EXAM MFE MODELS FOR FINANCIAL ECONOMICS

**EXAM MFE SAMPLE QUESTIONS  
INTRODUCTORY DERIVATIVES**

These questions are from McDonald Chapters 1, 2, 3, and 5 only. Questions 1-64 are former Exam FM Sample Exam Questions. Some of the questions have been slightly modified to match the format of Exam MFE. Questions 65-75 are newly added.

These questions are representative of the types of questions that might be asked of candidates sitting for Exam MFE. These questions are intended to represent the depth of understanding required of candidates. The distribution of questions by topic is not intended to represent the distribution of questions on future exams.

February 8, 2017 changes:

Question 31 has been deleted and Question 69 has been edited.

Copyright 2017 by the Society of Actuaries.

**MFE-01-17**

1.

Determine which statement about zero-cost purchased collars is FALSE

- (A) A zero-width, zero-cost collar can be created by setting both the put and call strike prices at the forward price.
- (B) There are an infinite number of zero-cost collars.
- (C) The put option can be at-the-money.
- (D) The call option can be at-the-money.
- (E) The strike price on the put option must be at or below the forward price.

2.

You are given the following:

- The current price to buy one share of XYZ stock is 500.
- The stock does not pay dividends.
- The continuously compounded risk-free interest rate is 6%.
- A European call option on one share of XYZ stock with a strike price of  $K$  that expires in one year costs 66.59.
- A European put option on one share of XYZ stock with a strike price of  $K$  that expires in one year costs 18.64.

Using put-call parity, calculate the strike price,  $K$ .

- (A) 449
- (B) 452
- (C) 480
- (D) 559
- (E) 582

3.

Happy Jalapenos, LLC has an exclusive contract to supply jalapeno peppers to the organizers of the annual jalapeno eating contest. The contract states that the contest organizers will take delivery of 10,000 jalapenos in one year at the market price. It will cost Happy Jalapenos 1,000 to provide 10,000 jalapenos and today's market price is 0.12 for one jalapeno. The continuously compounded risk-free interest rate is 6%.

Happy Jalapenos has decided to hedge as follows:

Buy 10,000 0.12-strike put options for 84.30 and sell 10,000 0.14-strike call options for 74.80. Both options are one-year European.

Happy Jalapenos believes the market price in one year will be somewhere between 0.10 and 0.15 per jalapeno.

Determine which of the following intervals represents the range of possible profit one year from now for Happy Jalapenos.

- (A) -200 to 100
- (B) -110 to 190
- (C) -100 to 200
- (D) 190 to 390
- (E) 200 to 400

DELETED

5.

The PS index has the following characteristics:

- One share of the PS index currently sells for 1,000.
- The PS index does not pay dividends.

Sam wants to lock in the ability to buy this index in one year for a price of 1,025. He can do this by buying or selling European put and call options with a strike price of 1,025.

The annual effective risk-free interest rate is 5%.

Determine which of the following gives the hedging strategy that will achieve Sam's objective and also gives the cost today of establishing this position.

- (A) Buy the put and sell the call, receive 23.81
- (B) Buy the put and sell the call, spend 23.81
- (C) Buy the put and sell the call, no cost
- (D) Buy the call and sell the put, receive 23.81
- (E) Buy the call and sell the put, spend 23.81

6.

The following relates to one share of XYZ stock:

- The current price is 100.
- The forward price for delivery in one year is 105.
- $P$  is the expected price in one year

Determine which of the following statements about  $P$  is TRUE.

- (A)  $P < 100$
- (B)  $P = 100$
- (C)  $100 < P < 105$
- (D)  $P = 105$
- (E)  $P > 105$

7.

A non-dividend paying stock currently sells for 100. One year from now the stock sells for 110. The continuously compounded risk-free interest rate is 6%. A trader purchases the stock in the following manner:

- The trader pays 100 today
- The trader takes possession of the stock in one year

Determine which of the following describes this arrangement.

- (A) Outright purchase
- (B) Fully leveraged purchase
- (C) Prepaid forward contract
- (D) Forward contract
- (E) This arrangement is not possible due to arbitrage opportunities

8.

