

**TRANSACTIONS OF SOCIETY OF ACTUARIES
1991-92 REPORTS**

**VARIATION BY DURATION IN SMALL GROUP
MEDICAL INSURANCE CLAIMS**

STEPHEN D. BRINK, JAMES C. MODAFF, AND STEVEN J. SHERMAN

I. OVERVIEW

The purpose of this research report is to measure the variation in small group medical insurance claim costs by duration from issue. For purposes of this study, a small group is defined as a group with 1 to 25 employees. This report also examines the durational variation by underwriting approach, size of group and preexisting-condition limitation.

This study was based on more than \$1.2 billion of small group medical claims incurred during 1988 and 1989. Data were provided by seven insurance carriers active in the small group market, who generously contributed to this study. All claims were adjusted to remove any company differences due to benefits, geographic area, time period, and demographics.

The results indicate that small group medical claim costs vary significantly by duration from issue as a result of underwriting and preexisting-condition limitations. In general, claim costs are relatively low in the first year of issue and rise rapidly during the next three to five years, after which the effect tends to wear off. Significant variation also occurs by group size.

In addition to measurement of the variation by duration, the data allowed a comparison of adjusted claim costs by underwriting approach, group size, and preexisting-condition limitation. While the difference between long-form and short-form underwriting was inconclusive, guarantee-issue claim costs were significantly higher than those for underwritten business. By size, claim costs tended to exhibit a U-shaped pattern with the highest claim costs experienced by the smallest and largest of groups. Groups without a preexisting-condition limitation experienced much higher claim costs at the later durations.

The remainder of this report summarizes the study methodology and results in greater detail. A disk containing the results of this study is available.

II. METHODOLOGY

A. Participating Companies

Twenty-two major insurance companies active in the small group market were initially contacted by telephone to determine their interest in contributing data for this research project. Of these, 17 companies indicated an

interest and were sent a copy of the written data request summarizing the form and extent of the desired information. Seven companies ultimately contributed to this study:

- Boston Mutual Life Insurance Company
- Celtic Life Insurance Company
- Continental American Life Insurance Company
- Employers Health Insurance Company
- John Alden Life Insurance Company
- The New England
- Time Insurance Company.

The data for Boston Mutual Life Insurance Company, Continental American Life Insurance Company and The New England were provided by Dun & Bradstreet Plan Services.

A significant effort on each company's part was required to develop the detailed reports that formed the basis for this study. Without their assistance and timely cooperation, this study would not be possible.

Combined, the data submitted included more than \$1,250,000,000 of claims incurred during 1988 and 1989 and nearly 12,200,000 employee exposure months. All data submitted by the companies were included in the study and were combined for purposes of analysis.

B. Data Collection Guidelines

A study period of calendar years 1988 and 1989 was selected since payments for claims incurred in these years would be nearly complete as of early 1991, the commencement of this study. The data were separated by month for the first three years and by year through the sixth year, with data for years seven and later combined.

Incurred claims and exposure data were separated by underwriting approach, group size and preexisting-condition limitation. Underwriting approaches included long-form, short-form, and guarantee issue. The five group size categories used were 1 employee, 2-4 employees, 5-9 employees, 10-14 employees, and 15-25 employees. The four defined preexisting-condition limitation provisions were: none, 3 months, 6 months, and 12 months of insurance coverage.

Separate reports were produced by each company, summarizing earned premium, incurred claims, claim adjustments and exposure, for each combination of underwriting approach, group size and preexisting-condition limitation. The format is shown in Table 1. While the combination of these

variables produces a potential of 60 study cells, only 20 cells were available, since little business was written by contributing companies in many of these cells.

TABLE 1
INPUT DATA REPORT FORMAT

(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11) Adjusted Incurred Claims per Exposure
Duration	Exposure Period	Premium	Incurred Claims	Benefit Adjustment	Area Adjustment	Trend Adjustment	Demographic Adjustment	Adjusted Incurred Claims	Exposure	
1 mo	1988									
2 mo	1988									
.										
.										
36 mo	1988									
4 yr	1988									
5 yr	1988									
6 yr	1988									
7+ yr	1988									
1 mo	1989									
2 mo	1989									
.										
.										
36 mo	1989									
4 yr	1989									
5 yr	1989									
6 yr	1989									
7+ yr	1989									

Several guidelines were followed in compiling the study data. These guidelines include:

1. Only groups of 1 to 25 employees were included in the study. Group size was determined as the average number of covered employees in the group during each experience period.
2. Only major medical plans with deductibles of \$500 or less were included. Plans such as hospital only, accident only, cancer, disability, and dental were excluded. However, maternity, supplemental accident and other related optional medical benefits were included when part of a major medical plan.
3. Incurred claims represent services rendered during the study period. Dependent, as well as employee, claims were included. The incurred claim data were prior to any reinsurance, with no adjustments made to reflect any reinsurance coverage.

