## EXECUTIVE SUMMARY

The objectives of this research project sponsored by the Society of Actuaries are to “document the identification, management and mitigation of the risks with which health actuaries need to contend.”<sup>i</sup> Interviews were conducted with ten large U.S. health insurance companies to identify their key risks and to rank the key risks using likelihood and severity estimates. For the top-20 key risks, the carriers were asked to identify the key risk indicators (KRIs) they use for monitoring and the activities they use, or plan to use, to mitigate the likelihood of occurrence and/or the severity of impact.

Given the timing of this study, it is not surprising that many of the key risks identified were connected to the Affordable Care Act (ACA) implementation, regulatory review of rates, and changes in reimbursement to government-funded programs such as Medicare Advantage and Medicaid. At the time of this study, companies were actively involved in planning for the implementation of major components of the ACA in 2014. The first set of interviews was conducted in late March and April of 2012, and the second set of interviews was conducted in August of 2012. Thus, the first set of interviews was conducted prior to the June 28<sup>th</sup> Supreme Court decision concerning the ACA, while the second set of interviews was conducted after the Supreme Court decision. All work on the report was done prior to the November 2012 Presidential election, during a time when a great deal of controversy and uncertainty existed concerning implementation of the ACA. In addition, there was a great deal of political uncertainty concerning federal and state budgetary pressures on programs such as Medicare and Medicaid.

The top five risks identified were:

1. State and/or Federal regulators do not approve actuarially justified rate increases.
2. Pricing assumptions not realized due to unexpected behaviors of state exchange regulators and consumers.
3. Federal budget pressures result in reduction of reimbursements for Medicare Advantage
4. State exchanges commoditize the market resulting in a loss of market share
5. Mispricing medical trend

There were 45 risks identified. Appendix A provides a compilation of all 45 of these risks and their relative rankings. Of the 45 risks, 11 (24%) were connected to the ACA.<sup>ii</sup> There were eight (18%) risks connected to Medicare and Medicaid programs.<sup>iii</sup> Increased regulatory scrutiny, and the associated actions, such as the number one risk above, accounted for five (11%) of the risks identified.<sup>iv</sup> Trend issues (such as number five above) accounted for five (11%) of the risks.<sup>v</sup>

The most popular risk category, representing 80% of the key risks identified, was strategic risk. This is consistent with industry studies on sources of risk. However, this often surprises insurance companies that have not yet conducted a thorough and formal qualitative risk assessment and have been instead focusing most of their ERM efforts on financial and insurance risks.

The Key Result Indicators (KRIs) were identified for the top 20 risks and consolidated. (See the table on page 12 and Appendix B). There was a great deal of consistency among carriers. KRIs mentioned frequently included:

- Changes in the political/regulatory environment from news releases or industry association releases
- Emerging results such as loss ratios, financial results and trend reporting and analyses

- Information on competitors from publicly available rate filings, earnings reports, and industry studies such as HCCI.

Mitigation techniques are those that will reduce the likelihood or severity of the identified risk. These were also identified for the top 20 risks, and as with the KRIs, there were similarities between the companies' responses. (See the table on page 12 and Appendix B).

The most common mitigation actions were:

- Carriers with broader product lines and in diverse geographic areas, identified diversification or selective participation in exchanges by state or product or customer segment as mitigating actions
- Communication with regulators and legislators
- Improved rate filings and pricing changes
- Plan design changes
- Provider contracting and network changes
- Increased medical management
- Expense management

The researchers' recommend that Enterprise Risk Management be an ongoing research topic, with a study similar to this one conducted periodically, since the health care risks will vary greatly with the economic and political environment, as well as new medical advances. We also recommend that Enterprise Risk Management for Health Insurance continue to be a part of both basic and continuing education for health actuaries.

## **PARTICIPATING COMPANIES**

Ten U.S. health insurance companies participated in this research study. The authors wish to thank these companies for their assistance and valuable input. This study would not have been possible without their contributions of time and knowledge.

## **PROJECT OVERSIGHT GROUP**

The authors would also like to thank Steve Siegel from the Society of Actuaries and the volunteers in the Project Oversight Group who provided valuable guidance and input. The members of the Project Oversight Group were Jeffrey Allen, Joan Barrett, Patrick Collins, Robert Hanes, Rafi Herzfeld, Trevor Pollitt, Bernie Rabinowitz, Sudha Shenoy and Robert Wolf.

## **APPROACH**

The research was structured in two parts:

- A. Identify and rank key risks
- B. Identify key risk indicators (KRIs) and mitigation

### **A. Identify and Rank Key Risks**

We conducted a qualitative risk assessment interview to identify and rank each organization's key risks. We used the value-based ERM approach, as outlined in Sim Segal's book *Corporate Value of Enterprise Risk Management*, modified for use across multiple companies (as opposed to use within a single enterprise, as is more common in ERM). This involved four stages:

1. Identify qualitative risk assessment survey participants
2. Provide advance communication
3. Conduct qualitative risk assessment interviews
4. Conduct consensus scoring

#### ***1. Identify Qualitative Risk Assessment Survey Participants***

We invited each company to have two representatives participate in the qualitative risk assessment survey: the chief actuary and the chief risk officer or equivalent head of the ERM program. Chief actuaries or actuaries involved in ERM programs attended all 10 interviews. Chief risk officers or equivalent heads of the ERM program attended seven of the 10 interviews.

