

2020 HEALTH VIRTUAL MEETING

ED CYMERYYS, FSA, MAAA
**Session 6, An Update from Leaders of Some of the Most
Innovative Companies in Silicon Valley**
June 9, 2020

SOCIETY OF ACTUARIES

Antitrust Compliance Guidelines

Active participation in the Society of Actuaries is an important aspect of membership. While the positive contributions of professional societies and associations are well-recognized and encouraged, association activities are vulnerable to close antitrust scrutiny. By their very nature, associations bring together industry competitors and other market participants.

The United States antitrust laws aim to protect consumers by preserving the free economy and prohibiting anti-competitive business practices; they promote competition. There are both state and federal antitrust laws, although state antitrust laws closely follow federal law. The Sherman Act, is the primary U.S. antitrust law pertaining to association activities. The Sherman Act prohibits every contract, combination or conspiracy that places an unreasonable restraint on trade. There are, however, some activities that are illegal under all circumstances, such as price fixing, market allocation and collusive bidding.

There is no safe harbor under the antitrust law for professional association activities. Therefore, association meeting participants should refrain from discussing any activity that could potentially be construed as having an anti-competitive effect. Discussions relating to product or service pricing, market allocations, membership restrictions, product standardization or other conditions on trade could arguably be perceived as a restraint on trade and may expose the SOA and its members to antitrust enforcement procedures.

While participating in all SOA in person meetings, webinars, teleconferences or side discussions, you should avoid discussing competitively sensitive information with competitors and follow these guidelines:

- **Do not** discuss prices for services or products or anything else that might affect prices
- **Do not** discuss what you or other entities plan to do in a particular geographic or product markets or with particular customers.
- **Do not** speak on behalf of the SOA or any of its committees unless specifically authorized to do so.
- **Do** leave a meeting where any anticompetitive pricing or market allocation discussion occurs.
- **Do** alert SOA staff and/or legal counsel to any concerning discussions
- **Do** consult with legal counsel before raising any matter or making a statement that may involve competitively sensitive information.

Adherence to these guidelines involves not only avoidance of antitrust violations, but avoidance of behavior which might be so construed. These guidelines only provide an overview of prohibited activities. SOA legal counsel reviews meeting agenda and materials as deemed appropriate and any discussion that departs from the formal agenda should be scrutinized carefully. Antitrust compliance is everyone's responsibility; however, please seek legal counsel if you have any questions or concerns.

Presentation Disclaimer

Presentations are intended for educational purposes only and do not replace independent professional judgment. Statements of fact and opinions expressed are those of the participants individually and, unless expressly stated to the contrary, are not the opinion or position of the Society of Actuaries, its cosponsors or its committees. The Society of Actuaries does not endorse or approve, and assumes no responsibility for, the content, accuracy or completeness of the information presented. Attendees should note that the sessions are audio-recorded and may be published in various media, including print, audio and video formats without further notice.

Innovation Continues in Silicon Valley

- San Francisco is headquarters for GitHub, Splunk, Dropbox, LinkedIn, Salesforce, Slack, Yelp and many more well known technology companies
- Increasingly venture capital and dynamic company founders are fueling innovation in the way health benefits are delivered

Leveraging Technology

- Identifying health risks earlier using technology including predictive AI
- Better tools to identify patients who can benefit from specific programs
- Increasing the use of these programs by guiding members to the specific programs most beneficial to them
- Integrating these programs and measuring results

Our panel

- Mylea Charval, Ph.D. CEO and Founder, Savonix
 - Tools for early identification of the onset of dementia
- Raj Behal, MD, MPH, Chief Quality Officer, One Medical
 - Changing the way primary care is delivered
- Dave Sotelo, FSA, MAAA, Actuarial Manager, Collective Health
 - Integration and evaluation of more than 70 distinct 3rd party solutions

Logistics

- Each panelist will spend about 15 minutes presenting information about their programs
- We will have 20 minutes for Q & A at the end of the session
 - Use the Q & A Function
 - I will take your questions and moderate the Q & A session
 - Any questions that we do not get to will be answered ...

One Medical

Raj Behal, MD, MPH, Chief Quality Officer

- Practicing physician
- Former Chief Quality Officer, associate dean for quality, and clinical professor of Medicine at Stanford
- Former Associate Chief Medical Officer at Rush University Medical Center

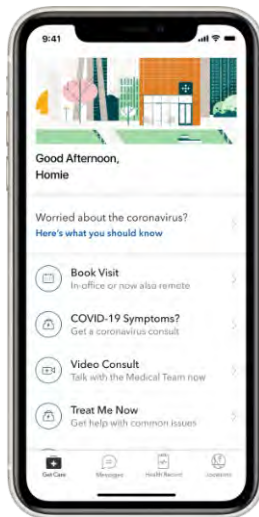

One Medical is a modern approach to care

One Medical is a national, membership-based primary care practice. From preventive care, to mental health, to COVID-19 screening and testing, One Medical is your team's healthcare homebase. With 24/7 access to virtual care and 80+ offices across ten U.S. cities, we're here whenever and wherever they need care.

Inviting, conveniently-located offices with same-day appointment availability*

Online appointment booking and 24/7 video visits with providers

More time with top-rated providers who listen —and can help with more than you may think

Technology -powered

47% of members visit web/app monthly ⁽¹⁾

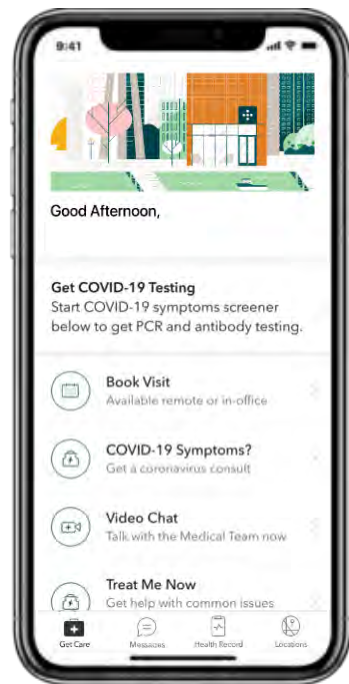

3X digital to in-office encounters ⁽²⁾

69% completion of member health tasks ⁽²⁾

77 conditions have automated digital follow up

44% reduction in provider EHR tasks ⁽³⁾

97% generic Rx powered by our algorithms ⁽⁴⁾

(4) For common conditions

A modern health benefit, designed for real -life

One Medical is a premium healthcare benefit that delivers high-quality healthcare wherever your employees work, live, shop and click.

Attracting & retaining employees with a benefit they love

Engaging employees to live healthier, more productive lives

Combining the best of primary care with innovative technology to lower costs over time

Delivering a comprehensive return to workplace program: Healthy Together

Healthy Together: One Medical's return-to-workplace program

Healthy Together is our comprehensive, evidence-based program to help our employer partners navigate workplace reentry and get back to work safely.