Joe believes that the volatility of a stock is higher than indicated by market prices for options on that stock. He wants to speculate on that belief by buying or selling at-the-money options.

Determine which of the following strategies would achieve Joe's goal.

- (A) Buy a strangle
- (B) Buy a straddle
- (C) Sell a straddle
- (D) Buy a butterfly spread
- (E) Sell a butterfly spread

9.

Stock ABC has the following characteristics:

- The current price to buy one share is 100.
- The stock does not pay dividends.
- European options on one share expiring in one year have the following prices:

Strike Price	Call option price	Put option price
90	14.63	0.24
100	6.80	1.93
110	2.17	6.81

A butterfly spread on this stock has the following profit diagram.

The continuously compounded risk-free interest rate is 5%.

Determine which of the following will NOT produce this profit diagram.

- (A) Buy a 90 put, buy a 110 put, sell two 100 puts
- (B) Buy a 90 call, buy a 110 call, sell two 100 calls
- (C) Buy a 90 put, sell a 100 put, sell a 100 call, buy a 110 call
- (D) Buy one share of the stock, buy a 90 call, buy a 110 put, sell two 100 puts
- (E) Buy one share of the stock, buy a 90 put, buy a 110 call, sell two 100 calls.

10.

Stock XYZ has a current price of 100. The forward price for delivery of this stock in 1 year is 110.

Unless otherwise indicated, the stock pays no dividends and the annual effective risk-free interest rate is 10%.

Determine which of the following statements is FALSE.

- (A) The time-1 profit diagram and the time-1 payoff diagram for long positions in this forward contract are identical.
- (B) The time-1 profit for a long position in this forward contract is exactly opposite to the time-1 profit for the corresponding short forward position.
- (C) There is no comparative advantage to investing in the stock versus investing in the forward contract.
- (D) If the 10% interest rate was continuously compounded instead of annual effective, then it would be more beneficial to invest in the stock, rather than the forward contract.
- (E) If there was a dividend of 3.00 paid 6 months from now, then it would be more beneficial to invest in the stock, rather than the forward contract.

11.

Stock XYZ has the following characteristics:

- The current price is 40.
- The price of a 35-strike 1-year European call option is 9.12.
- The price of a 40-strike 1-year European call option is 6.22.
- The price of a 45-strike 1-year European call option is 4.08.

The annual effective risk-free interest rate is 8%.

Let  $S$  be the price of the stock one year from now.

All call positions being compared are long.

Determine the range for  $S$  such that the 45-strike call produce a higher profit than the 40-strike call, but a lower profit than the 35-strike call.

- (A)  $S < 38.13$
- (B)  $38.13 < S < 40.44$
- (C)  $40.44 < S < 42.31$
- (D)  $S > 42.31$
- (E) The range is empty.

12.

Consider a European put option on a stock index without dividends, with 6 months to expiration and a strike price of 1,000. Suppose that the effective six-month interest rate is 2%, and that the put costs 74.20 today.

Calculate the price that the index must be in 6 months so that being long in the put would produce the same profit as being short in the put.

- (A) 922.83
- (B) 924.32
- (C) 1,000.00
- (D) 1,075.68
- (E) 1,077.17

13.

A trader shorts one share of a stock index for 50 and buys a 60-strike European call option on that stock that expires in 2 years for 10. Assume the annual effective risk-free interest rate is 3%.

The stock index increases to 75 after 2 years.

Calculate the profit on your combined position, and determine an alternative name for this combined position.

	<b>Profit</b>	<b>Name</b>
(A)	-22.64	Floor
(B)	-17.56	Floor
(C)	-22.64	Cap
(D)	-17.56	Cap
(E)	-22.64	“Written” Covered Call

14.

The current price of a non-dividend paying stock is 40 and the continuously compounded risk-free interest rate is 8%. You are given that the price of a 35-strike call option is 3.35 higher than the price of a 40-strike call option, where both options expire in 3 months.

Calculate the amount by which the price of an otherwise equivalent 40-strike put option exceeds the price of an otherwise equivalent 35-strike put option.