#### ***2. Provide Advance Communication***

We provided an advance communication to each company. The advance communication provided guidance on the type of information to provide. This included some background on, and definitions of terms used in, the value-based ERM approach; this helped to enhance the consistency of results, since ERM approaches and definitions typically vary across companies. The advance communication provided guidance on the following:

- Input needed from participants
- Definition of key risk
- Categories of risk
- Specifying a scenario
- Defining risks by source
- Scoring criteria
- Sample risk categorization and definition tool

### Input needed from participants

We asked survey participants to prepare to provide the following information during the qualitative risk assessment survey (each of these items is further defined below):

- The key risks to their organization
- For each key risk, the credible-worst-case scenario
- For each key risk, as manifested by its credible-worst-case scenario:
  - Likelihood score
  - Severity score

### Definition of key risk

We defined key risks as those that, if they were to occur, would have a large negative impact on company value, where company value, while somewhat analogous to market capitalization, is an internal valuation calculated as the present value of distributable cash flows (where distributable cash flows are fairly close to post-tax statutory earnings less the increase in required capital) that would result if the strategic plan were to be perfectly achieved.

One reason to use value as the single severity metric is that, for corporate entities, it is the only metric that fully captures the impacts of all types of risk. Whether the largest impact of a risk is a decrease in revenues, or an increase in expenses, or a balance sheet impact or an increase in the cost of capital, the value metric reflects all such impacts, and accounts for them in the correct time-value-discounted proportion. Another reason to use the value metric as the severity metric is that this allows the most direct comparisons between risks and also between companies.

### Categories of risk

We specified that all risk categories should be considered when selecting the key risks. Risk categories include: strategic risks (e.g., strategic execution risk, competitor risk, regulatory risk, etc.); operational risks (e.g., technology risk, human resources risk, disaster risk, etc.); financial risk (e.g., market risk, credit risk, etc.); and insurance risk (e.g., mispricing, under-reserving, etc.).

Many financial services companies focus the majority of their efforts on financial and insurance risks. However, industry studies show that the vast majority of the volatility of results arises from strategic and operational risks rather than from financial and insurance risks. In addition, management does not care from where an unexpected event arises that results in the failure to achieve strategic plan expectations...management simply doesn't want such surprises; therefore, ERM must include all categories of risk in its scope, and in a consistently-thorough manner.

### Specifying a scenario

We advised against attempting to estimate likelihood and severity for a broad "risk." Each risk may have a wide variety of risk scenarios and each survey participant might be imagining a different one when

providing their assessment. This distorts the results. Rather, to enhance the level of consistency in scoring, to the extent possible, it is preferable to specify a “credible-worst-case scenario” for the risk, and then provide likelihood and severity scores on that scenario. A credible-worst-case scenario is something that is rare and severe but still something that is a reasonable concern. For example, for a data breach involving privacy-related data, the credible-worst-case scenario might be a data breach involving a deliberately stolen set of unencrypted data comprised of a specific percentage of all current policyholders’ privacy-related data.

Defining risks by source

We indicated that risks should be identified by their originating source. Often, companies inconsistently define risks – some are defined by source and some by outcome. For example, “reputation risk” or “ratings downgrade risk” are both examples of risks improperly defined by outcome. There are multiple independent sources of risk that can trigger each of these, and each different source of risk should be identified and qualitatively scored separately, again, to avoid inconsistencies in the variations that survey participants are imagining when they provide their scores.

Scoring criteria

We provided the following scoring criteria:

Likelihood	Chance of Occurring Within 2012-2014	Severity	Loss in Company Value
Very High	≥20%	Very High	≥10%
High	≥10% but <20%	High	≥2.5% but <10%
Medium	≥5% but <10%	Medium	≥1.0% but <2.5%
Low	≥1% but <5%	Low	≥0.5% but <1.0%
Very Low	<1%	Very Low	<0.5%

The likelihood specifies the chance of the risk event initiating with the 2012-2014 period. This was intended to reflect the fact that, at the time this survey was conducted, a major factor affecting the risks for U.S. health insurance companies was the Affordable Care Act, whose implications were expected to unfold over the 2012-2014 period. While the likelihood specified the chance of the risk event initiating within the 3-year period, the severity is intended to capture all future downstream impacts of the event, should it occur, regardless of time period.

Sample risk categorization and definition tool

We provided a summary-level risk categorization and definition tool for participants to review in advance of the qualitative risk assessment survey. A risk categorization and definition tool is not intended as a comprehensive list (it is only a sample/partial list), or as a checklist, but rather as a generic

high-level summary of some prominent risk categories and sub-categories, intended to illustrate both the broad range of risk types that are in scope for the qualitative risk assessment and the approach to defining risks by their source. The precise positioning of a risk sub-category within a specific category is not particularly important, since that varies company-to-company; rather, the holistic consideration of all risk types is paramount. For examples of risk categorization and definition tools, see Chapter 4 of *Corporate Value of Enterprise Risk Management*.