- Developed by One Medical clinical and public health experts
- A strategic framework to aid in planning, alongside actionable implementation guides
- Powered by One Medical's proprietary technology platform
- Delivered by One Medical's exceptional providers who care for the whole person, body and mind
- All intended to guide you and your teams safely through planning, re-entry, and beyond as your healthcare homebase
- Included as a benefit of partnership

HEALTHY TOGETHER

A phased, cohort -based approach

Daily COVID-19 screening & status badge

Comprehensive testing solutions

Workplace safety recommendations

Employee/ Student communication resources

24/7 access to care

Approach to Care and Quality

PATIENT CENTERED ONE MEDICAL HOME

Six Components of our Care Model

ACCESS

Access when needed, in-office PCP or 24x7 virtual care clinicians

TEAM BASED CARE

PCPs, virtual clinical team, office staff, care nav & coaches (PT, chiro, mental health @ onsites)

EVIDENCE INFORMED

Guidelines & protocols with shared decision making to account for patient preferences

WHOLE PERSON CARE

Relationship-based care for physical and mental health

COORDINATED CARE

Information sharing with specialists, managing referrals, directing care

OUTCOMES DRIVEN

Focus on individual and population health and costs

One Medical Care Model designed to provide excellent experience with better health and more cost-efficient care

ONE MEDICAL WHOLEPERSON OUTCOMES FRAMEWORK

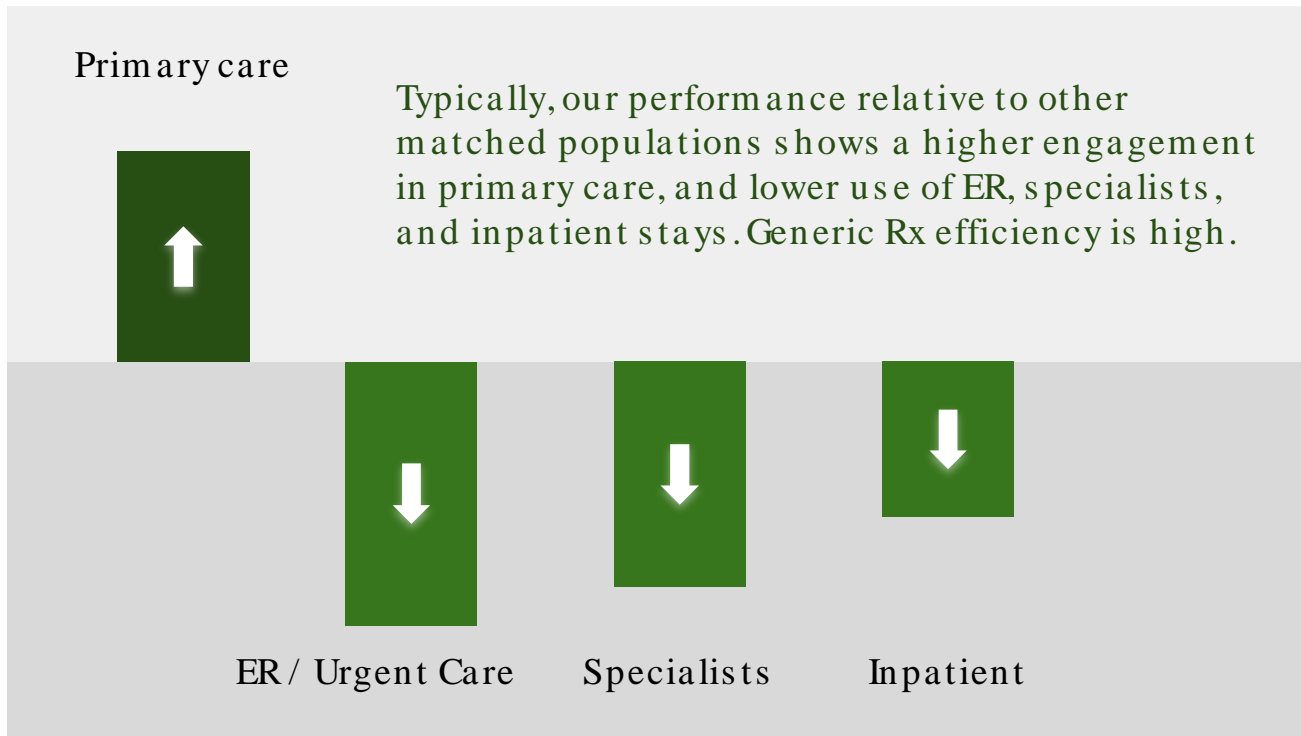

Our outcomes framework is designed to tackle what ails the modern society while being responsible stewards of healthcare resources. We take an **expansive view** of what people want from healthcare: Longer, healthier lives with physical as well as mental wellbeing.

Measuring Cost Impact

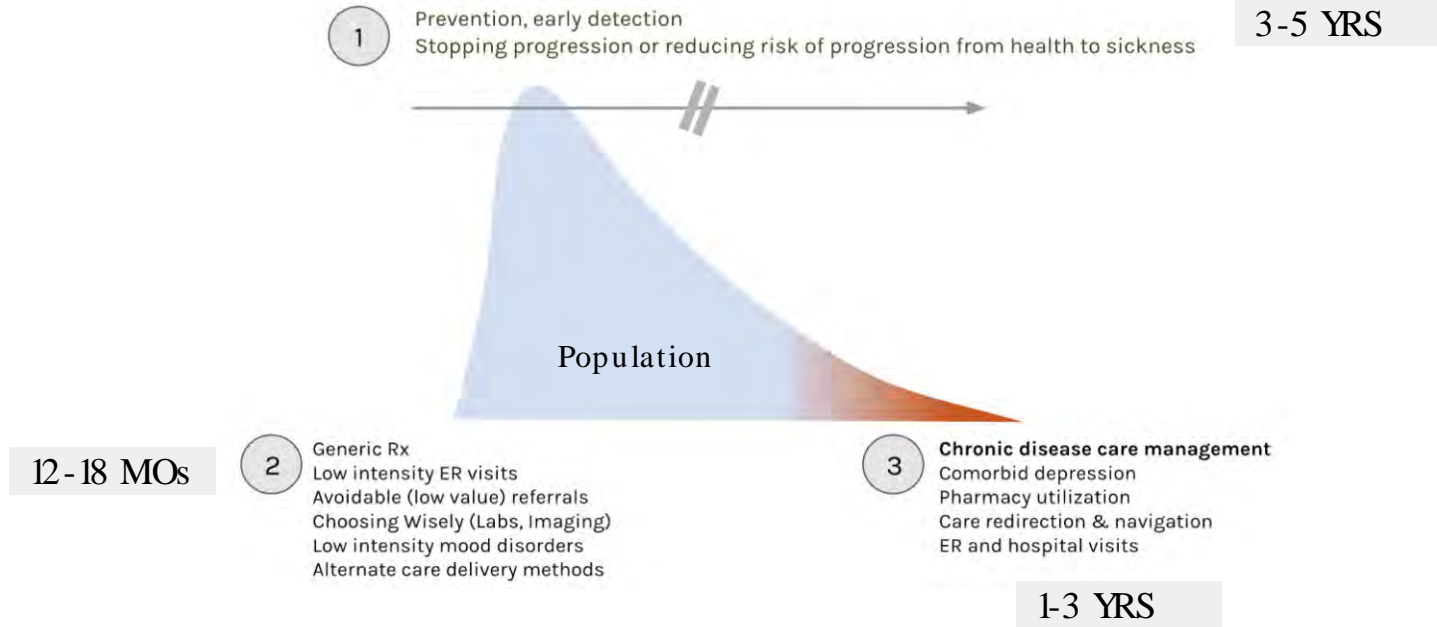

IMPACT PATTERNS IN RESOURCE USE AND COSTS

TOTAL COST OF CARE: LEVERS AND “PAYOFF” IMPACT HORIZONS

KEY INTERVENTIONS TO IMPROVE HEALTH & REDUCE COSTS

IN SICKNESS AND IN HEALTH - AND IN THE SPACE BETWEEN

To tackle *long-term* outcomes and costs, we are targeting the **space between health and sickness** - the **reservoir for *future* chronic diseases and costs**

