

Why Men Die Younger: Causes of Mortality Differences by Sex

APPENDIX A MORTALITY BY SEX DURING PRE-HISTORIC TO PRE-MODERN TIMES

Location	Type	Period	Findings				Source
			Age	Male Life Expectancy	Female Life Expectancy	Difference (Female–Male)	
Various sites in Europe	20 skeletal remains of Neanderthal	Roughly 150,000 to 30,000 years ago	20	15	5	(10)	Vallois 1937
Solo River at Ngandong, Java	11 skeletal remains of Solo man (<i>Homo soloensis</i> or <i>Javanthropus soloensis</i>)	Late Pleistocene (about 15,000 to 20,000 years ago)	20	23	23	—	Acsádi and Nemeskéri 1970
Eurasia	76 skeletal remains	Upper Paleolithic Period (35,000 to 8300 BCE)	20	15.5	9.8	(5.7)	Vallois 1937
Vassilievka III near Dniepropetrovsk of former USSR	35 skeletal remains of Cromagnon	Mesolithic (c8000–c2700 BCE)	20–24 25–29 30–35 35–39 40–44 45–49 50–54 55–59 60–64 65–69 70–74 75–79 80+	23.96 22.25 21.28 20.25 17.82 14.29 13.59 13.86 11.55 7.45 4.62 3.03 2.50	20.33 18.27 18.04 18.11 16.71 13.01 12.19 12.19 8.50 4.93 3.09 2.50 —	(3.63) (3.98) (3.24) (2.14) (1.11) (1.28) (1.40) (1.67) (3.05) (2.52) (1.53) (0.53) (2.50)	Acsádi and Nemeskéri 1970
Fofonovo in the Transbaikal region of Siberia	20 skeletal remains	End of Mesolithic (c8000–c2700 BCE) Early Neolithic	20–24 25–29 30–35 35–39 40–44 45–49 50–54 55–59 60–64 65–69 70–74 75–79 80+	35.85 30.85 25.85 20.85 16.44 12.40 9.70 9.45 7.97 6.02 3.74 3.00 0.50	22.74 24.45 21.59 18.49 15.10 11.89 8.45 6.66 6.94 6.57 4.51 2.50 —	(13.11) (6.40) (4.26) (2.36) (1.34) (0.51) (1.25) (2.79) (1.03) 0.55 0.77 (0.50) (0.50)	Acsádi and Nemeskéri 1970
Khirokitia on Cyprus	121 skeletal remains	4000–3000 BCE		Male Average Age at Death	Female Average Age at Death	Difference (Female–Male)	
			35.2	33.6	(1.6)	Angel 1953	

Note: Positive differences indicate greater male mortality, negative differences indicate greater female mortality.