### **3. Conduct Qualitative Risk Assessment Interviews**

We conducted phone interviews with survey participants to collect the key risks, the credible-worst-case scenarios, and the likelihood and severity scores. We allotted 90 minutes to each interview, although not all interviews required the full allotted time. We provided interactive guidance to interviewees on providing risks that fit our ERM approach, such as ensuring that risks were properly defined by source.

These interviews were conducted during late March and April 2012. During this timeframe, companies were actively involved in planning for the implementation of the major provisions of the ACA in January of 2014. Thus, it is not surprising that many of the identified risks were connected with the regulatory environment and the many unknowns about how states would implement the ACA provisions.

We received from four to twelve risks from each company, with the majority providing five risks.

In addition, the interviews were conducted in a way that protected the anonymity of the survey participants. Only the two consultants conducting the interviews had knowledge of which survey participants provided which risks. Following the individual interviews, the information was aggregated.

### **4. Conduct Consensus Scoring**

The consensus scoring was performed in four steps:

1. Consolidation
2. Review
3. Scoring
4. Finalizing results

#### **1. Consolidation**

We consolidated the total list of key risks collected from all survey participants, eliminating similar or duplicate items. The initial list of key risks collected was 67 risks and this was consolidated down to 45 risks. Then one risk was eliminated when the Supreme Court decision on the ACA was announced on June 28, 2012. That particular risk was no longer relevant because of the final Supreme Court decision, resulting in 44 risks.

#### **2. Review**

The SOA Project Oversight Group (POG) for this research reviewed the consolidated list of risks. All of the risks were confirmed without change, with one exception: the POG added one risk to the list

because of the June 28<sup>th</sup> Supreme Court decision: “Various states do not implement Medicaid expansion.”

### 3. Scoring

The final consolidated list of risks, including the one addition by the POG, was circulated to the original survey participants, with a request to provide likelihood and severity scores (using the same guidance and scoring criteria as earlier) for each risk, or to provide “not applicable” where warranted (e.g., the risk related to business that is not a part of the company’s product portfolio).

### 4. Finalizing Results

We finalized the results of the qualitative risk assessment by taking the average of the likelihood scores and the average of the severity scores, when scores were provided (we ignored blanks and not applicables). To facilitate the averaging, we used the following values as proxies for the numerical midpoint of the scoring ranges; the midpoint not being available for the upper range, we simply used 25% above the lower bound of the upper range as the midpoint.

<b>Likelihood Range</b>	<b>Proxy for Likelihood Range Midpoint</b>	<b>Severity Range</b>	<b>Proxy for Severity Range Midpoint</b>
Very High (≥20%)	25.00%	Very High (≥10%)	12.500%
High - Very High	20.00%	High - Very High	9.375%
High (≥10% but <20%)	15.00%	High (≥2.5% but <10%)	6.250%
Medium - High	11.25%	Medium - High	4.000%
Medium (≥5% but <10%)	7.50%	Medium (≥1.0% but <2.5%)	1.750%
Low - Medium	5.25%	Low - Medium	1.250%
Low (≥1% but <5%)	3.00%	Low (≥0.5% but <1.0%)	0.750%
Very Low - Low	1.75%	Very Low - Low	0.500%
Very Low (<1%)	0.50%	Very Low (<0.5%)	0.250%

We calculated an overall combined score, for ranking the risks, by multiplying the average likelihood and the average severity.

It should be noted that given that the ten carriers in our study have very different characteristics with respect to the states they cover, the customer segments served, and the products offered, the range of results for both likelihood and severity was broad. We believe that using the averages appropriately

adjusted for these differences. However, numerous other methods could have been used to consolidate the risks and to rank them. For example, another method might have been to exclude the lowest and highest responses for each risk and then use the average of the remaining eight responses. We decided not to use this alternate approach given that we would have then had only eight responses to use in the calculation of the average.

### **B. Identify Key Risk Indicators (KRIs) and Mitigation**

In the second part of the research, we conducted a second set of interviews with participating companies to identify, for each of the top-20 key risks identified in the first part of the research:

- Which key risk indicators (KRIs) they used (KRIs are leading indicators used to monitor the emergence of each risk); and
- What mitigation actions they used, or planned to use, or may optionally use, for each risk (mitigation is actions taken to lower the likelihood and/or severity of the risk)

As in the first part of the research, we conducted phone interviews with survey participants to collect this information. The participating interviewees were similar to those in the first part of the research, with some exceptions where additional individuals with more specific information were included. We allotted 90 minutes to each interview, although not all interviews required the full allotted time. We provided interactive guidance to interviewees on providing specific KRIs and on clarifying specific actions associated with mitigation. These interviews were conducted during August 2012.

