MILLIMAN STATEMENT OF RELIANCE AND LIMITATIONS OF ANALYSIS

This statement is intended to provide some additional background and understanding of the limitations of the analysis for readers of the April 20, 2007 Comparative Analysis of Claims-Based Tools for Health Risk Assessment report.

For purposes of the analysis, Milliman relied on the MedStat Marketscan database. While the data is reviewed for reasonability, Milliman did not perform an exhaustive audit on the information. Any errors in the data could cause results to change. Additionally, Milliman relied on the vendor products that were provided and the technical review from each vendor as described in the report.

As is expected due to the nature of projections, actual results will differ from what was projected.

This report was produced for the Society of Actuaries and is not intended to benefit any third party reader of the report. Given the technical nature of the analysis, it should be reviewed by qualified persons in order to fully understand the approach and results of the analysis.