APPENDIX F
MORTALITY OF ANIMALS BY SEX

Animal	Results		Source		
	Sex with Apparent Lower Mortality	Detail			
Mealworms	Female	Males averaged 60 days and females averaged 111 days.	Rockstein 1974		
Nematodes					
<i>Anguillula acetii</i>	Female	Males appear to be shorter-lived than females.	Geiser 1924		
<i>Echinorhynchus</i>	Female	Males appear to be shorter-lived than females.	Geiser 1924		
<i>Ascaris</i>	Female	Males appear to be shorter-lived than females.	Geiser 1924		
Crustaceans					
<i>Daphnia magna</i> (parthenogenetic)	Female	Of 4,000 animals kept at 18° C, the average duration of life was 39 days in males, 45 days in females; at 28° C it was 22 days in males, 29 days in females.	MacArthur & Baillie 1929		
<i>Moina rectirostris</i> (parthenogenetic)	Female	Duration of life in males was 20-25 days, in females 25-30 days.	Papanicolaou 1910		
<i>Simocephalus</i> <i>vetulus</i> (parthenogenetic)	Female	Duration of life in males was 1 1/2 months, in females 2 1/2 months.	Papanicolaou 1910		
Shore Crab (<i>Carcinedes</i> <i>moenas</i>)	Female	Males were shorter-lived than females.	Punnett 1904b		
<i>Gammarus locusta</i>	Female	In aquaria, of 50 males and 50 females, the mortality rate was much higher in males than in females.	Blegvad 1922		
<i>Mysis neglecta</i>	Female	In Nyborg Fjord, males apparently die before females.	Blegvad 1922		
<i>Mysis inermis</i>	Female	In Nyborg Fjord, males die before females.	Blegvad 1922		
<i>Mysis flexuosa</i>	Female	In Nyborg Fjord, males apparently die before females.	Blegvad 1922		
Mollusks					
		Average age in years	Conditions		
		Male	Female		
<i>Littorina scabra</i>	Female	4	5	wild	Sewell 1924
<i>Paludina</i> <i>contectoides</i>	Female	1	3	wild	Van Cleave & Lederer 1932
<i>Paludina conlecta</i>	Female	4.5	5	captivity	Oldham 1931
	Female	3.5	4.5	captivity	
<i>Paludina benalensis</i>	Female	1	3	wild & captivity	Annandale & Sewell 1921
<i>Paludina malleata</i>	Female	4	7	wild	Niwa 1950
<i>Lioplax</i> sp.	Female	In captivity, males live to be about 1 year of age, while females live to be about 2 years of age.			Van Cleave & Chambers 1935
Insects					
Parasitic Wasp (<i>Habrobracon</i> <i>Juglandis</i> Ashmead)	Female	Of 2,546 wasps, the wild-type males lived on average 24.1 days, the wild-type females 29.3 days, and the double mutant males lived on average 19.9 days, the double mutant females 24.0 days.	Georgiana 1949		
<i>Orthoptera</i>	Female	Males have lesser viability.	Carothers 1923		
Flies					
NAIDM strain of Common House Fly (<i>Musca domestica</i> <i>L.</i>)	Female	Of over 8,200 flies, the male average life expectancy was 18.74 days, while female's was 28.74 days.	Rockstein & Lieberman 1959		
NAIDM strain of Common House Fly (<i>Musca domestica</i> <i>L.</i>)	Female	Female average longevity is considerably greater than that of males under various dietary conditions.	Rockstein 1957		
Common House Fly (<i>Musca domestica</i>)	Female	Male average life expectancy was 28 days, while female's was 30 days.	Rockstein 1974		

APPENDIX F—Continued
MORTALITY OF ANIMALS BY SEX

Animal	Results		Source
	Sex with Apparent Lower Mortality	Detail	
<i>Drosophila melanogaster</i>	Male	Of 11,772 flies, the long-winged males lived on average 41.0 days, the long-winged females 38.8 days, and the short-winged males lived on average 14.2 days, the short-winged females 15.8 days.	Pearl & Parker 1921
<i>Drosophila melanogaster</i>	Female	Average length of life of 2,620 males was 31 days, while average length of life of 3,216 females was 33 days.	Pearl 1922
<i>Drosophila melanogaster</i>	Female	The average duration of life was 28.9 days in normal males, and 33.1 days in both normal females (2 X chromosomes) and triploid females (3 X chromosomes).	Gowen 1931
<i>Drosophila melanogaster</i> (vestigial strain)	Female	In 980 flies of a vestigial strain, the greater male mortality rates than female mortality rates were much more pronounced than in normal flies.	Pearl & Parker 1924
Mediterranean fruit fly (<i>Ceratitis capitata</i>)	Male	Of 1.2 million flies, males had a greater expectation of life at birth, but did not consistently have lower mortality at all ages.	Carey et al. 1995
Dragonflies	Female	For those dragonflies for which there are data, males apparently have higher mortality rates than females. 70 males averaged 46.8 days, while 70 females averaged 52.8 days, in captivity.	Corbet et al. 1960
Wild type D <i>Calliphora</i>	Female	70 males averaged 46.8 days, while 70 females averaged 52.8 days, in captivity.	Tribe 1967
Wild type S <i>Calliphora</i>	Male	145 males averaged 55.3 days, while 100 females averaged 49.9 days, in captivity.	Tribe 1967
C-mutant <i>Calliphora</i>	Female	194 males averaged 44.5 days, while 32 females averaged 51.3 days, in captivity.	Tribe 1967
W-mutant <i>Calliphora erythrocephala</i>	Female	68 males averaged 35.5 days, while 63 females averaged 43.4 days, in captivity.	Tribe 1967
Moths and Butterflies			
Average duration of life			
	Male	Female	No. of animals
<i>Samia cecropia</i>	Male	10.4	744 709
<i>Samia californica</i>	Female	8.7	6 6
<i>Tropaea luna</i>	Female	5.9	35 25
<i>Philosamia cynthia</i>	Female	5.9	204 155
<i>Telea polyphemus</i>	Female	8.1	399 338
<i>Callosamia promethea</i>	Female	4.6	162 112
<i>Carpocapsa</i>	Female	6.0	8009 9657
Lotus Borer (<i>Pyrausta penitalis</i>)	Female	6.8	27 43
<i>Pyrausta nubilalis</i>	Female	13.0	— —
<i>Porthetria dispar</i>	Female	17.0	Males are so short-lived that many die before females are sufficiently mature to be fertilized.
<i>Pthorimaea operculella</i>	Female	—	Males lived less than females in 271 of 275 pairs of isolated adults. Of the few females that died before the males, most were abnormal.
<i>Colias</i>	Female	—	The imaginal life is shorter in males than in females.
Beetles			
<i>Tenebrio molitor</i>	Female	In a large number of beetles the average length of life was 60 days in males, 111 days in females. The sex ratio of the pupae was approximately equal.	Gerould 1926
			Hein 1920