Cognitive impairment & Dementia are a big problem

Cognitive Impairment Prevalence in US Population

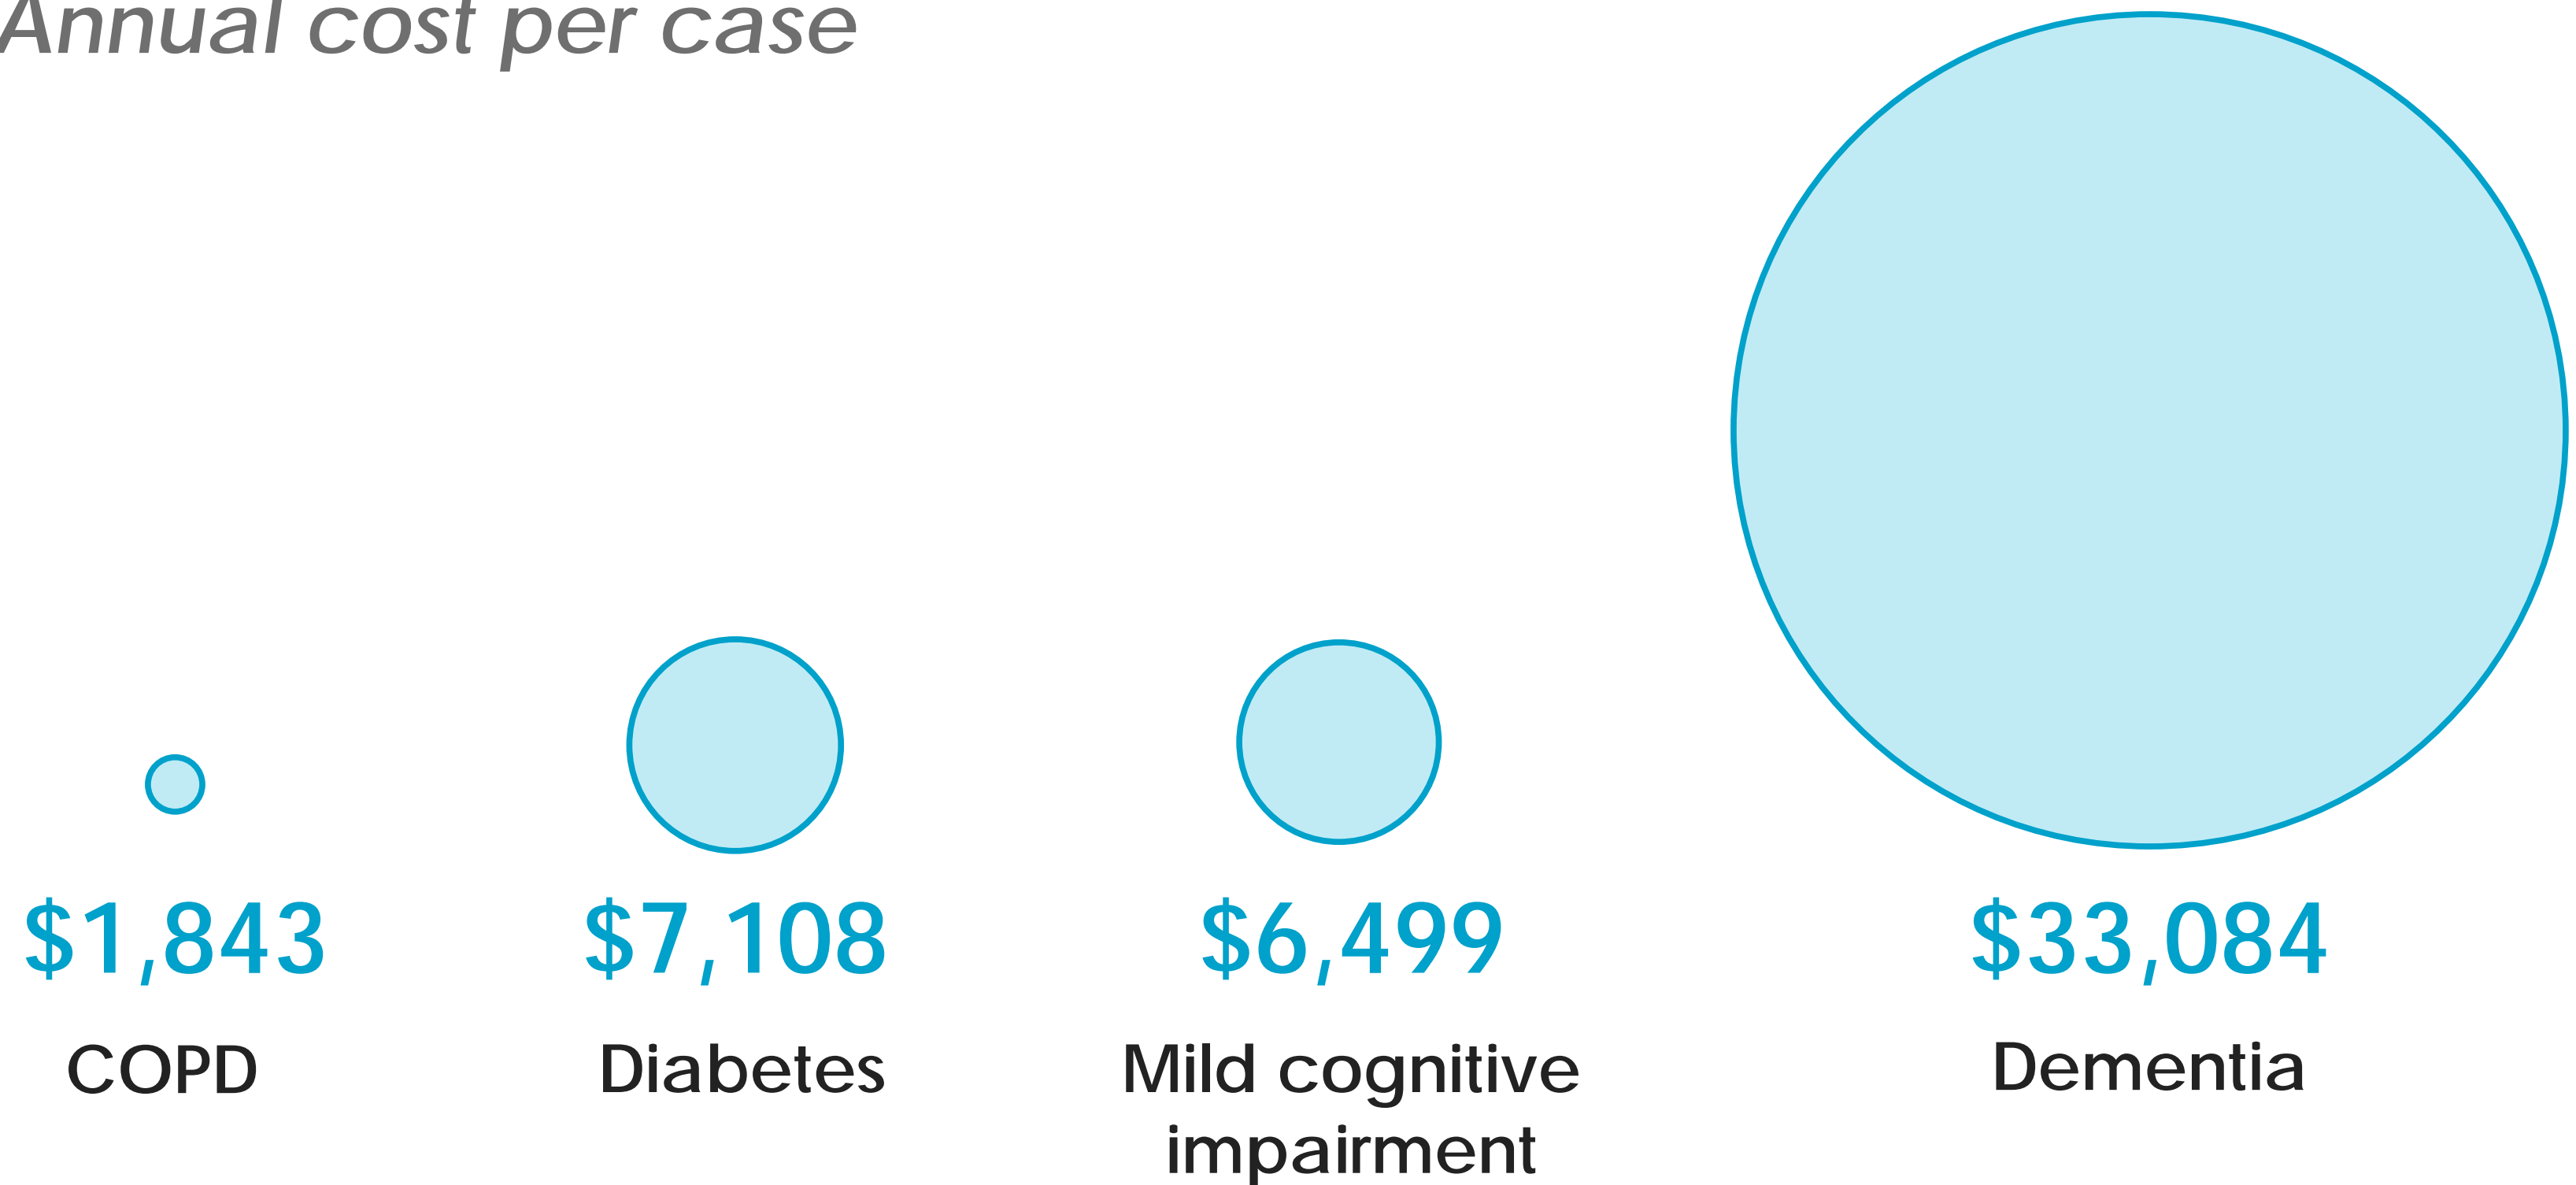

12 million Americans have some form of cognitive impairment.

80% have not been diagnosed.

Dementia is an expensive disease

Annual cost per case

Med adherence depends on cognitive health

COPD

Cognitive impairment increases risk of not completing pulmonary rehabilitation by 2x.