- (A) 1.55
- (B) 1.65
- (C) 1.75
- (D) 3.25
- (E) 3.35

15.

The current price of a non-dividend paying stock is 40 and the continuously compounded risk-free interest rate is 8%. You enter into a short position on 3 call options, each with 3 months to maturity, a strike price of 35, and an option premium of 6.13. Simultaneously, you enter into a long position on 5 call options, each with 3 months to maturity, a strike price of 40, and an option premium of 2.78.

All 8 options are held until maturity.

Calculate the maximum possible profit and the maximum possible loss for the entire option portfolio.

	Maximum Profit	Maximum Loss
(A)	3.42	4.58
(B)	4.58	10.42
(C)	Unlimited	10.42
(D)	4.58	Unlimited
(E)	Unlimited	Unlimited

16.

The current price of a non-dividend paying stock is 40 and the continuously compounded risk-free interest rate is 8%. The following table shows call and put option premiums for three-month European of various exercise prices:

Exercise Price	Call Premium	Put Premium
35	6.13	0.44
40	2.78	1.99
45	0.97	5.08

A trader interested in speculating on volatility in the stock price is considering two investment strategies. The first is a 40-strike straddle. The second is a strangle consisting of a 35-strike put and a 45-strike call.

Determine the range of stock prices in 3 months for which the strangle outperforms the straddle.

- (A) The strangle never outperforms the straddle.
- (B)  $33.56 < S_T < 46.44$
- (C)  $35.13 < S_T < 44.87$
- (D)  $36.57 < S_T < 43.43$
- (E) The strangle always outperforms the straddle.

17.

The current price for a stock index is 1,000. The following premiums exist for various options to buy or sell the stock index six months from now:

Strike Price	Call Premium	Put Premium
950	120.41	51.78
1,000	93.81	74.20
1,050	71.80	101.21

Strategy I is to buy the 1,050-strike call and to sell the 950-strike call.

Strategy II is to buy the 1,050-strike put and to sell the 950-strike put.

Strategy III is to buy the 950-strike call, sell the 1,000-strike call, sell the 950-strike put, and buy the 1,000-strike put.

Assume that the price of the stock index in 6 months will be between 950 and 1,050.

Determine which, if any, of the three strategies will have greater payoffs in six months for lower prices of the stock index than for relatively higher prices.

- (A) None
- (B) I and II only
- (C) I and III only
- (D) II and III only
- (E) The correct answer is not given by (A), (B), (C), or (D)

20.

The current price of a stock is 200, and the continuously compounded risk-free interest rate is 4%. A dividend will be paid every quarter for the next 3 years, with the first dividend occurring 3 months from now. The amount of the first dividend is 1.50, but each subsequent dividend will be 1% higher than the one previously paid.

Calculate the fair price of a 3-year forward contract on this stock.

- (A) 200
- (B) 205
- (C) 210
- (D) 215
- (E) 220

21.

A market maker in stock index forward contracts observes a 6-month forward price of 112 on the index. The index spot price is 110 and the continuously compounded dividend yield on the index is 2%.

The continuously compounded risk-free interest rate is 5%.

Describe actions the market maker could take to exploit an arbitrage opportunity and calculate the resulting profit (per index unit).

- (A) Buy observed forward, sell synthetic forward, Profit = 0.34
- (B) Buy observed forward, sell synthetic forward, Profit = 0.78
- (C) Buy observed forward, sell synthetic forward, Profit = 1.35
- (D) Sell observed forward, buy synthetic forward, Profit = 0.78
- (E) Sell observed forward, buy synthetic forward, Profit = 0.34

24.

Determine which of the following statements is NOT a typical reason for why derivative securities are used to manage financial risk.

- (A) Derivatives are used as a means of hedging.
- (B) Derivatives are used to reduce the likelihood of bankruptcy.
- (C) Derivatives are used to reduce transaction costs.
- (D) Derivatives are used to satisfy regulatory, tax, and accounting constraints.
- (E) Derivatives are used as a form of insurance.

25.

Determine which of the following statements concerning risk sharing, in the context of financial risk management, is LEAST accurate.

