## **Predictive Modeling of Storm Damage to Overhead Power Lines**

*Brian Hartman*

University of Connecticut, USA; [brian.hartman@uconn.edu](mailto:brian.hartman@uconn.edu)

The past few years, many storms have knocked out the power in Connecticut. With a group in the environmental engineering department and the support of the local utility, we are building models to predict damage from future storms and help the utility properly manage their risk. In this presentation I will discuss our current models, storms we predicted well, others where we did poorly, and our current work to improve.
