an Sc.B. in applied mathematics from Brown University and a Ph.D. in mathematical statistics from the University of Maryland. Dr. Herzog is the author of numerous technical articles, including the Society's Course 130 study note on credibility. He has also taught various actuarial science courses at a number of universities and companies in the Washington, D.C. area. His *Transactions* papers are "Analyzing Recent Experience on FHA Investor Loans," Volume XL (1988), and "Credibility: The Bayesian Model Versus Buhlmann's Model," Volume XLI (1989). His paper in this volume, "Modeling Home Equity Conversion Mortgages" (with Theresa R. DiVenti), won the AERF Practitioners Award in 1990.

Kenneth G. Manton, not a member of the Society, is research professor and research director of demographic studies at Duke University and medical research professor at Duke University Medical Center's department of community and family medicine. Dr. Manton is also a senior fellow of the Duke University Medical Center's Center for the Study of Aging and Human Development and assistant director of the Duke University Center for Demographic Studies. In 1986, he was named head of the World Health Organization Collaborating Center for Research and Training in the Methods of Assessing Risk and Forecasting Health Status Trends as Related to Multiple Disease Outcomes. In 1990, Dr. Manton was the recipient of the Mindel C. Sheps Award in Mathematical Demography presented by the Population Association of America. His current research interests include the forecasting of morbidity, disability and mortality among the nation's elderly, reimbursement maintenance of quality of care for both acute and long-term-care services consumed by the elderly, mathematical modeling of physiological aging processes of human mortality at advanced ages, and differentials in those processes by sex and race, and cross-nationality.

S. David Promislow, F.S.A. 1962, is a professor in the department of mathematics and statistics at York University. In 1960, he received a B.Comm. (Hons) degree from the University of Manitoba and began his actuarial career with the Crown Life Insurance Company. He received a Ph.D. from the University of British Columbia in 1970. For the Society, he has served on the Committee on Papers and the Committee on Research on Theory and Applications and is currently serving on the Publications Index Committee and the Research Paper Committee. Dr. Promislow has published numerous papers in both actuarial science and pure mathematics that have appeared in the *Journal of Economic Theory*, *Insurance: Mathematics and Economics*, *ARCH*, *Journal of Combinatorial Theory*, *Canadian Journal of Mathematics*, *Proceedings of the London Mathematical Society*, *Proceedings of the American Mathematical Society*, and *Pacific Journal of Mathematics*. His *Transactions* papers include "New Approach to the Theory of Interest," Volume XXXII (1980); "Extensions of Lidstone's Theorem," Volume XXXIII (1981); and "Measurement of Equity," Volume XXXIX (1987).

Colin M. Ramsay, A.S.A. 1984, is an associate professor of actuarial science at the University of Nebraska-Lincoln. He obtained his B.Sc. degree in actuarial science from the City University, London, England, in 1979 and his M.Math and Ph.D degrees in statistics from the University of Waterloo, Ontario, Canada, in 1980 and 1984, respectively. His research interests include ruin theory, the impact of AIDS on insurance, and the adequacy of pension funding levels. Dr. Ramsay's papers have appeared in the *Journal of Risk and Insurance*, *Journal of the Institute of Actuaries*, *ASTIN Bulletin*, *Insurance: Mathematics and Economics*, and *Scandinavian Actuarial Journal*. His papers "AIDS and the Calculation of Life Insurance Functions" and "The Impact of Mortality on Panjer's Model of AIDS Survival" appeared in Volume XLI (1989) and in Volume XLII (1990), respectively, of the *Transactions*. His paper "A Practical Algorithm for Approximating the Probability of Ruin" will appear in Volume XLIV (1992) of the *Transactions*.

Robert R. Reitano, F.S.A. 1980, received a B.A. and an M.A. in mathematics from the University of Massachusetts and a Ph.D., also in mathematics, from the Massachusetts Institute of Technology. He is senior investment policy officer and director of research at John Hancock Mutual Life Insurance Company. He has been an assistant professor at the University of Massachusetts, an instructor for the Actuaries Club of Boston, and a visiting scholar at M.I.T. For the Society, he has been an instructor of a risk theory seminar, moderator of a panel discussion on Funding for Investment Risk at the 1990 Annual Meeting, and a panelist on a teaching session, "Interest Rate Convexity," at a 1991 Spring Meeting. He is serving on the Investment Course Content Committee and is a member of the Committee on Papers. He has also presented three seminars on Multivariate Duration Analysis, two seminars on Multivariate Immunization Theory with additional programs scheduled for the Society. Dr. Reitano is a member of the American Academy of Actuaries, the Mathematical Association of America, and Sigma Xi. He has published papers in *ARCH*, *The Journal of*

Portfolio Management, and the *Transactions*: "Mortality Cost Valuation of Underwriting Requirements," Volume XXXIV (1982), and "A Statistical Analysis of Banded Data with Applications," Volume XLII (1990).

H. Dennis Tolley, A.S.A. 1981, graduated from Brigham Young University and received his Ph.D. in biostatistics from the University of North Carolina. Since then he has taught at Duke University Medical School and Texas A&M University Institute of Statistics and has worked at the Radiation Effects Research Foundation in Hiroshima, Japan, and Battelle Pacific Northwest Laboratories in Richland, Washington. Currently, Dr. Tolley is professor in the department of statistics at Brigham Young

University. His research interests are primarily in health statistics and health modeling. Since receiving his Associateship, much of his research interest has been focused on including costs as a component of health care modeling. Dr. Tolley has worked with both the World Health Organization and the World Bank in the use of health care models as a means of assessing long-term effects on interventions and health care policies. He is currently working with other researchers in developing models for two Third World countries. Dr. Tolley has published research articles in many journals including *Transactions* ("An Empirical Method of Comparing Risks Using Stochastic Dominance," with Michael Korosok, Volume XLI, 1989), *Journal of Risk Analysis*, *Journal of Risk and Insurance*, *Scandinavian Actuarial Journal*, *Journal of the American Statistical Association*, and *Biometrics*.