- (A) In an insurance market, individuals that do not incur losses have shared risk with individuals that do incur losses.
- (B) Insurance companies can share risk by ceding some of the excess risk from large claims to reinsurers.
- (C) Reinsurance companies can further share risk by investing in catastrophe bonds.
- (D) Risk sharing reduces diversifiable risk, more so than reducing non-diversifiable risk.
- (E) Ideally, any risk-sharing mechanism should benefit all parties sharing the risk.

26.

Determine which, if any, of the following positions has or have an unlimited loss potential from adverse price movement in the underlying asset, regardless of the initial premium received.

I. Short 1 forward contract

II. Short 1 call option

III. Short 1 put option

(A) None

(B) I and II only

(C) I and III only

(D) II and III only

(E) The correct answer is not given by (A), (B), (C), or (D)

29.

The dividend yield on a stock and the interest rate used to discount the stock's cash flows are both continuously compounded. The dividend yield is less than the interest rate, but both are positive.

The following table shows four methods to buy the stock and the total payment needed for each method. The payment amounts are as of the time of payment and have not been discounted to the present date.

METHOD	TOTAL PAYMENT
Outright purchase	A
Fully leveraged purchase	B
Prepaid forward contract	C
Forward contract	D

Determine which of the following is the correct ranking, from smallest to largest, for the amount of payment needed to acquire the stock.

- (A)  $C < A < D < B$
- (B)  $A < C < D < B$
- (C)  $D < C < A < B$
- (D)  $C < A < B < D$
- (E)  $A < C < B < D$

30.

Determine which of the following is NOT a distinguishing characteristic of futures contracts, relative to forward contracts.

- (A) Contracts are settled daily, and marked-to-market.
- (B) Contracts are more liquid, as one can offset an obligation by taking the opposite position.
- (C) Contracts are more customized to suit the buyer's needs.
- (D) Contracts are structured to minimize the effects of credit risk.
- (E) Contracts have price limits, beyond which trading may be temporarily halted.

Judy decides to take a short position in 20 contracts of S&P 500 futures. Each contract is for the delivery of 250 units of the index at a price of 1500 per unit, exactly one month from now. The initial margin is 5% of the notional value, and the maintenance margin is 90% of the initial margin. Judy earns a continuously compounded risk-free interest rate of 4% on her margin balance. The position is marked-to-market on a daily basis.

On the day of the first marking-to-market, the value of the index drops to 1498. On the day of the second marking-to-market, the value of the index is  $X$  and Judy is not required to add anything to the margin account.

Calculate the largest possible value of  $X$ .

- (A) 1490.50
- (B) 1492.50
- (C) 1500.50
- (D) 1505.50
- (E) 1507.50

33.

Several years ago, John bought three separate 6-month options on the same stock.

- Option I was an American-style put with strike price 20.
- Option II was a Bermuda-style call with strike price 25, where exercise was allowed at any time following an initial 3-month period of call protection.
- Option III was a European-style put with strike price 30.

When the options were bought, the stock price was 20.

When the options expired, the stock price was 26.

The table below gives the maximum and minimum stock price during the 6 month period:

Time Period:	1 <sup>st</sup> 3 months of Option Term	2 <sup>nd</sup> 3 months of Option Term
Maximum Stock Price	24	28
Minimum Stock Price	18	22

John exercised each option at the optimal time.

Rank the three options, from highest to lowest payoff.

- (A)  $I > II > III$
- (B)  $I > III > II$
- (C)  $II > I > III$
- (D)  $III > I > II$
- (E)  $III > II > I$

37.

A one-year forward contract on a stock has a price of \$75. The stock is expected to pay a dividend of \$1.50 at two future times, six months from now and one year from now, and the annual effective risk-free interest rate is 6%.

Calculate the current stock price.

- (A) 70.75
- (B) 73.63
- (C) 75.81
- (D) 77.87
- (E) 78.04

38.

The current price of a medical company's stock is 75. The expected value of the stock price in three years is 90 per share. The stock pays no dividends.

You are also given

- i) The risk-free interest rate is positive.
- ii) There are no transaction costs.
- iii) Investors require compensation for risk.

The price of a three-year forward on a share of this stock is  $X$ , and at this price an investor is willing to enter into the forward.