Diabetes

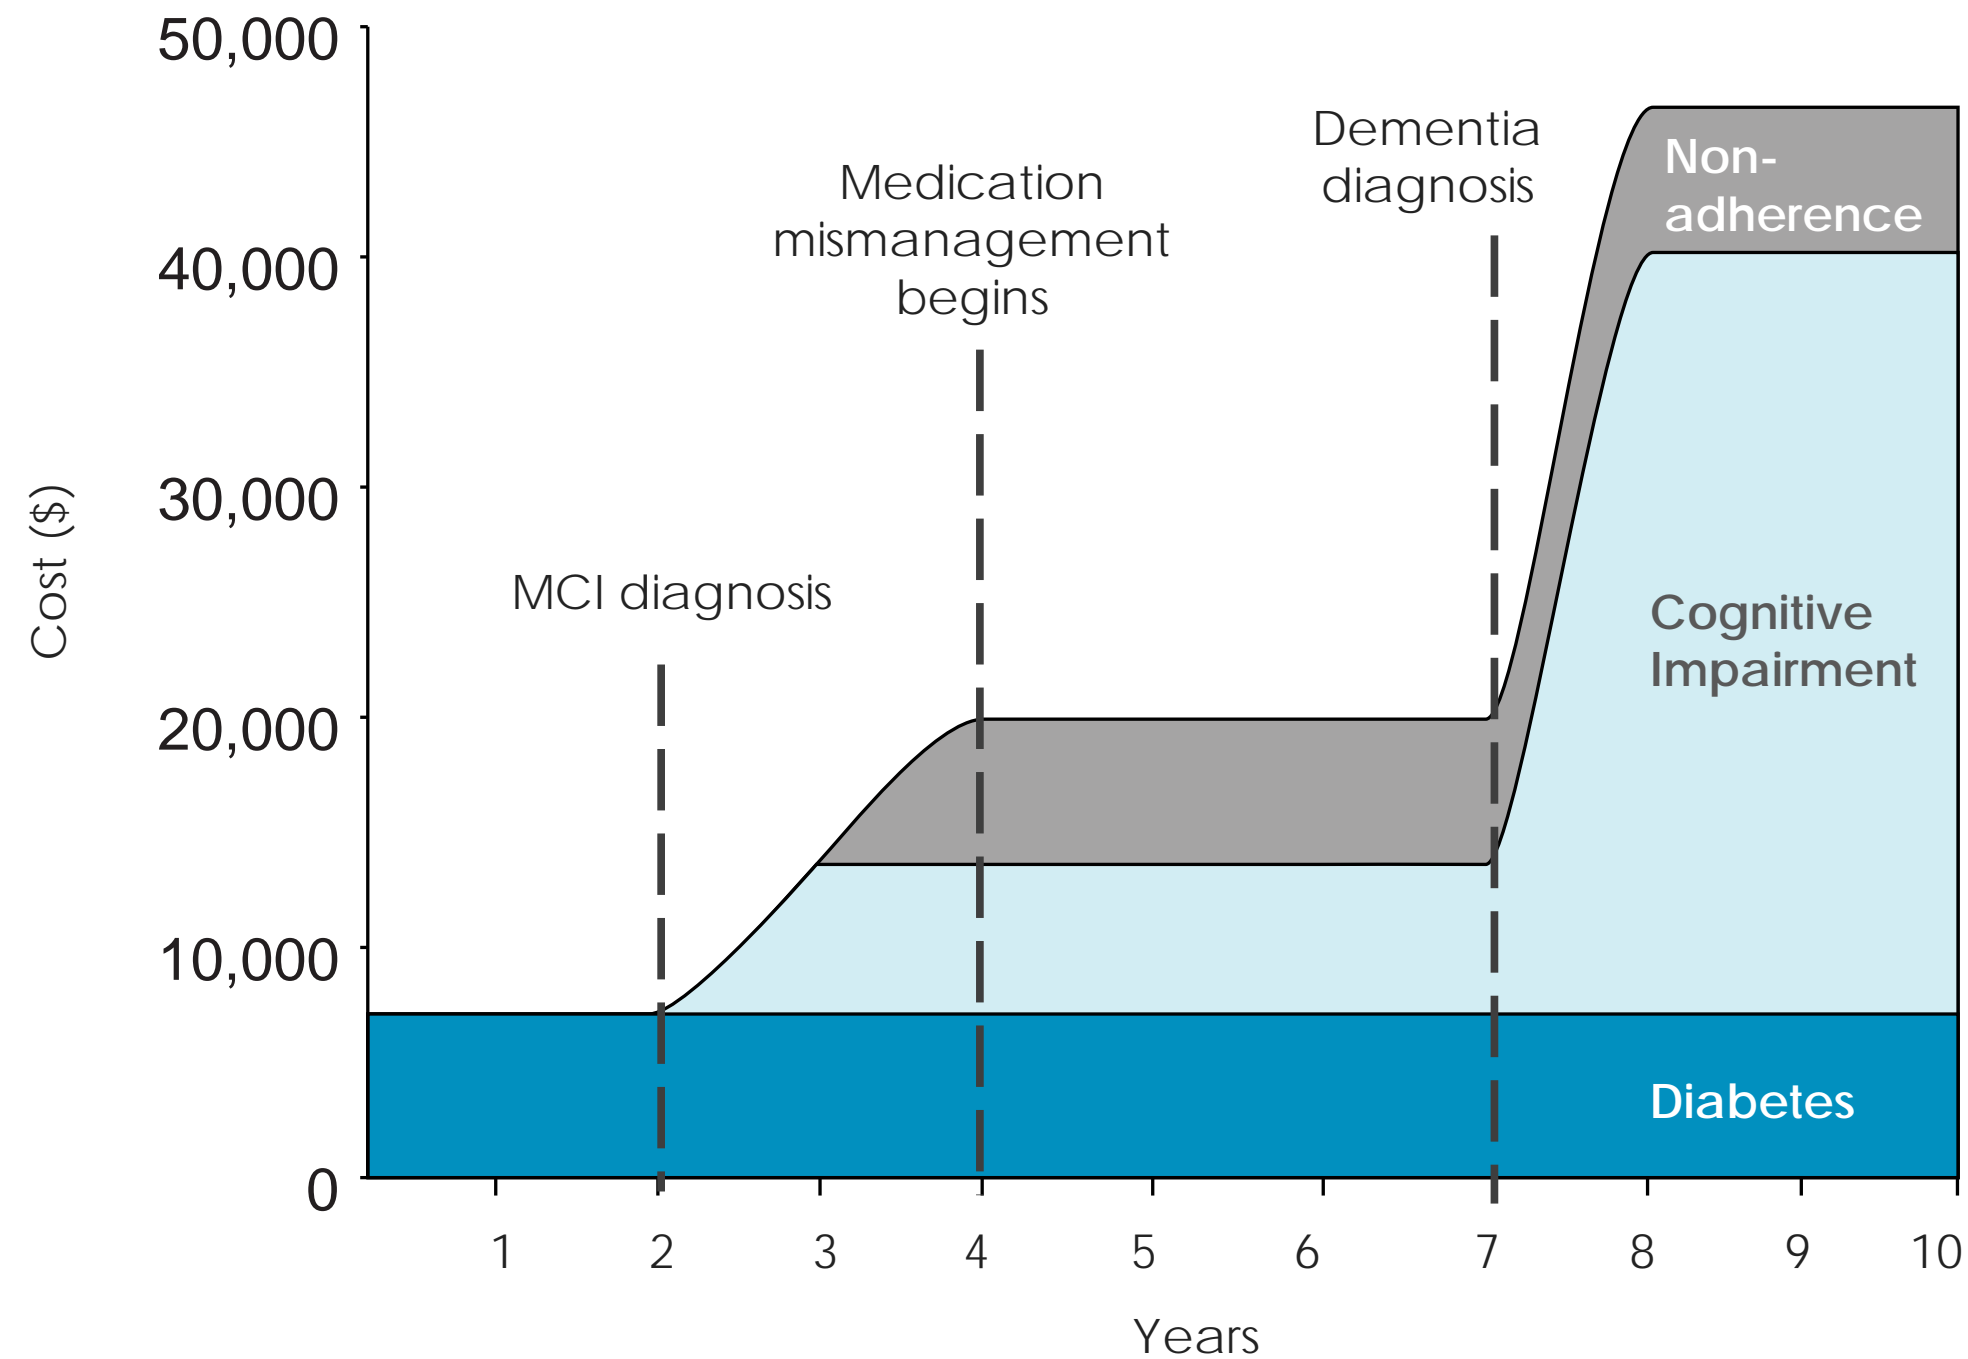

47% of self-management fails – cognition is a top three predictor.

Heart Disease

Heart disease increases risk of cognitive impairment by 45%.

