3. Topic: Risk Modeling and Aggregation of Risks

Learning Objectives

The candidate will understand the concepts of risk modeling and be able to evaluate and understand the importance of risk models.

Learning Outcomes

The Candidate will be able to:

- a) Demonstrate how each of the financial and non-financial risks faced by an organization can be amenable to quantitative analysis
- b) Demonstrate organization-wide risk aggregation techniques that illustrate the concept of risk diversification by incorporating the use of correlation
- c) Evaluate and select appropriate copulas as part of the process of modelling multivariate risks
- d) Demonstrate the use of scenario analysis and stress testing in the measurement of current and emerging risks
- e) Demonstrate the importance of the tails of distributions, tail correlations, and low frequency / high severity events, and the use of extreme value theory to analyze these situations
- f) Demonstrate an understanding of model and parameter risk
- g) Evaluate and select appropriate models to handle diverse risks, including models that use a stochastic approach

4. Topic: Risk Measures

Learning Objectives

The candidate will understand how the risks faced by an entity can be quantified and the use of metrics to measure risk.

Learning Outcomes

The Candidate will be able to:

- a) Determine risk exposures using common risk measures (e.g., VaR and TVaR) and compare the properties and limitations of such measures
- b) Analyze quantitative financial and non-financial data using appropriate statistical methods to assist in quantifying risk
- c) Analyze risks that are not easily quantifiable, such as liquidity, operational, and environmental risks

5. Topic: Risk Management Tools and Techniques

Learning Objectives

The candidate will understand the approaches for managing risks and how an entity makes decisions about appropriate techniques.

Learning Outcomes

The Candidate will be able to:

- a) Demonstrate risk optimization and analyze the risk and return trade-offs that result from changes in the organization's risk profile
- b) Demonstrate application of the following responses to risk, including consideration of their costs and benefits: avoidance, acceptance, reduction without transfer, and transfer to a third party
- c) Demonstrate the use of controls for retained and residual risks
- d) Demonstrate how derivatives, synthetic securities, and financial contracting may be used to reduce risk within a static or dynamic hedging program
- e) Determine an appropriate choice of mitigation strategy for a given situation, which balances benefits with inherent costs (including exposure to moral hazard, credit, basis and other risks)
- f) Demonstrate the use of tools and techniques for identifying and managing credit and counterparty risk
- g) Analyze how ALM and other risk management principles can be used to establish investment policy and strategy, including asset allocation
- h) Demonstrate possible risk management strategies for non-financial risks
- i) Choose appropriate techniques to measure, model and manage various financial and non-financial risks faced by an organization