In addition, as in the first part of the research, the interviews were conducted in a way that protected the anonymity of the survey participants. Only the two consultants conducting the interviews had knowledge of which survey participants provided which KRIs and mitigation. Following the individual interviews, the information was consolidated to remove exact or near duplicates.

## RESULTS

The 45 consolidated risks identified by these ten health insurance companies are shown in Appendix A.

The top five risks were:

1. State and/or Federal regulators do not approve actuarially justified rate increases.
2. Pricing assumptions not realized due to unexpected behaviors of state exchange regulators and consumers.
3. Federal budget pressures result in reduction of reimbursements for Medicare Advantage.
4. State exchanges commoditize the market resulting in a loss of market share
5. Mispricing medical trend.

Given the timing of this study, in the midst of carriers preparing for the implementation of major portions of the ACA in January 2014, it is not surprising that many of the risks involved the ACA. The following table provides a distribution of the 45 risks:

Type of Risk	Number of Risks	Percent of total
ACA related <sup>ii</sup>	11	24%
Medicaid/Medicare related <sup>iii</sup>	8	18%
Increased regulatory scrutiny <sup>iv</sup>	5	11%
Trend <sup>v</sup>	5	11%
Other	16	36%

As mentioned in the “Categories of risk” description on page 6, we specified that all risk categories should be considered, including strategic risks, operational risks, financial risk and insurance risk. The most popular risk category, representing 80% of the key risks identified, was strategic risk. This is consistent with industry studies on sources of risk. However, this often surprises insurance companies that have not yet conducted a thorough and formal qualitative risk assessment and have been instead focusing most of their ERM efforts on financial and insurance risks.

The researchers and the Project Oversight Group were surprised that there was little mention of operational risks. The timing of the study and the focus of most companies on the implications of the ACA probably explains this.

For the top 20 risks, each of the carriers was asked to provide KRIs and Mitigation actions. Given the diversity of the companies as to size, geographic presence, and products and customer segments served, the KRIs and Mitigation actions showed many similarities. The KRIs and Mitigation actions are shown in Appendix B, and a summary is provided in the following table.

Type of Risk	Key Risk Indicators	Risk Mitigation Techniques
ACA related <sup>ii</sup>	<ul style="list-style-type: none"> <li>• Potential changes in rules or regulations from press releases, industry association releases, government releases</li> <li>• Emerging results <ul style="list-style-type: none"> <li>○ Actual vs. expected</li> <li>○ Enrollment</li> <li>○ Loss ratios</li> <li>○ Sales</li> <li>○ Trend reporting and analyses</li> </ul> </li> <li>• Rate filing information</li> <li>• Competitor information such as financial performance and pricing</li> <li>• Forecasts and predictive modeling</li> <li>• Market research</li> </ul>	<ul style="list-style-type: none"> <li>• Communication with regulators/legislators</li> <li>• Product/process changes <ul style="list-style-type: none"> <li>○ Plan design changes</li> <li>○ Ability to react quickly</li> <li>○ Improve ASO offerings</li> <li>○ Improve retail experience</li> </ul> </li> <li>• Network changes and provider management</li> <li>• Medical management</li> <li>• Pricing changes</li> <li>• Improved rate filings</li> <li>• Expense management</li> <li>• Marketing</li> <li>• Selective participation by state and product</li> </ul>
Medicaid related <sup>iii</sup>	<ul style="list-style-type: none"> <li>• Emerging results <ul style="list-style-type: none"> <li>○ Actual vs. expected</li> <li>○ Loss ratios</li> <li>○ Enrollment</li> </ul> </li> <li>• Databook information</li> <li>• Potential changes in rules/regulation</li> <li>• Competitor information such as financial results of Medicaid carriers</li> </ul>	<ul style="list-style-type: none"> <li>• Medical management</li> <li>• Expense management</li> <li>• Communication with regulators/legislators</li> <li>• Selective participation by state</li> <li>• Long term view in setting rates</li> <li>• Provider contracting and network management</li> </ul>

Type of Risk	Key Risk Indicators	Risk Mitigation Techniques
Medicare related <sup>iii</sup>	<ul style="list-style-type: none"> <li>• Potential changes in regulation/reimbursement</li> <li>• Emerging results               <ul style="list-style-type: none"> <li>○ Actual vs. expected</li> <li>○ Forecasts</li> </ul> </li> <li>• STAR information</li> </ul>	<ul style="list-style-type: none"> <li>• Provider contracting and network changes and provider management</li> <li>• Improve medical management</li> <li>• Improve STAR ratings</li> <li>• Expense management</li> <li>• Pricing changes</li> <li>• Communication with regulators/legislators</li> <li>• Selective participation by geography</li> </ul>
Increased regulatory scrutiny <sup>iv</sup>	<ul style="list-style-type: none"> <li>• Rate filing information</li> <li>• Political/regulatory environment</li> <li>• Emerging results               <ul style="list-style-type: none"> <li>○ Loss ratios</li> <li>○ Trend increases</li> </ul> </li> <li>• Financial forecasts</li> </ul>	<ul style="list-style-type: none"> <li>• Communicate with regulators/legislators</li> <li>• Better rate filings</li> <li>• Medical management</li> <li>• Provider contracting changes</li> <li>• Process improvement</li> <li>• Selective participation in states and market segments</li> <li>• Revised pricing</li> </ul>
Trend <sup>v</sup>	<ul style="list-style-type: none"> <li>• Emerging results               <ul style="list-style-type: none"> <li>○ Loss ratios</li> <li>○ Financials</li> <li>○ Trend reporting and analyses</li> </ul> </li> <li>• Competitor information from earnings reports, rate filings, HCCI data, etc.</li> <li>• Provider information</li> </ul>	<ul style="list-style-type: none"> <li>• Medical management</li> <li>• Product/process changes               <ul style="list-style-type: none"> <li>○ Plan design changes</li> <li>○ Diversity of products</li> </ul> </li> <li>• Network changes and provider management</li> <li>• Adjust pricing</li> <li>• Diversification by state</li> </ul>