4. Date of issue was defined as the most recent date when a group was subject to medical underwriting. Thus, if a group was subject to medical underwriting or a new pre-existing-condition limitation after the original date of issue, the later date was used as the date of issue.
5. Duration was measured as the number of months or years elapsed from the date of issue to the experience period. For example, a group with a January 1, 1988 date of issue is defined as being in its second duration month during February 1988. A group with a June 1, 1985 date of issue would be in its fourth duration year from June 1, 1988 through May 31, 1989.
6. Exposure was measured as the number of months an employee was eligible for benefits during the study period. An exposure unit was counted as either one single employee or one employee with dependent coverage.
7. Short-form underwriting included applications with less than five general health questions, while long-form underwriting included applications with more detailed questions. Evaluation of the underwriting questions, how companies use the underwriting information, and how a company's underwriting practices changed over time was outside the scope of our study.
8. Because a wide variety of preexisting-condition limitations are in common use, these limitations were grouped by the number of months of continuous insurance coverage required prior to coverage of preexisting conditions. Therefore, a 3-6-12 preexisting condition clause (3 months without treatment, 6 months of active work, or 12 months of insurance coverage) was defined as a 12-month clause in the study.

C. Data Adjustments

Inurred claims for each study cell were adjusted by the contributing carriers to remove the effect of differences due to benefit plan, geographic area, time period, and the demographic characteristics of covered employees. The factors used to normalize the data were developed from information contained in the Milliman & Robertson, Inc. Health Cost Guidelines.

- Benefit adjustment factors were developed for 52 broad deductible, coinsurance and out-of-pocket limit combinations. For plans that did not exactly match the combinations provided, the benefit factor for the plans closest to the actual policy benefit was used.
- Area adjustment factors were based on the first three digits of the zip code corresponding to the location of the employer.
- Trend adjustment factors assumed an annual rate of 13 percent. Trend was calculated from the midpoint of the experience period to July 1, 1989 in order to properly weight the data within the study period. A small change in the assumed trend factor does not have a significant effect on the study results.

- Demographic adjustment factors were developed based on the age, sex, and family status of covered employees. Separate factors were provided for policies that cover maternity and those that exclude maternity.

Aggregate incurred claims for each data cell were divided by the product of the adjustment factor for benefits, geographic area, trend, and demographics to develop adjusted incurred claims. General reasonableness checks were performed based on aggregate premium, incurred claims, and exposure along with the adjustment factors submitted by each company to ensure that data collection procedures were followed and adjustment factors were applied appropriately.

Adjusted monthly claim costs were then calculated for each duration by dividing the adjusted incurred claims by the monthly exposure for each data cell. Durational slopes were then calculated by dividing the adjusted monthly claim cost at each duration by the average second-year claim cost for each study cell.

D. Data Credibility and Limitations

When interpreting the results shown in this report, the reader should consider the volume of data available in any one data cell and the mix of carrier data included in the study.

Most of the data reflect short-form underwriting, although a considerable amount of long-form data were included. Relatively little data were available on either a guarantee-issue basis and/or with no preexisting-condition limitation. All the guarantee-issue business was written with a 12-month preexisting-condition limitation. All the no preexisting-condition limitation business was written with short-form underwriting. No business was written with a 3-month or 6-month preexisting-condition limitation. By size, most of the exposure was for 2–9 employee groups. In all instances, the volume of data tends to decrease significantly at the later durations because of the relatively high lapse rates associated with small group coverage.

Not all companies contributed data in equal volume by underwriting form, size and preexisting-condition limitation. The long-form underwriting data were submitted by a few companies, as were the guarantee-issue and no preexisting-condition limitation data. In addition, while claim costs have been adjusted for benefits, geographical area, time period, and demographics, many other factors can influence actual claim costs by company, making comparisons difficult.

