

**TRANSACTIONS OF SOCIETY OF ACTUARIES
1985-87 REPORTS**

**REPORT OF THE COMMITTEE
ON LIFE INSURANCE EXPECTED EXPERIENCE
OF THE CANADIAN INSTITUTE OF ACTUARIES**

**MORTALITY UNDER CANADIAN
STANDARD ORDINARY INSURANCE ISSUES STUDIED
BETWEEN THE 1986 AND 1987 ANNIVERSARIES**

PREFACE

This report was prepared by the Committee on Life Insurance Expected Experience of the Canadian Institute of Actuaries. The Canadian Institute of Actuaries has given the Society of Actuaries permission to reproduce this report as part of the Society's expansion of its experience studies. Discussions of this report as well as of any experience study are encouraged. The Canadian Institute and the Society intend to cooperate in experience studies to benefit actuaries in both Canada and the United States.

1. INTRODUCTION

This is the 38th annual report submitted by the Committee on Life Insurance Expected Experience (formerly Expenses, Morbidity and Mortality Committees) on the intercompany mortality experience for Canadian Standard Ordinary Life insurance policies. The CA 69-75 mortality tables are used to calculate the expected death claims separately for males and females. For data submitted without classification by sex, the male table was used.

2. TABLES

- The following tables comprise the results of the 1986-87 mortality study:
- Table 1 The total experience analyzed for the select period by groups of duration and by groups of ages at issue; for the ultimate period by groups of attained ages.
 - Table 2 As for Table 1, but further classified by: (a) males and (b) females.
 - Table 3 As for Table 1, but further classified as follows (select period only): (a) medical males, (b) medical females, (c) nonmedical males, (d) nonmedical females, (e) paramedical males, and (f) paramedical females.
 - Table 4 Mortality ratios by amount for policy years 1978-79 through 1986-87 based on the expected CA 69-75 Tables.
 - Table 5 The variation of the experience of the individual companies from the overall mortality ratio for the total intercompany experience.

- Table 6 Analysis of the total intercompany experience for various classes in broad groups of policy years and ages at issue or attained ages.
- Table 7 Analysis of the amount of death claims by cause of death.
- Table 8 Analysis of data split by smoking habits.
- Table 9 A table showing the total data split by type of insurance.

Additional detailed data, showing mortality ratios by quinquennial age groupings, are available and can be obtained by writing to the Chairman of the Committee on Life Insurance Expected Experience of the CIA.

3. COMMENTS ON DATA FROM CONTRIBUTING COMPANIES

The 1986-87 study is based on the data of 18 contributing companies, one fewer than last year; one new company has joined the study while two companies are temporarily unable to submit data.

Contributors	Exposures
Assurance-vie Desjardins	1.01%
Canada Life	4.12
Confederation Life	3.02
Crown Life	3.29
Equitable Life	0.64
Great-West Life	5.10
Industrial-Alliance	11.64
London Life	15.88
Manufacturers Life	4.50
Metropolitan Life	5.14
Mutual Life	14.79
National Life	3.64
New York Life	3.74
North American Life	5.13
North-West Life	0.70
Prudential Assurance	1.58
Prudential Insurance of America	4.13
Sun Life	<u>11.95</u>
Total exposures	100.00%

A comparison of total exposures and death claims with previous years is as follows:

	1984-85 Study	1985-86 Study	1986-87 Study
Exposures			
By Number	6,517,652	6,942,570	6,929,713
By Amount ('000)	133,534,383	158,094,377	164,875,777
Death Claims			
By Number	31,459	36,296	35,901
By Amount ('000)	260,212	285,830	285,047

4. OTHER COMMENTS

(a) In Table 1, the column entitled S.D. provides estimates of the standard deviation of the ratios of actual to expected numbers of deaths. These numbers measure the degree of confidence which may be placed in the ratios experienced. The formula used to calculate the standard deviations is as follows:

$$\text{S.D.} = \frac{(\text{Actual } \# \text{ of deaths})^{1/2}}{\text{Expected } \# \text{ of deaths}}$$

(b) The average sum assured for the exposures has been steadily increasing as follows:

	1982-83	1983-84	1984-85	1985-86	1986-87
Males	20,226	21,539	23,400	25,700	26,493
Females	11,752	13,335	14,910	17,448	18,836
Combined	17,504	18,829	20,488	22,770	23,792

The following shows the trend in the average amount of claims over the last five years:

	1982-83	1983-84	1984-85	1985-86	1986-87
Average Claim	6,862	6,833	8,271	7,875	7,940

(c) In Table 2C, the number of policies with sex not known fell from 26,849 to 1,695.

(d) From Table 3, we note that paramedical results for males are slightly better than medical, which in turn are better than nonmedical.

(e) Table 4 shows the comparison of actual to expected ratios for the last nine years. The mortality rates generally have declined over this period.

(f) The following shows the percentage of death claims (by amount) for the main cause of death groupings:

	Policy Years		
	1-5	6-15	16 and over
Motor Vehicle and Other Accidents and Homicides	21.9%	15.6%	4.0% (86-87)
	22.4	12.6	3.8 (85-86)
	31.5	15.5	4.2 (84-85)
Diseases of the Heart and Circulatory System	17.0	21.4	38.4 (86-87)
	18.6	25.0	32.0 (85-86)
	15.9	28.9	35.1 (84-85)
Malignant Neoplasms	32.7	37.9	27.6 (86-87)
	28.8	32.4	24.1 (85-86)
	20.8	29.0	26.7 (84-85)
AIDS—No Report			

(g) The following select ratios by amount for smokers and nonsmokers were extracted from Table 8 of the 1986-87 study (with the comparable ratios from the previous year shown in brackets).

	A/E	Expected Deaths ('000)	
		Male and Female	Male and Female
Smokers	94.4 (117.5)	\$23,861	(20,515)
Nonsmokers	58.6 (54.2)	66,075	(62,179)
Nonclassified	78.3 (75.7)	132,034	(126,121)

Also from Table 8, we find that the ratio of smokers to nonsmokers by number for total select is 211% compared with 190% last year, but by amount, the similar ratio is 162% compared with 216% last year.

(h) In Table 9, the ratio of actual to expected for Term Riders is less than for Term, which in turn is less than for Permanent in both the current and previous study years.