Determine what can be concluded about  $X$ .

- (A)  $X < 75$
- (B)  $X = 75$
- (C)  $75 < X < 90$
- (D)  $X = 90$
- (E)  $90 < X$

39.

Determine which of the following strategies creates a ratio spread, assuming all options are European.

- (A) Buy a one-year call, and sell a three-year call with the same strike price.
- (B) Buy a one-year call, and sell a three-year call with a different strike price.
- (C) Buy a one-year call, and buy three one-year calls with a different strike price.
- (D) Buy a one-year call, and sell three one-year puts with a different strike price.
- (E) Buy a one-year call, and sell three one-year calls with a different strike price.

40.

An investor is analyzing the costs of two-year, European options for aluminum and zinc at a particular strike price.

For each ton of aluminum, the two-year forward price is 1400, a call option costs 700, and a put option costs 550.

For each ton of zinc, the two-year forward price is 1600 and a put option costs 550.

The annual effective risk-free interest rate is 6%.

Calculate the cost of a call option per ton of zinc.

- (A) 522
- (B) 800
- (C) 878
- (D) 900
- (E) 1231

41.

XYZ stock pays no dividends and its current price is 100.

Assume the put, the call and the forward on XYZ stock are available and are priced so there are no arbitrage opportunities. Also, assume there are no transaction costs.

The annual effective risk-free interest rate is 1%.

Determine which of the following strategies currently has the highest net premium.

- (A) Long a six-month 100-strike put and short a six-month 100-strike call
- (B) Long a six-month forward on the stock
- (C) Long a six-month 101-strike put and short a six-month 101-strike call
- (D) Short a six-month forward on the stock
- (E) Long a six-month 105-strike put and short a six-month 105-strike call

42.

An investor purchases a non-dividend-paying stock and writes a  $t$ -year, European call option for this stock, with call premium  $C$ . The stock price at time of purchase and strike price are both  $K$ .

Assume that there are no transaction costs.

The risk-free annual force of interest is a constant  $r$ . Let  $S$  represent the stock price at time  $t$ .

$S > K$ .

Determine an algebraic expression for the investor's profit at expiration.

- (A)  $Ce^{rt}$
- (B)  $C(1+rt) - S + K$
- (C)  $Ce^{rt} - S + K$
- (D)  $Ce^{rt} + K(1 - e^{rt})$
- (E)  $C(1+r)^t + K[1 - (1+r)^t]$

43.

You are given:

- i) An investor short-sells a non-dividend paying stock that has a current price of 44 per share.
- ii) This investor also writes a collar on this stock consisting of a 40-strike European put option and a 50-strike European call option. Both options expire in one year.
- iii) The prices of the options on this stock are:

Strike Price	Call option	Put option
40	8.42	2.47
50	3.86	7.42

- iv) The continuously compounded risk-free interest rate is 5%.
- v) Assume there are no transaction costs.

Calculate the maximum profit for the overall position at expiration.

- (A) 2.61
- (B) 3.37
- (C) 4.79
- (D) 5.21
- (E) 7.39

44.

You are given the following information about two options, A and B:

- i) Option A is a one-year European put with exercise price 45.
- ii) Option B is a one-year American call with exercise price 55.
- iii) Both options are based on the same underlying asset, a stock that pays no dividends.
- iv) Both options go into effect at the same time and expire at  $t = 1$ .

You are also given the following information about the stock price:

- i) The initial stock price is 50.
- ii) The stock price at expiration is also 50.
- iii) The minimum stock price (from  $t = 0$  to  $t = 1$ ) is 46.
- iv) The maximum stock price (from  $t = 0$  to  $t = 1$ ) is 58.

Determine which of the following statements is true.

- (A) Both options A and B are “at-the-money” at expiration.
- (B) Both options A and B are “in-the-money” at expiration.
- (C) Both options A and B are “out-of-the-money” throughout each option’s term.
- (D) Only option A is ever “in-the-money” at some time during its term.
- (E) Only option B is ever “in-the-money” at some time during its term.

45.