There is a significant amount of employee turnover for small group employers. New entrants are generally subject to the underwriting approach applicable to the group at the time the new employee is to be added. Therefore, results shown in this report include the impact of some newly underwritten employees at each duration.

Finally, while we have reviewed the data submitted by the contributing companies for reasonableness, we have not verified or audited this information. Thus, we have relied on the data as submitted.

E. Exposure

As shown in the following tables, the exposure varied significantly by underwriting approach, group size, and preexisting-condition limitation. Exposure also varied by duration.

1. Underwriting Approach (Table 2)

Approximately 70 percent of the total study exposure is based on short-form underwriting. Long-form underwritten business represents another 23 percent of the total exposure, while guarantee issue represents 7 percent of total exposure.

This exposure excludes 492,000 exposure units for groups with no preexisting-condition limitation, since these groups were also excluded when determining the results by underwriting approach, as shown Section III of this report. Overall study exposure was 12,194,000 employee months.

TABLE 2
EXPOSURE BY UNDERWRITING APPROACH
(000's)

Duration Year	Underwriting			Total
	Long Form	Short Form	Guarantee Issue	
1	1,162	4,624	129	5,915
2	703	1,932	104	2,739
3	360	916	52	1,328
4	232	512	44	788
5	154	258	34	446
6	92	111	19	222
7+	119	138	7	264
Total	2,822	8,491	389	11,702

2. Group Size (*Table 3*)

Exposure by group size is concentrated in the 2-4 and 5-9 life categories. These categories account for roughly 36 percent and 30 percent of total exposure, respectively.

The exposure shown in Table 3 excludes 389,000 and 492,000 exposure units for groups with guarantee-issue underwriting and no preexisting-condition limitation, respectively, to be consistent with the tabulation of results shown by group size in Section III of this report.

TABLE 3
EXPOSURE BY GROUP SIZE
(000's)

Duration Year	Group Size					Total
	1	2-4	5-9	10-14	15-25	
1	403	1,901	1,738	1,004	740	5,786
2	253	1,004	828	343	207	2,635
3	144	543	378	126	85	1,276
4	78	336	205	68	56	743
5	41	189	112	39	32	413
6	19	92	58	19	15	203
7 +	20	108	71	32	26	257
Total	958	4,173	3,390	1,631	1,161	11,313

3. Preexisting-Condition Limitation (*Table 4*)

More than 92 percent of the exposure is for groups with a 12-month preexisting-condition limitation. Little exposure was available for business with no preexisting-condition limitation, especially at the later durations. Also, none of the companies submitted data for business with a three-month or six-month preexisting-condition limitation.

This exposure excludes 389,000 exposure units for groups with guarantee-issue underwriting, to be consistent with the exposure underlying the results shown by preexisting condition limitation in Section III of this report.

III. RESULTS

A. Variation by Duration

The results of the study indicate that small group medical claim costs vary significantly by duration since issue as a result of underwriting and preexisting-condition limitations. These results also vary by size of group. The

TABLE 4
EXPOSURE BY PREEXISTING-CONDITION LIMITATION
(000's)

Duration Year	Preexisting-Condition Limitation		Total
	None	12 Months	
1	282	5,786	6,068
2	115	2,635	2,750
3	49	1,276	1,325
4	23	744	767
5	16	412	428
6	6	203	209
7 +	1	257	258
Total	492	11,313	11,805

durational slope in the first year generally appears to be quite steep in relation to subsequent periods. For example, Table 5 shows the durational slope in the first year for all group sizes combined with a 12-month preexisting-condition limitation and short-form underwriting. Other study cells produce different results.

TABLE 5
SHORT-FORM UNDERWRITING
DURATIONAL SLOPE

Duration	Durational Slope
Month 1	0.38
Month 2	0.56
Month 3	0.64
Month 4	0.69
Month 5	0.72
Month 6	0.78
Month 7	0.78
Month 8	0.82
Month 9	0.85
Month 10	0.83
Month 11	0.90
Month 12	0.91
Year 2	1.00
Year 3	1.13
Year 4	1.12
Year 5	1.24
Year 6	1.27
Years 7 +	1.22

The following sections summarize the observed variation by duration by year. Monthly durational data for the first three years are also shown in the Appendix. Tables A1, A2, and A3 summarize the detailed durational slope, adjusted monthly claim cost and monthly exposure data, respectively, while Table A4 contains the detailed data for each study cell.