The Annual Cost of Diabetes and Cognitive Impairment Over Time

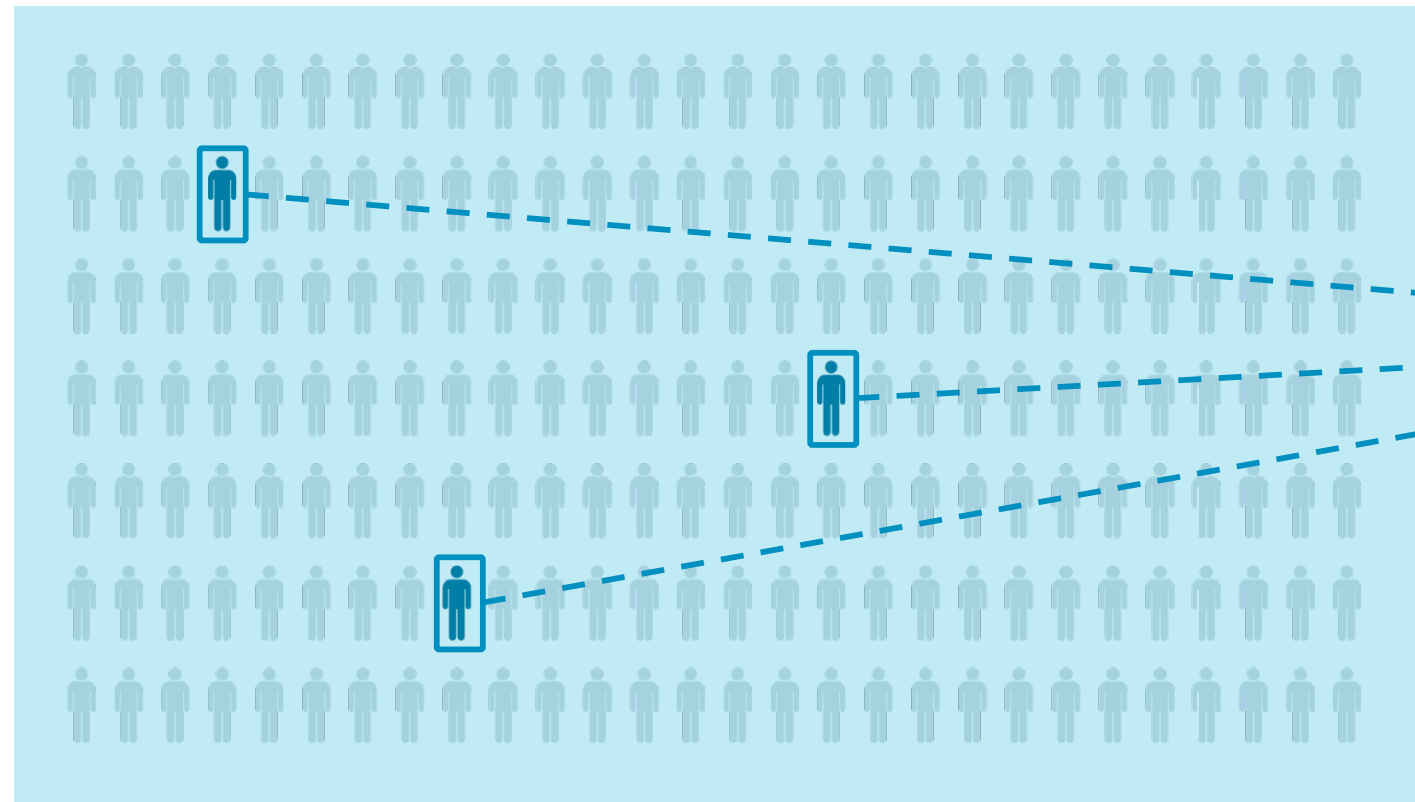

Healthcare costs **spiral** when diabetes is comorbid with cognitive impairment.