**Appendix A: Key Risks Common to Health Insurance Companies**

Rank	Category	Subcategory	Division	Risk	Average Likelihood	Average Severity	Combined Score
1	Strategic	Regulatory	Regulatory practices	State and/or Federal regulators do not approve actuarially justified rate increases	16.86%	5.50%	0.927%
2	Insurance	Pricing		Pricing assumptions not realized due to unexpected behaviors of state exchange regulators and consumers	20.83%	3.83%	0.799%
3	Strategic	Economic		Federal budget pressures result in reduction of reimbursements for Medicare Advantage	15.83%	4.56%	0.721%
4	Strategic	Strategy	Channel-related and Market-related	State exchanges commoditize the market resulting in a loss of market share	12.86%	4.75%	0.611%
5	Insurance	Pricing		Mispricing medical trend	10.68%	5.59%	0.596%
6	Insurance	Pricing		ACA stays in place as is, and antiselection results in our attracting more than our fair share of poor risks	11.81%	4.86%	0.574%
7	Strategic	Regulatory	New regulation	Regulatory changes (ACA) result in larger-than-expected rate increases by all carriers leading to a public backlash against the healthcare market resulting in regulatory actions and/or rate increase restrictions	16.56%	3.31%	0.548%
8	Strategic	Strategy execution	Product/services-related	Inadequate medical cost management	8.23%	6.35%	0.522%
9	Strategic	Regulatory	New regulation	The ACA or a replacement health care reform law creates a change from an employer-based market to an individual market impacting capital requirements, market share, and profitability	12.60%	4.00%	0.504%
10	Strategic	Strategy execution	Market-related	Loss of large account/accounts	13.13%	3.61%	0.474%
11	Strategic	Competitor	Competitor action	Competitors (such as other carriers, ACOs, other provider organizations, etc.) negotiate for better medical provider unit costs	9.23%	4.68%	0.431%
12	Strategic	Strategy execution	Product-related	Loss of small group market share as small groups drop employer-sponsored coverage	12.17%	3.34%	0.407%

Rank	Category	Subcategory	Division	Risk	Average Likelihood	Average Severity	Combined Score
13	Strategic	Regulatory	New regulation	Legislative or regulatory actions result in dysfunctional markets in a few states, post-ACA	12.69%	3.13%	0.397%
14	Insurance	Pricing		Inaccurate pricing of Medicaid business in states that have not previously had managed care programs	12.16%	3.22%	0.391%
15	Strategic	Regulatory	New regulation	Impact of insurer fee assessments on different carriers and products changes pricing structure disadvantageously versus certain competitors	12.86%	3.03%	0.390%
16	Strategic	Economic		State budget pressures result in Medicaid rates that are not actuarially justified	11.63%	3.28%	0.381%
17	Strategic	Competitor	Competitor action	Aggressive competitor pricing results in loss of market share	10.70%	3.43%	0.366%
18	Insurance	Pricing		Misunderstanding of the post-ACA market's risk profile results in overpricing and a resultant loss of market share	9.08%	3.63%	0.329%
19	Strategic	Regulatory	Licenses/permissions	Changes to the STAR rating system results in lower-than-expected bonus reimbursements for Medicare Advantage	11.28%	2.86%	0.323%
20	Strategic	Competitor	Competitor action	Multiple competitors aggressively price in an unsustainable manner resulting in temporary loss of business or compression of margins	10.17%	3.03%	0.308%
21	Strategic	Strategy formulation	Market-related	Product strategy does not accurately reflect the new environment brought about by the ACA, resulting in a slow-to-react response causing a loss of market share	9.03%	3.34%	0.302%
22	Strategic	Strategy execution	Market-related	Failure to fully execute the growth strategy to penetrate targeted markets	10.63%	2.78%	0.295%
23	Strategic	Regulatory	New regulation	Worse-than-expected complexity of administration due to the ACA resulting in state-by-state variations	16.14%	1.78%	0.287%
24	Strategic	Regulatory	Regulatory practices	Changing compliance environment in Medicare Advantage and Part D markets results in growth limitations due to limits on product expansion and new business sanctions in some large markets	11.33%	2.50%	0.283%
25	Strategic	Strategy formulation	Product/services-related	Inability to differentiate our products/solutions in the marketplace	7.83%	3.41%	0.267%