1. Underwriting Approach

For purposes of comparison, contracts with no preexisting-condition limitations were excluded when measuring the effects of underwriting. Thus, these results all reflect a 12-month preexisting-condition limitation. Annual durational patterns by underwriting approach are summarized in Table 6.

TABLE 6
DURATIONAL SLOPE BY UNDERWRITING APPROACH

Duration Year	Underwriting		Guarantee Issue
	Long Form	Short Form	
1	0.68	0.71	0.57
2	1.00	1.00	1.00
3	1.22	1.13	0.98
4	1.17	1.12	0.88
5	1.24	1.24	0.93
6	1.21	1.27	0.92
7+	1.23	1.22	0.71

The durational slopes for short-form and long-form underwriting are fairly similar, after allowing for data fluctuations. The slope increases fairly rapidly in the first three to five durations, followed by a relatively flat slope at later durations. First-year claim costs are roughly 30 percent less than second-year costs.

The guarantee-issue slope is relatively flat after the first year, as might be expected. The lower first-year slope is probably due to the 12-month preexisting-condition limitation.

2. Group Size (Table 7)

The annual duration slopes by group size include experience for long-form and short-form underwriting and 12 months preexisting-condition limitation. Experience for guarantee-issue policies and policies with no preexisting-condition limitation are not included.

TABLE 7
DURATIONAL SLOPE BY GROUP SIZE

Duration Year	Group Size				
	1	2-4	5-9	10-14	15-25
1	0.65	0.65	0.69	0.71	0.81
2	1.00	1.00	1.00	1.00	1.00
3	1.10	1.17	1.10	1.25	1.25
4	1.02	1.11	1.15	1.18	1.43
5	1.29	1.26	1.30	1.34	1.07
6	1.30	1.27	1.34	1.17	1.37
7+	1.32	1.28	1.24	1.27	1.40

The variation by duration for medical claim costs generally follows the same pattern for all group sizes. The slope increases fairly rapidly in the first three to five years and remains relatively flat thereafter. However, the smaller groups tend to exhibit a somewhat steeper slope at the early durations and a flatter slope at the later durations than the larger groups. This effect may be due to the tighter underwriting rules typically used with smaller groups.

3. Preexisting-Condition Limitation (Table 8)

Limited information was available to measure duration patterns by pre-existing-condition limitation. No data were available for three- and six-month clauses, and a relatively small amount of data was available for the no preexisting-condition provision. The data submitted for the no preexisting-condition limitation include short-form underwriting and primarily groups of 1-9 employees. Experience for guarantee-issue policies is not included in this analysis.

TABLE 8
DURATIONAL SLOPE BY PREEXISTING-
CONDITION LIMITATION

Duration Year	Preexisting-Condition Limitation	
	None	12 Months
1	0.64	0.69
2	1.00	1.00
3	1.32	1.16
4	1.11	1.15
5	1.44	1.27
6	1.50	1.29
7+	0.58	1.28

In general, the durational slope for contracts with no preexisting-condition limitation is steeper than that for contracts that include a 12-month preexisting-condition limitation.

B. Claim Cost Variation

In addition to measurement of the variation of small group medical claims by duration, the data allow for comparisons of adjusted claim costs by underwriting approach, group size, and preexisting-condition limitation. The claim costs per employee represent a composite cost of those employees with single coverage and those employees with dependent coverage. Medical claim costs require medical trend and experience adjustments when projecting for future periods.

The results of the study indicate that small group claim costs are significantly higher for guarantee-issue than for underwritten business. Also, claim costs tend to vary significantly by group size and preexisting-condition limitation.

1. Underwriting Approach (Table 9)

Short-form and long-form underwriting data were combined to compare claim cost differences between underwritten and guarantee-issue business. The study data show long-form underwriting claim costs to be higher than short-form claim costs. However, this comparison is inconclusive, since short-form and long-form underwriting data were primarily submitted by different companies. Therefore, the difference in claim cost may reflect company differences in target markets, administrative practices, and many other factors. As with the analysis of variation by duration, contracts with no preexisting-condition limitation have been excluded for purposes of comparing adjusted claim costs by underwriting approach.

As shown in Table 9, guarantee-issue claim costs are significantly higher than the underwritten claim costs for durations 1 through 3. Low exposure exists at the later durations, making comparisons difficult.