APPENDIX F—Continued
MORTALITY OF ANIMALS BY SEX

Animal	Results		Source	
	Sex with Apparent Lower Mortality	Detail		
4 species of <i>Dytiscus</i>	Female	Of the 58 longest-lived beetles, recorded, the females consistently outlived the males.	Blunck 1924	
Flour Beetle <i>Tribolium confusum</i> (Duval)	Female	Of 800 beetles, the average lifespan was 178 days in males and 199 days in females.	Pearl et al. 1941	
Rusty Grain Beetle (<i>Cryptolestes ferrugineus</i> Stephens) (Coleoptera: Cucujidae)	—	Survival rate for females was higher at -1° C, and lower at 35° C than that for males, and there were no significant sex differences in survival at 0, 10, 15, 20, 25, 35 or 45° C.	Kawamoto et al. 1989	
19 species of insects raised in captivity	—	Since sample sizes were so small (33 at most), this author performed statistical tests (permutation tests) by species and found that none of the results by species by sex were statistically significant at the 0.05 level.	Labitte 1916	
Arachnids (Spiders)				
<i>Mygalomorphae</i>				
<i>Theraposa</i> spp.	Female	25 yr	2 mo	Austad 1991
<i>Ummidia</i> spp.	Female	13+ yr	6 mo	Austad 1991
<i>Uagrus mexicanus</i>	Female	7+ yr	3 mo	Austad 1991
<i>Araneomorphae</i>				
<i>Frontinella pyramitela</i>	Female	3 mo	1 mo	Austad 1991
<i>Pisaura mirabilis</i>	Female	4 mo	1 mo	Austad 1991
<i>Nephila clavipes</i>	Female	4 mo	2 mo	Austad 1991
Black Widow (<i>Latrodectus mactans</i>)	Female	28.3 mo	4.2 mo	Austad 1991
<i>Filistata hibernalis</i>	Female	10+ yr	2 mo	Austad 1991
Black Widow (<i>Latrodectus mactans</i>)	Female	As adults, males are shorter-lived than females.		Montgomery 1908
Black Widow (<i>Latrodectus mactans</i>)	Female	The average length of life was 100 days in males and 271 days in females, of 82 males and 45 females.		Deevey & Deevey 1945
Black Widow (<i>Latrodectus mactans</i>)	Female	Females lived longer than males.		Blair 1934; Herms et al. 1935
<i>Dermacentor variabilis</i>	Female	Of 462 engorged nymphs, 46% were males.		Bischopp & Smith 1938
Reptiles				
Side-blotched lizards (<i>Uta stansburiana</i>)	Female	Males apparently have higher mortality rates than females.		Tinkle 1967
Rainbow lizards	Female	Males apparently have higher mortality rates than females.		Harris 1964
2 lizard species	Female	Males apparently have higher mortality rates than females.		Hirth 1963
Rusty lizards	Female	Males apparently have higher mortality rates than females.		Blair 1960