Rank	Category	Subcategory	Division	Risk	Average Likelihood	Average Severity	Combined Score
26	Strategic	Regulatory	Regulatory practices	Unexpected increase in state regulatory scrutiny and associated requirements	13.50%	1.75%	0.236%
27	Strategic	Regulatory	Regulatory practices	Pricing constraints in rating reforms leads to loss of better risks and/or loss of volume of business	10.75%	2.13%	0.228%
28	Strategic	Strategy execution	Product/ services innovation	Data analytics not keeping pace with those of competitors leading to poorer-than-expected benefits of customer segmentation, marketing, acquisition, and execution of behavioral incentives	9.53%	2.31%	0.220%
29	Strategic	Regulatory	Regulatory practices	State regulations impose upper limits on insurance company capital requiring excess capital be refunded or used to lower premiums	8.61%	2.53%	0.218%
30	Strategic	Industry practices		Allegations of inappropriate industry practices result in media coverage and new regulations which increase the levels of scrutiny and costs	8.53%	2.50%	0.213%
31	Insurance	Pricing		Upcoding accompanying the conversion of ICD-9 to ICD-10 results in claim costs worse than expected	8.65%	2.38%	0.205%
32	Insurance	Pricing		Hospital cost trend is higher than expected	8.20%	2.48%	0.203%
33	Strategic	Competitor	Competitor action	Competitors exit certain markets increasing antiselection yet our exiting the market is not viable (either because of the cost or political considerations)	8.00%	2.50%	0.200%
34	Strategic	Regulatory	Regulatory practices	Various states do not implement Medicaid expansion	13.22%	1.47%	0.194%
35	Operational	Disaster	Natural disaster	Epidemic (such as avian flu) occurs with severity 2-3 times worse than H1N1	3.55%	4.89%	0.174%
36	Strategic	Competitor	New entrant	A new type of competitor enters and disrupts the market	4.93%	3.50%	0.172%
37	Strategic	Economic		The economy experiences a double-dip recession	7.55%	2.18%	0.164%
38	Strategic	Strategy formulation	Product/ services-related	Unexpected increase in customer-related technology requirements	7.50%	2.06%	0.154%
39	Strategic	Strategy execution	Product/ services-related	Inability of I/T-supported customer service quality to keep pace with competitors resulting in loss of market share	9.10%	1.56%	0.142%

Rank	Category	Subcategory	Division	Risk	Average Likelihood	Average Severity	Combined Score
40	Strategic	Regulatory	Licenses/ permissions	CMS suspends the ability to take on new Medicare Advantage members for one year	3.33%	3.25%	0.108%
41	Strategic	M&A		Acquisition not meeting expectations (either in terms of lower revenues, higher expenses, unexpected liabilities, or lack of strategic fit)	4.59%	2.28%	0.105%
42	Strategic	Regulatory	New regulation	State regulations impose mandated benefits	15.53%	0.66%	0.102%
43	Strategic	M&A		Inability to execute growth strategy related to an acquisition involving a new area of expertise	3.78%	2.41%	0.091%
44	Strategic	Regulatory	New regulation	New state or federal government programs (unrelated to health care reform) result in lower-than-expected Medicaid reimbursements	7.22%	1.22%	0.088%
45	Insurance	Pricing		Pricing assumptions not realized for ancillary products (life, AD&D, LTD)	3.56%	1.58%	0.056%