An investor enters a long position in a futures contract on an index ( $F$ ) with a notional value of  $200 \times F$ , expiring in one year. The index pays a continuously compounded dividend yield of 4%, and the continuously compounded risk-free interest rate is 2%.

At the time of purchase, the index price is 1100. Three months later, the investor has sustained a loss of 100. Assume the margin account earns an interest rate of 0%.

Let  $S$  be the price of the index at the end of month three.

Calculate  $S$ .

- (A) 1078
- (B) 1085
- (C) 1094
- (D) 1105
- (E) 1110

46.

Determine which of the following statements about options is true.

- (A) Naked writing is the practice of buying options without taking an offsetting position in the underlying asset.
- (B) A covered call involves taking a long position in an asset together with a written call on the same asset.
- (C) An American style option can only be exercised during specified periods, but not for the entire life of the option.
- (D) A Bermudan style option allows the buyer the right to exercise at any time during the life of the option.
- (E) An in-the-money option is one which would have a positive profit if exercised immediately.

47.

An investor has written a covered call.

Determine which of the following represents the investor's position.

- (A) Short the call and short the stock
- (B) Short the call and long the stock
- (C) Short the call and no position on the stock
- (D) Long the call and short the stock
- (E) Long the call and long the stock

48.

For a certain stock, Investor A purchases a 45-strike call option while Investor B purchases a 135-strike put option. Both options are European with the same expiration date. Assume that there are no transaction costs.

If the final stock price at expiration is  $S$ , Investor A's payoff will be 12.

Calculate Investor B's payoff at expiration, if the final stock price is  $S$ .

- (A) 0
- (B) 12
- (C) 36
- (D) 57
- (E) 78

49.

The market price of Stock A is 50. A customer buys a 50-strike put contract on Stock A for 500. The put contract is for 100 shares of A.

Calculate the customer's maximum possible loss.

- (A) 0
- (B) 5
- (C) 50
- (D) 500
- (E) 5000

50.

An investor bought a 70-strike European put option on an index with six months to expiration. The premium for this option was 1.

The investor also wrote an 80-strike European put option on the same index with six months to expiration. The premium for this option was 8.

The six-month interest rate is 0%.

Calculate the index price at expiration that will allow the investor to break even.

- (A) 63
- (B) 73
- (C) 77
- (D) 80
- (E) 87

51.

You are given the following information about Stock XYZ:

- i) The current price of the stock is 35 per share.
- ii) The expected continuously compounded rate of return is 8%.
- iii) The stock pays semi-annual dividends of 0.32 per share, with the next dividend to be paid two months from now.

The continuously compounded risk-free interest rate is 4%.

Calculate the current one-year forward price for stock XYZ.

- (A) 34.37
- (B) 35.77
- (C) 36.43
- (D) 37.23
- (E) 37.92

52.

The ask price for a share of ABC company is 100.50 and the bid price is 100. Suppose an investor can borrow at an annual effective rate of 3.05% and lend (i.e., save) at an annual effective rate of 3%. Assume there are no transaction costs and no dividends.

Determine which of the following strategies does not create an arbitrage opportunity.

- (A) Short sell one share, and enter into a long one-year forward contract on one share with a forward price of 102.50.
- (B) Short sell one share, and enter into a long one-year forward contract on one share with a forward price of 102.75.
- (C) Short sell one share, and enter into a long one-year forward contract on one share with a forward price of 103.00.
- (D) Purchase one share with borrowed money, and enter into a short one-year forward contract on one share with a forward price of 103.60.
- (E) Purchase one share with borrowed money, and enter into a short one-year forward contract on one share with a forward price of 103.75.

53.

For each ton of a certain type of rice commodity, the four-year forward price is 300. A four-year 400-strike European call option costs 110.

The continuously compounded risk-free interest rate is 6.5%.

Calculate the cost of a four-year 400-strike European put option for this rice commodity.

- (A) 10.00
- (B) 32.89
- (C) 118.42
- (D) 187.11
- (E) 210.00

Box spreads are used to guarantee a fixed cash flow in the future. Thus, they are purely a means of borrowing or lending money, and have no stock price risk.