2. Group Size (Table 10)

Claim costs also varied significantly by group size. The experience for guarantee-issue policies and for policies with no preexisting-condition limitation are excluded from this analysis.

TABLE 9
MONTHLY ADJUSTED CLAIM COST
BY UNDERWRITING APPROACH

Duration Year	Underwriting	
	Long Form and Short Form	Guarantee Issue
1	\$ 83.39	\$102.57
2	120.39	180.68
3	139.69	176.93
4	137.95	159.15
5	152.71	167.70
6	155.36	166.47
7 +	154.43	128.37

TABLE 10
MONTHLY ADJUSTED CLAIM COSTS BY GROUP SIZE

Duration Year	Group Size				
	1	2-4	5-9	10-14	15-25
1	\$ 87.64	\$ 78.87	\$ 79.06	\$ 86.74	\$ 98.27
2	135.22	121.26	113.95	121.80	121.51
3	149.11	142.10	125.78	151.89	152.03
4	138.36	134.87	131.13	143.57	173.80
5	173.89	152.96	147.72	163.00	129.35
6	175.71	153.50	153.22	141.96	166.02
7 +	177.84	154.80	141.74	154.17	169.69

The monthly incurred claim costs exhibit a U-shaped pattern by group size. The claim costs for one-employee groups are relatively high, with 5-9 employee groups exhibiting the lowest costs. Claim costs then climb for 10-14 and 15-25 employee groups. This effect may be due to more restrictive marketing and underwriting practices as groups become smaller. Even with these practices, however, adverse selection appears to be increasing the claim costs for one-employee groups.

3. Preexisting-Condition Limitation (Table 11)

The claim costs by preexisting-condition limitation are summarized in Table 11. Guarantee-issue business was excluded from this analysis.

TABLE 11
MONTHLY ADJUSTED CLAIM COST
BY PREEXISTING-CONDITION LIMITATION

Duration	Preexisting-Condition Limitation	
	None	12 Months
1	\$ 81.71	\$ 83.39
2	127.23	120.39
3	167.76	139.69
4	141.15	137.95
5	183.46	152.71
6	190.26	155.36
7+	73.23	154.43

In general, the claim costs during the first two durations appear to be fairly consistent between the two preexisting-condition limitations. However, the no preexisting-condition limitation claim costs are significantly higher at the later durations.

TASK FORCE REPORTS OF THE COMMITTEE ON VALUATION AND RELATED AREAS*

PREFACE

This section presents the five task force reports of the Committee on Valuation and Related Areas, as follows:

- I. C-1 Task Force† Report: "Bond and Mortgage Loan Default Experience" and "Real Estate Loss Experience," by Irwin Vanderhoof, September 1987
- II. C-1 Task Force† Report: "A Cash-Flow Scenario Methodology for C-1 Risk: Preliminary Report," by Joseph J. Buff, October 1987
- III. C-3 Task Force‡ Report: "Modeling the C-3 Risk," by Stanley B. Tulin and Peter B. Deakins, September 1987
- IV. C-3 Task Force‡ Report: "The Impact on the C-3 Risk of Combining Lines of Business," by Peter B. Deakins, January 25, 1988
- V. "Combination of Risks Task Force§ Report," by Michael E. Mateja, April 1987.

Discussions of these reports as well as of any experience study are encouraged.

*Robert W. Stein (Chairperson), Donald D. Cody, Solomon Goldfinger, James C. Hickman, Robert D. Hogue, Donald M. Keith, W. James MacGinnitie, Michael E. Mateja, Daniel J. McCarthy, Carl R. Ohman, Robert D. Shapiro, Edward S. Silins, Stanley B. Tulin, and Irwin T. Vanderhoof.

†Irwin T. Vanderhoof (Chairperson), Faye Albert, Aaron Tenenbein, and Ralph F. Verni.

‡Stanley B. Tulin (Chairperson), Robert J. Matczak (Vice-Chairperson), Thomas A. Bickerstaff, Robert P. Clancy, Peter B. Deakins, J. Helmut Engels, James A. Geyer, Paul F. Kolkman, William H. Mawdsley III, Carl R. Ohman, Terrence M. Owens, James A. Tilley, and Michael R. Tuohy.

§Michael E. Mateja (Chairperson), William A. Carroll, James A. Geyer, Steven D. Meyers, Stephen L. Smith, and Donald R. Sondergeld.