## Appendix B: KRIs and Mitigation for Top-20 Risks Common to Health Insurance Companies

#	Risk	Key Risk Indicators	Risk Mitigation Techniques
1	State and/or Federal regulators do not approve actuarially justified rate increases	<ul style="list-style-type: none"> <li>• Rate filing information                             <ul style="list-style-type: none"> <li>○ Company and competitor rate filings</li> <li>○ Press releases from regulators regarding rate filings</li> <li>○ Database of company's rate filings</li> <li>○ Number of filings that are accepted without changes, accepted with changes, and withdrawn</li> <li>○ Management communication on all rate increases over 10%</li> </ul> </li> <li>• Political/regulatory environment                             <ul style="list-style-type: none"> <li>○ Political environment within a state</li> <li>○ Political issues identified by industry association</li> <li>○ Regulatory news</li> <li>○ Regulatory actions</li> <li>○ Regulator actions regarding rate filings</li> </ul> </li> <li>• Emerging results                             <ul style="list-style-type: none"> <li>○ Loss ratios</li> <li>○ Increases in trend – which causes concern that adequate rates will not be approved</li> </ul> </li> <li>• Quarterly financial forecasts</li> <li>• Unemployment, as indicator of economy</li> </ul>	<ul style="list-style-type: none"> <li>• Communicate with regulators/legislators (pre-event)                             <ul style="list-style-type: none"> <li>○ Proactive discussions with regulators to discuss balance between adequacy, rate competitiveness, regulatory constraints, etc.</li> </ul> </li> <li>• Better rate filings                             <ul style="list-style-type: none"> <li>○ Provide more detail, with more documentation of benefit changes, fees, and other items</li> <li>○ Provide transparency regarding trend components</li> <li>○ Senior management involvement in rate filings</li> <li>○ Management scrutiny/signoffs prior to rate filings</li> <li>○ Independent review of filings</li> <li>○ Develop justifications for rates where experience is not credible (i.e. consider other than national experience in developing rates)</li> </ul> </li> <li>• Communicate with regulators/legislators (post-event)                             <ul style="list-style-type: none"> <li>○ Meet with regulators and actuaries to discuss and ask for more transparency on their decisions</li> <li>○ Request hearing</li> <li>○ Explain rate justification</li> <li>○ Negotiate for a final rate</li> </ul> </li> <li>• Pricing                             <ul style="list-style-type: none"> <li>○ Conclude not to proceed with the desired rate increases</li> <li>○ Ensure new products are properly priced (e.g. more difficult to get renewal increases approved)</li> <li>○ Legally implement rate increase, even if not approved by CMS</li> </ul> </li> <li>• Plan design changes</li> <li>• Medical management</li> <li>• Provider contracting changes</li> <li>• Where due to technical/data issues, continuous process improvement</li> <li>• Market actions                             <ul style="list-style-type: none"> <li>○ Be selective regarding participation in states and market segments</li> <li>○ Withdraw from that line of business</li> </ul> </li> </ul>

#	Risk	Key Risk Indicators	Risk Mitigation Techniques
2	Pricing assumptions not realized due to unexpected behaviors of state exchange regulators and consumers	<ul style="list-style-type: none"> <li>• Potential changes in regulations               <ul style="list-style-type: none"> <li>○ From public policy personnel relationships with regulators/legislators</li> <li>○ From direct meetings with regulators (e.g., how the exchange will be managed, such as how buyer guides rank plans)</li> </ul> </li> <li>• Exemptions to current rules by regulators</li> <li>• Emerging results               <ul style="list-style-type: none"> <li>○ Actual vs. expected for each assumption, by product and customer segment</li> <li>○ Actual vs. expected re risk distribution, product selection, behavior (such as pent-up demand)</li> <li>○ Enrollment mix, i.e., gender, age, product choice and/or geographic mix</li> <li>○ Monthly financial results vs. Plan</li> <li>○ Monthly trend reporting and analysis</li> <li>○ Sales by product and market</li> <li>○ Utilization experience</li> <li>○ Loss ratios</li> </ul> </li> <li>• Rate filing information               <ul style="list-style-type: none"> <li>○ Company and competitor rate filings</li> <li>○ Number of filings that are accepted without changes, accepted with changes</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Communicate with regulators/legislators               <ul style="list-style-type: none"> <li>○ Open communication with regulators</li> <li>○ Ask for transparency from regulators</li> <li>○ Maintain constant communication with regulators to understand their thinking</li> <li>○ Discuss assumptions with regulators</li> <li>○ Communicate findings of SOA study on cost of uninsured via public policy channels</li> </ul> </li> <li>• Product/process changes               <ul style="list-style-type: none"> <li>○ Develop more robust analytics to better identify differences between expected and actual</li> <li>○ Develop predictive analytics to enhance “expected” results</li> <li>○ Identify high risk individuals as early as possible and place in case management programs</li> <li>○ Plan design changes</li> <li>○ Redesign benefits</li> <li>○ Develop capacity to react quickly</li> <li>○ File new rates quarterly and reflect changes in filings</li> </ul> </li> <li>• Medical management</li> <li>• Network changes</li> <li>• Pricing changes               <ul style="list-style-type: none"> <li>○ Ensure new products are properly priced (more difficult to get renewal increases approved)</li> <li>○ Re-price as soon as possible</li> </ul> </li> <li>• Greater focus on rate increases               <ul style="list-style-type: none"> <li>○ Senior management involvement in rate filings</li> </ul> </li> <li>• Market actions               <ul style="list-style-type: none"> <li>○ More caution when we anticipate longer timeframe commitments for rates or slower response times for effecting rate changes</li> <li>○ Be selective regarding participation in states and market segments</li> <li>○ Diversify by state and product</li> </ul> </li> <li>• Better rate filings               <ul style="list-style-type: none"> <li>○ Provide more detail, with more documentation of benefit changes, fees, and other items</li> <li>○ Independent review of filings</li> </ul> </li> <li>• Expense management</li> </ul>