Consider a box spread based on two distinct strike prices ( $K, L$ ) that is used to lend money, so that there is a positive cost to this transaction up front, but a guaranteed positive payoff at expiration.

Determine which of the following sets of transactions is equivalent to this type of box spread.

- (A) A long position in a ( $K, L$ ) bull spread using calls and a long position in a ( $K, L$ ) bear spread using puts.
- (B) A long position in a ( $K, L$ ) bull spread using calls and a short position in a ( $K, L$ ) bear spread using puts.
- (C) A long position in a ( $K, L$ ) bull spread using calls and a long position in a ( $K, L$ ) bull spread using puts.
- (D) A short position in a ( $K, L$ ) bull spread using calls and a short position in a ( $K, L$ ) bear spread using puts.
- (E) A short position in a ( $K, L$ ) bull spread using calls and a short position in a ( $K, L$ ) bull spread using puts.

56.

Determine which of the following positions has the same cash flows as a short stock position.

- (A) Long forward and long zero-coupon bond
- (B) Long forward and short forward
- (C) Long forward and short zero-coupon bond
- (D) Long zero-coupon bond and short forward
- (E) Short forward and short zero-coupon bond

(D)

(E)

60.

Farmer Brown grows wheat, and will be selling his crop in 6 months. The current price of wheat is 8.50 per bushel. To reduce the risk of fluctuation in price, Brown wants to use derivatives with a 6-month expiration date to sell wheat between 8.60 and 8.80 per bushel. Brown also wants to minimize the cost of using derivatives.

The continuously compounded risk-free interest rate is 2%.

Which of the following strategies fulfills Farmer Brown's objectives?

- (A) Short a forward contract
- (B) Long a call with strike 8.70 and short a put with strike 8.70
- (C) Long a call with strike 8.80 and short a put with strike 8.60
- (D) Long a put with strike 8.60
- (E) Long a put with strike 8.60 and short a call with strike 8.80

61.

An investor purchased Option A and Option B for a certain stock today, with strike prices 70 and 80, respectively. Both options are European one-year put options.

Determine which statement is true about the moneyness of these options, based on a particular stock price.

- (A) If Option A is in-the-money, then Option B is in-the-money.
- (B) If Option A is at-the-money, then Option B is out-of-the-money.
- (C) If Option A is in-the-money, then Option B is out-of-the-money.
- (D) If Option A is out-of-the-money, then Option B is in-the-money.
- (E) If Option A is out-of-the-money, then Option B is out-of-the-money.

62.

The price of an asset will either rise by 25% or fall by 40% in 1 year, with equal probability. A European put option on this asset matures after 1 year.

Assume the following:

- Price of the asset today: 100
- Strike price of the put option: 130
- Put option premium: 7
- Annual effective risk free rate: 3%

Calculate the expected profit of the put option.

- (A) 12.79
- (B) 15.89
- (C) 22.69
- (D) 27.79
- (E) 30.29

65.

Assume that a single stock is the underlying asset for a forward contract, a  $K$ -strike call option, and a  $K$ -strike put option.

Assume also that all three derivatives are evaluated at the same point in time.

Which of the following formulas represents put-call parity?

- (A) Call Premium – Put Premium = Present Value (Forward Price –  $K$ )
- (B) Call Premium – Put Premium = Present Value (Forward Price)
- (C) Put Premium – Call Premium = 0
- (D) Put Premium – Call Premium = Present Value (Forward Price –  $K$ )
- (E) Put Premium – Call Premium = Present Value (Forward Price)

66.

The current price of a stock is 80. Both call and put options on this stock are available for purchase at a strike price of 65.

Determine which of the following statements about these options is true.

- (A) Both the call and put options are at-the-money.
- (B) Both the call and put options are in-the-money.
- (C) Both the call and put options are out-of-the-money.
- (D) The call option is in-the-money, but the put option is out-of-the-money.
- (E) The call option is out-of-the-money, but the put option is in-the-money.

67.

Consider the following investment strategy involving put options on a stock with the same expiration date.

- i) Buy one 25-strike put
- ii) Sell two 30-strike puts
- iii) Buy one 35-strike put

Calculate the payoffs of this strategy assuming stock prices (i.e., at the time the put options expire) of 27 and 37, respectively.