The image features a dark blue background with several wireframe models of a human brain. The models are rendered in a light blue color and are arranged in two rows. The top row contains three brain models, and the bottom row contains two. The central text is white and reads:

**Access population level data
around cognition and behavior**

Build precision risk models based on the data of your members

Total US Population

Insurance Company Member Population

Aggregate Population Stats

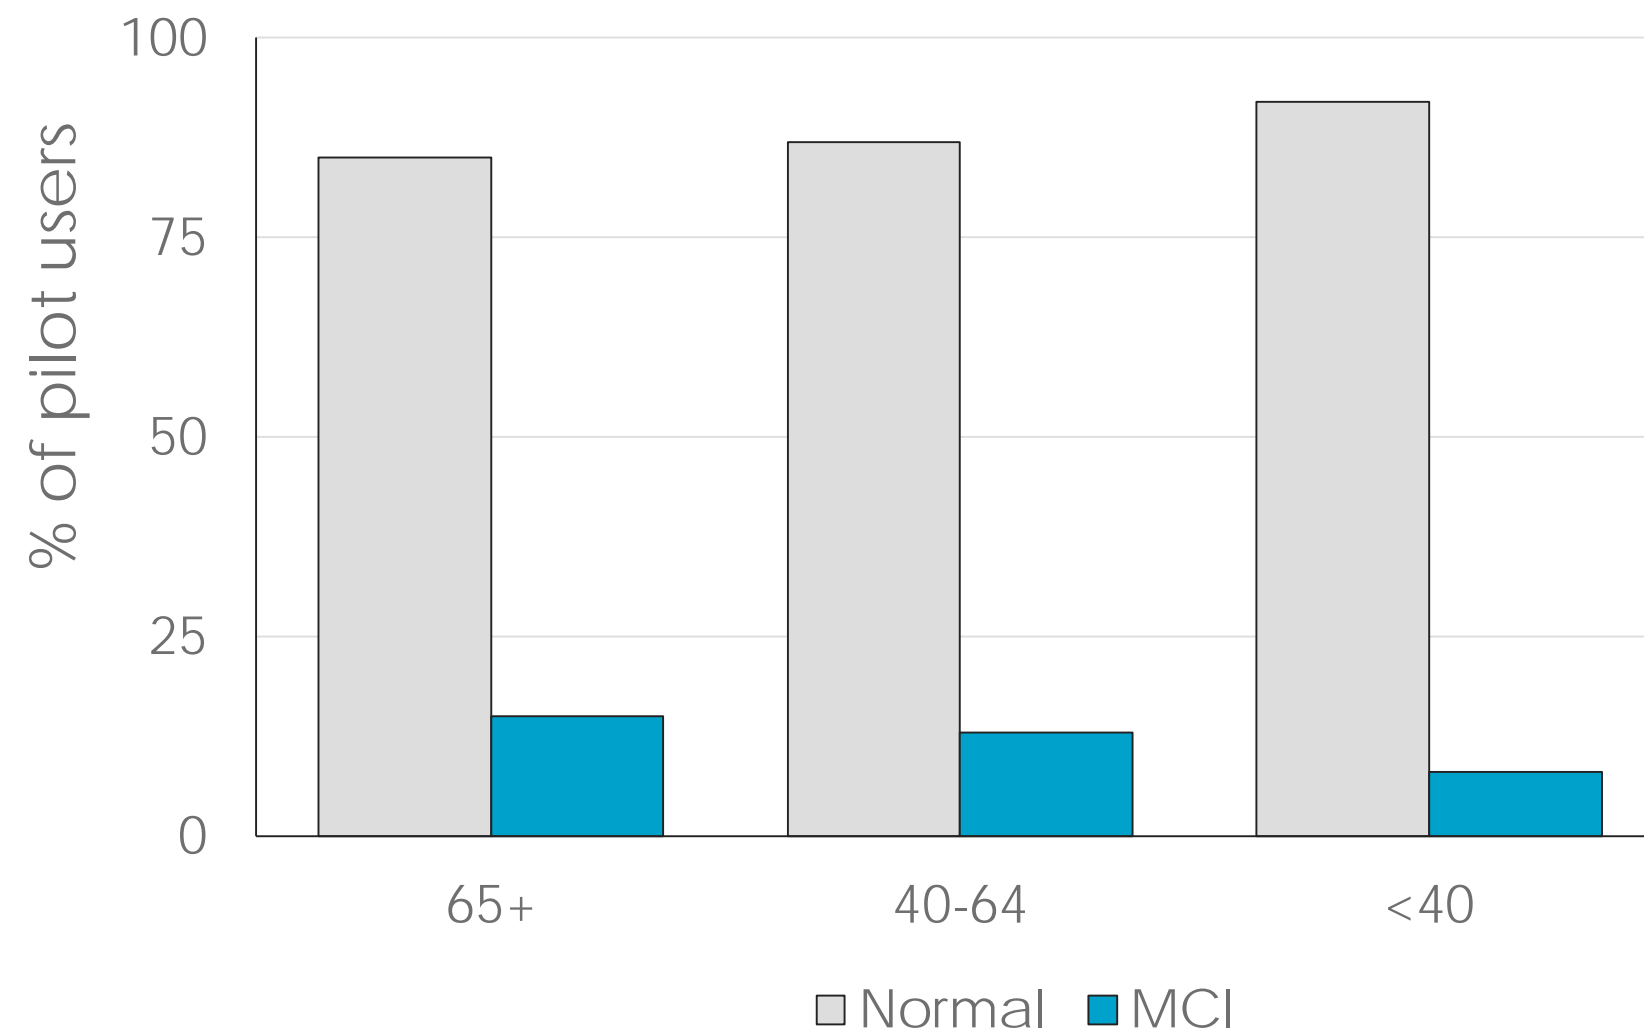

- 20% cognitive impairment
- 50% exercise regularly
- 40% smoke

Member Population Stats