#	Risk	Key Risk Indicators	Risk Mitigation Techniques
3	Federal budget pressures result in reduction of reimbursements for Medicare Advantage	<ul style="list-style-type: none"> <li>• Potential changes in regulation/ reimbursement rates               <ul style="list-style-type: none"> <li>○ From public policy</li> <li>○ From industry associations</li> <li>○ News about budget talks and sequestration</li> <li>○ CMS announcements (continuous monitoring)</li> <li>○ Press releases</li> <li>○ Changes in Medicare payments</li> </ul> </li> <li>• News of political environment (e.g., votes)</li> <li>• Emerging results compared to long term projections               <ul style="list-style-type: none"> <li>○ For revenue, membership and claims</li> <li>○ Cost of Medicare Advantage vs. FFS Medicare</li> </ul> </li> <li>• Updated forecasts</li> <li>• Federal deficit</li> </ul>	<ul style="list-style-type: none"> <li>• Market actions               <ul style="list-style-type: none"> <li>○ Scale back in Medicare Advantage</li> <li>○ Modify mix between group and individual Medicare Advantage</li> <li>○ Select participation by geography</li> </ul> </li> <li>• Product/process changes               <ul style="list-style-type: none"> <li>○ Design provider contracts to pass through reimbursement changes to provider</li> <li>○ Plan design changes</li> <li>○ Provide good customer experience, particularly to seniors, through service and benefits (they would exert pressure if product is threatened)</li> <li>○ Take actions on provider rates, member contributions, and/or benefits</li> <li>○ Senior management review/approval of county-by-county bids</li> <li>○ Model different federal reimbursement levels versus trend assumptions and find offsets in cost structure</li> </ul> </li> <li>• Medical management</li> <li>• Network changes and provider management               <ul style="list-style-type: none"> <li>○ Use provider reimbursement methods to immunize margins</li> <li>○ More aggressive management of providers</li> <li>○ Revise provider contracting</li> </ul> </li> <li>• Expense management               <ul style="list-style-type: none"> <li>○ Control expenses better than competitors</li> </ul> </li> <li>• Pricing changes               <ul style="list-style-type: none"> <li>○ Increase premiums</li> </ul> </li> <li>• Communicate with regulators/legislators               <ul style="list-style-type: none"> <li>○ Advocacy by company</li> <li>○ Advocacy by industry organizations</li> <li>○ Increase quantity and quality of staff involved in advocacy</li> <li>○ Lobbying</li> </ul> </li> </ul>

#	Risk	Key Risk Indicators	Risk Mitigation Techniques
4	State exchanges commoditize the market resulting in a loss of market share	<ul style="list-style-type: none"> <li>• Potential changes in rules/regulation               <ul style="list-style-type: none"> <li>○ From public policy personnel</li> </ul> </li> <li>• Exchange information               <ul style="list-style-type: none"> <li>○ Exchange developments</li> <li>○ Rates for the exchange business</li> <li>○ Communication on how each Exchange is being developed</li> <li>○ Rules and regulations</li> </ul> </li> <li>• Internally-conducted surveys on expected consumer behavior</li> <li>• Emerging results               <ul style="list-style-type: none"> <li>○ Enrollment</li> <li>○ Early exchange enrollment trends (equivalent to exit polls)</li> <li>○ Lack of sales</li> <li>○ Market share</li> <li>○ Financial performance</li> <li>○ Change in retention of members/employers</li> </ul> </li> <li>• Results of modeling that include impact of assumptions as to competitors, subsidies to consumers</li> <li>• Competitor information               <ul style="list-style-type: none"> <li>○ Competitors' pricing for Exchange products</li> <li>○ Financial performance of competitors</li> </ul> </li> <li>• Degree to which there is a lack of product differentiation (e.g., proscribed offerings without variations)</li> </ul>	<ul style="list-style-type: none"> <li>• Product/process changes               <ul style="list-style-type: none"> <li>○ More creative product design &amp; development which includes a more granular understanding of consumer preferences</li> <li>○ Design a defined contribution offering</li> <li>○ Product differentiation</li> <li>○ Develop operational and technical excellence in reinsurance, risk corridors and risk adjustment to maximize revenue</li> </ul> </li> <li>• Expense management               <ul style="list-style-type: none"> <li>○ Lower cost operating model</li> <li>○ Reduce overhead</li> </ul> </li> <li>• Marketing               <ul style="list-style-type: none"> <li>○ Institutional advertising/marketing</li> <li>○ Revise marketing campaign</li> </ul> </li> <li>• Communicate with regulators/legislators               <ul style="list-style-type: none"> <li>○ Provide comments to regulators on rules and regulations</li> <li>○ Ensure state is able to accept changes quickly, and if not, be more cautious</li> <li>○ Develop advocacy positions</li> <li>○ Lobby the local regulators</li> <li>○ Work with regulators to adjust pricing, if permissible</li> </ul> </li> <li>• Pricing/products               <ul style="list-style-type: none"> <li>○ More aggressive pricing</li> <li>○ Understand timeframe and degree to which we can change rates and products</li> <li>○ Increased nimbleness to change our offerings quickly</li> </ul> </li> <li>• Market actions               <ul style="list-style-type: none"> <li>○ Be nimble regarding ability to enter/exit markets</li> <li>○ Be judicious in our selection of which markets to enter</li> <li>○ Diversification by state, customer segment, and funding type (insured vs. self-funded)</li> <li>○ Put only a fraction of the portfolio on the Exchange</li> </ul> </li> </ul>