- (A) -2 and 2
- (B) 0 and 0
- (C) 2 and 0
- (D) 2 and 2
- (E) 14 and 0

68.

For a non-dividend-paying stock index, the current price is 1100 and the 6-month forward price is 1150. Assume the price of the stock index in 6 months will be 1210.

Which of the following is true regarding forward positions in the stock index?

- (A) Long position gains 50
- (B) Long position gains 60
- (C) Long position gains 110
- (D) Short position gains 60
- (E) Short position gains 110

69.

Determine which of the following statements about futures and forward contracts is false.

- (A) Frequent marking-to-market and settlement of a futures contract can lead to pricing differences between a futures contract and an otherwise identical forward contract.
- (B) Over-the-counter forward contracts can be customized to suit the buyer or seller, whereas futures contracts are standardized.
- (C) Users of forward contracts are more able to minimize credit risk than are users of futures contracts.
- (D) Forward contracts can be used to synthetically switch a portfolio invested in stocks into bonds.
- (E) The holder of a long futures contract must place a fraction of the cost with an intermediary and provide assurances on the remaining purchase price.

70.

Investors in a certain stock demand to be compensated for risk. The current stock price is 100.

The stock pays dividends at a rate proportional to its price. The dividend yield is 2%.

The continuously compounded risk-free interest rate is 5%.

Assume there are no transaction costs.

Let  $X$  represent the expected value of the stock price 2 years from today. Assume it is known that  $X$  is a whole number.

Determine which of the following statements is true about  $X$ .

- (A) The only possible value of  $X$  is 105.
- (B) The largest possible value of  $X$  is 106.
- (C) The smallest possible value of  $X$  is 107.
- (D) The largest possible value of  $X$  is 110.
- (E) The smallest possible value of  $X$  is 111.

71.

A certain stock costs 40 today and will pay an annual dividend of 6 for the next 4 years. An investor wishes to purchase a 4-year prepaid forward contract for this stock. The first dividend will be paid one year from today and the last dividend will be paid just prior to delivery of the stock. Assume an annual effective interest rate of 5%.

Calculate the price of the prepaid forward contract.

- (A) 12.85
- (B) 13.16
- (C) 17.29
- (D) 18.72
- (E) 21.28

72.

CornGrower is going to sell corn in one year. In order to lock in a fixed selling price, CornGrower buys a put option and sells a call option on each bushel, each with the same strike price and the same one-year expiration date.

The current price of corn is 3.59 per bushel, and the net premium that CornGrower pays now to lock in the future price is 0.10 per bushel.

The continuously compounded risk-free interest rate is 4%.

Calculate the fixed selling price per bushel one year from now.

- (A) 3.49
- (B) 3.63
- (C) 3.69
- (D) 3.74
- (E) 3.84

73.

The current price of a non-dividend-paying stock is 100. The annual effective risk-free interest rate is 4%, and there are no transaction costs.

The stock's two-year forward price is mispriced at 108, so to exploit this mispricing, an investor can short a share of the stock for 100 and simultaneously take a long position in a two-year forward contract. The investor can then invest the 100 at the risk-free rate, and finally buy back the share of stock at the forward price after two years.

Determine which term best describes this strategy.

- (A) Hedging
- (B) Immunization
- (C) Arbitrage
- (D) Paylater
- (E) Diversification

74.

Consider an airline company that faces risk concerning the price of jet fuel.

Select the hedging strategy that best protects the company against an increase in the price of jet fuel.

- (A) Buying calls on jet fuel
- (B) Buying collars on jet fuel
- (C) Buying puts on jet fuel
- (D) Selling puts on jet fuel
- (E) Selling calls on jet fuel

75.

Determine which of the following risk management techniques can hedge the financial risk of an oil producer arising from the price of the oil that it sells.

- I. Short forward position on the price of oil
- II. Long put option on the price of oil
- III. Long call option on the price of oil

- (A) I only
- (B) II only
- (C) III only
- (D) I, II, and III
- (E) The correct answer is not given by (A), (B), (C), or (D)