- 40% cognitive impairment
- 20% exercise regularly
- 60% smoke

Case Study Fortune 50 Insurer: Forecasting MCI and Dementia Claims Risk

Prevalence of cognitive impairment in
Fortune 50 Insurer Members

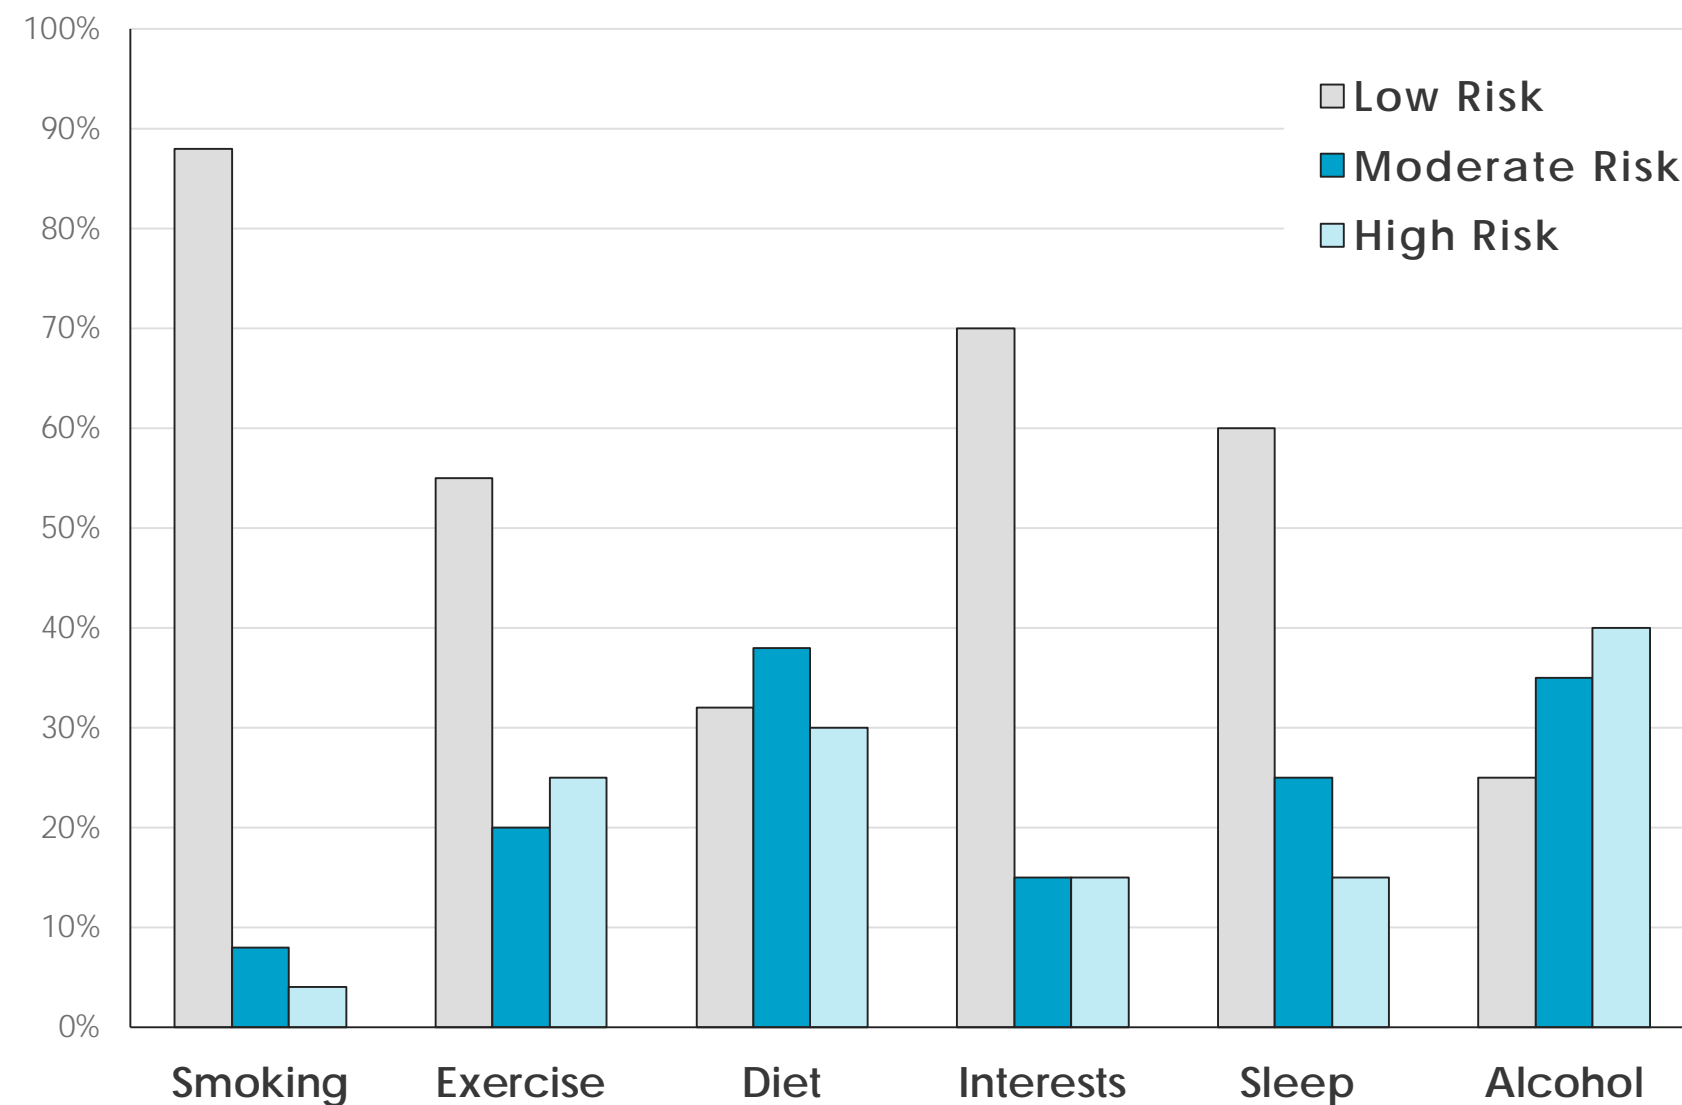

Cognitive impairment rate is lower than average in Fortune 50 Insurer population.

Prevalence of MCI for 65+

- National population: **21%**
- Insurer population: **15%**

Improve risk models with cognitive data plus lifestyle risk factor data

Risk Determined from Savonix Lifestyle Questionnaire

By understanding a population's lifestyle factors risk, we gain more insight into dementia risk.

The risk of dementia increases by

+ 45% for smokers

+ 23% for poor sleep

+ 10% for heavy drinkers

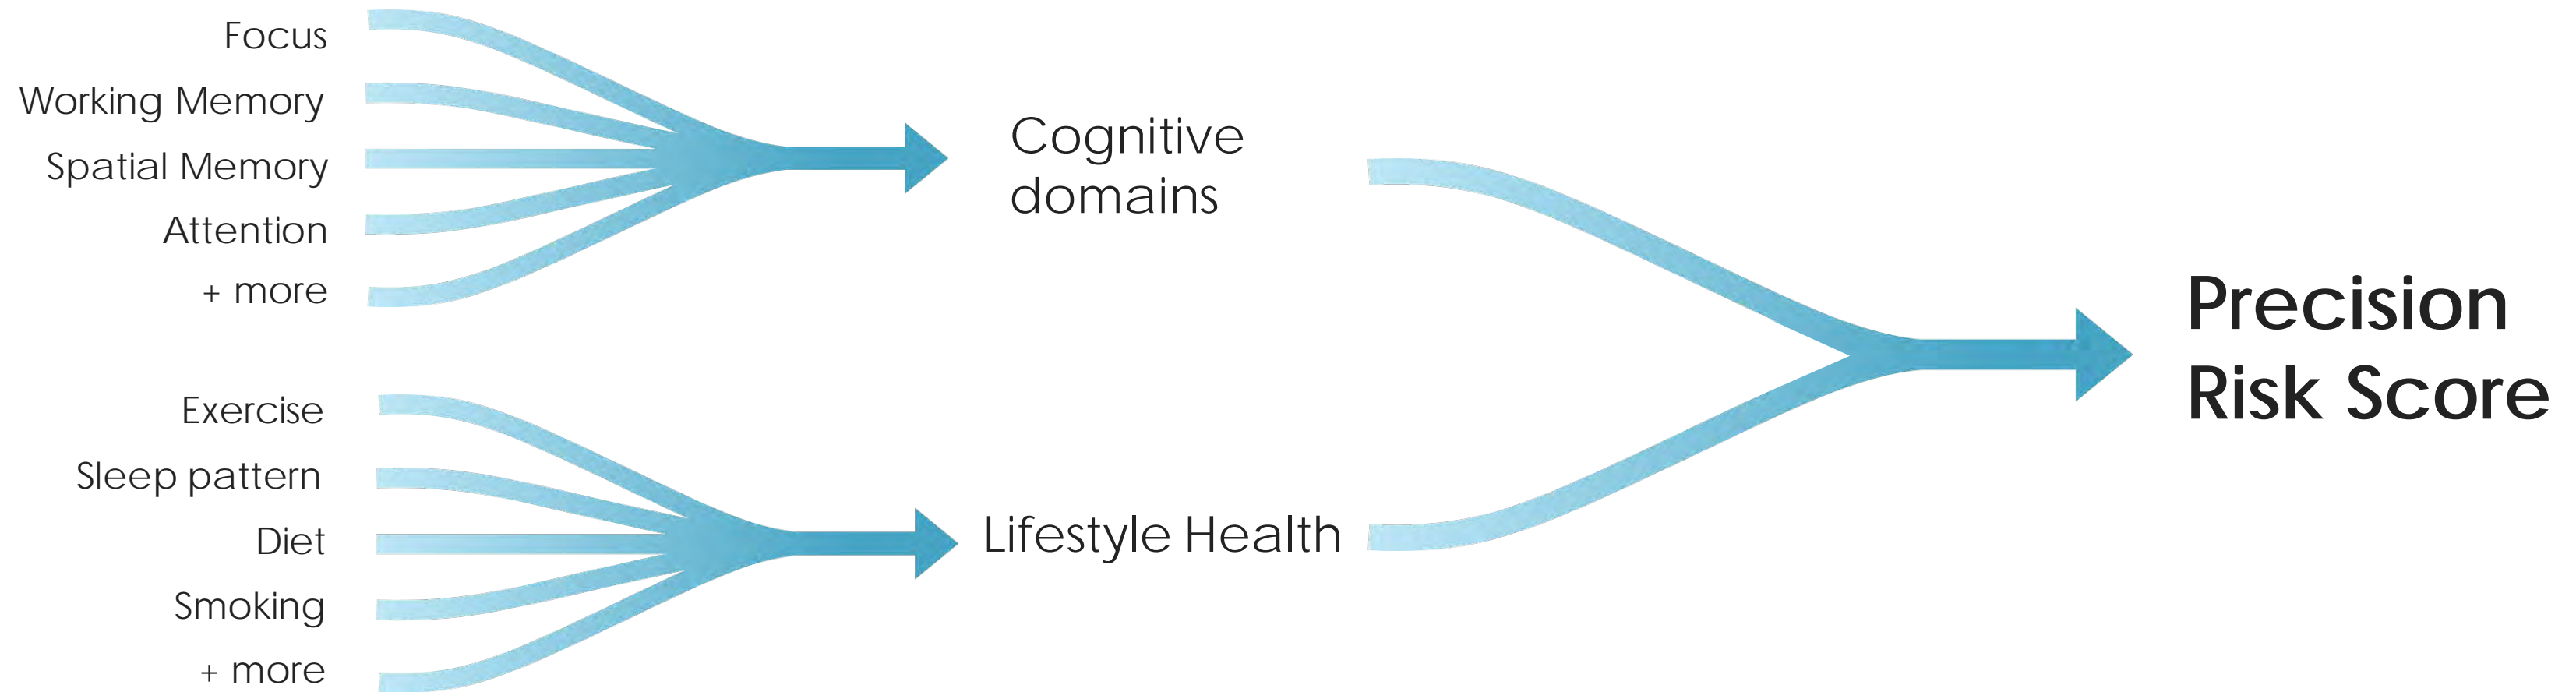

The risk of dementia decreases by

-26% for large social support networks

-40% for healthy diet

-32% for regular exercise

A single Score to predict Dementia Claims Risk

The image features four wireframe brain models in a light blue color, set against a dark blue background. The brains are arranged in a 2x2 grid. The top-left brain is shown in a lateral view, the top-right in a medial view, the bottom-left in a superior view, and the bottom-right in an inferior view. The central text is white and reads:

**Access Medicare
Reimbursement for
dementia diagnoses**

— CMS has significantly increased reimbursement by adding a dementia risk adjustment factor

The Savonix solution

An end-to-end solution for MCI and Dementia Risk

Why measure with Savonix?

Data Insights

We provide in-depth population-level analyses across cognitive, demographic, and behavioral dimensions.

Sensitivity

Our platform distinguishes between neuro-normal cognition, mild cognitive impairment and Alzheimer's disease.

Accessibility

The Savonix Assessment can be taken from anywhere in the world at any point in time with a mobile device.

— Consumers want answers about cognitive health

AARP® surveys tell us:

- **87%** of adults over 50 rank cognitive health as a top three concern.
- **75%** of those over the age of 40 would like access to early screening and information about how to prevent dementia.

A survey from a Fortune 50 Insurer tells us:

- **57%** said they would use Savonix, based on a description and screenshots.
- **40%** said they would pay to use Savonix.

— Consumers readily engage with Savonix

Case Study with a large self-employed insurer

- Total employees at company: **655**
- Median age: **49**
- **80.2%** chose to engage with the Savonix assessment
- Of those that engaged:
 - **100%** completed the cognitive assessment
 - **93%** completed the lifestyle assessment

— We find cognitive impairment in your population

Savonix unlocks your ability to

- Identify those at risk in your population
- Create a precision risk model with cognitive and lifestyle data

So you can

- Improve your underwriting efficiencies
- Drive informed novel product creation
- Triage your resources for those in need

The background features several wireframe models of human brains in a light blue color, arranged in a circular pattern around the center. The central brain is the most prominent and detailed, while others are faded and positioned at the top and bottom corners.

Point solution program utilization

Diabetes eye exam adherence

Diabetes is a complex group of diseases marked by high blood glucose (blood sugar) due to the body's inability to make or use insulin. Left unmanaged, diabetes can lead to serious complications, including heart disease, stroke, hypertension, blindness, kidney disease, diseases of the nervous system, amputations and premature death.

According to HEDIS guidelines, adults 18-75 years of age with diabetes (type 1 and type 2) should have the following tests performed annually:

- Hemoglobin A1c (HbA1c) testing
- Eye exam

98.2%
Adherence to Diabetes Eye Exams

49.0%

Aside from some forms of skin cancer, breast cancer is the most common cancer among American women, regardless of race or ethnicity. Screening can improve outcomes: Early detection reduces the risk of dying from breast cancer and can lead to a greater range of treatment options and lower health care costs.

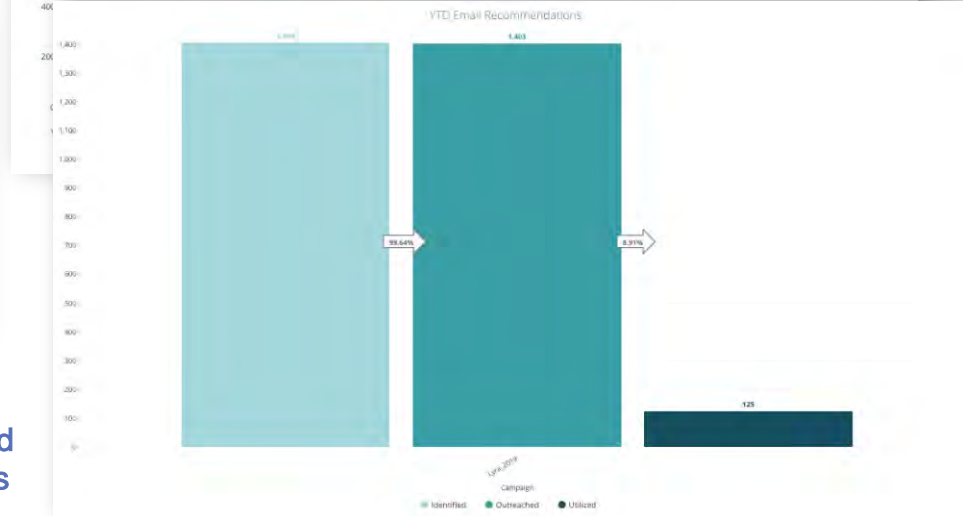

According to HEDIS guidelines, women 50-74 years of age should have at least one mammogram screening for breast cancer every two years.

69.6%
Adherence to Breast Cancer Screening

70.2%
HEDIS Benchmark

Breast cancer screening adherence