APPENDIX F—Continued
MORTALITY OF ANIMALS BY SEX

Animal	Results		Source
	Sex with Apparent Lower Mortality	Detail	
Musk turtles (<i>Sternotherus odoratus</i>)	Female	A collection of 255 adult turtles in Michigan had 70% females.	Risley 1933
Diamond back terrapins (<i>Malaclemmys centrata centrata</i> ; <i>Malaclemmys centrata concentrata</i>)	Female	Of 1,442 mature turtles grown in captivity, 85% were females. The proportion of females in broods hatched in different years varied from 63% to 100%. In 139 immature animals, however, the percentage of females was only 38%.	Hildebrand 1932, 1933
Snapping Turtles (<i>Chelydra serpentina</i>)	Male	Intermediate incubation temperatures produced mostly, with higher embryo and hatching survival, than the mostly females from extreme temperatures.	Bobyn & Brooks 1994
Alligators	Female	Of 166 alligators bought from dealers after collection and examined when 19 months or less of age, 67% were females.	Forbes 1940
Snakes (<i>Crotalus</i> and <i>Sistrurus</i>)	Male	Of 453 snakes observed at or near the time of birth, 47% were males. Of 625 wild animals collected as adults, 51% were males.	Klauber 1936
Pig Frogs (<i>Rana grylio</i>)	Female	In north central Florida, adult females had greater survival than adult males.	Wood et al. 1998
Birds			
European Starlings (<i>Sturnus vulgaris</i>)	Male	Mortality during the first year of life was 39% in males and 70% in females. They tend to be monogamous.	Coulson 1960; Gowaty 1996
Shags (<i>Phalacrocorax aristotelis</i>)	Male	Annual survival of females (80%) is about 5% less than that of the males.	Potts 1969
Yellow-eyed Penguin (<i>Megadyptes antipodes</i>)	Male	Annual survival of females is about 5% less than that of the males. They are generally monogamous and both parents tend the young.	Richdale 1957; Williams 1996
Great Tits (<i>Parus major</i>)	Male	Females have a greater adult mortality rate than males. They tend to be monogamous.	Perrins 1965; Dhondt et al. 1996
Pied Flycatcher (<i>Ficedula hypoleuca</i>)	Female	Based on 953 males and 1,298 females, after the first year males had greater mortality. About 5% of breeding males were polygynous.	Sternberg 1989
House Martin (<i>Delichon urbica</i>)	Male	After their first summer, males have annual survival of 46%, while females have 33%. Male breeders have a lifespan of 1–6 years, while female breeders' lifespan is 1–5 years. Both sexes build the nest and raise the young.	Bryant 1988, 1989
Kingfishers (<i>Alcedo atthis</i>)	—	Of 74 males and 51 females, there were no significant differences in longevity between males and females. They are essentially monogamous.	Bunzel & Drüke 1989
Meadow Pipit (<i>Anthus pratensis</i> L.)	Male	Males probably have lower mortality rates than females. They are essentially monogamous.	Hötker 1989
Song Sparrow (<i>Melospiza melodia</i>)	—	The median number of breeding seasons for both sexes is two. They are typically monogamous. Only the female builds the nest and incubates the eggs.	Hochachka et al. 1989

APPENDIX F—Continued
MORTALITY OF ANIMALS BY SEX

Animal	Sex with Apparent Lower Mortality	Results	Source
			Detail
Red-winged Blackbird (<i>Agelaius phoeniceus</i>)	—	Mortality for males and females is probably similar. They are strongly polygamous.	Orians & Beletsky 1989
Florida Scrub Jay (<i>Aphelocoma c. caerulescens</i>)	Male	In the wild, 20% of males and 35% of females die between their first and second birthdays. Older helpers have 16% annual mortality for males, and 26% for females. Breeders of both sex have 21% annual mortality. They are monogamous.	Fitzpatrick & Woolfenden 1989
Splendid Fairy-wren (<i>Mallurus splendens</i>)	Male	Breeding males have annual survival of 72%, breeding females 65%. Mean lifespan for male breeders is 5.0 years, 4.2 years for female breeders. Mean lifespan for male nestlings is 1.9 years, for female nestlings 1.7 years. Pairs remain together for life.	Rowley & Russell 1989
Sparrowhawks (<i>Accipiter nisus</i>)	Female	In south Scotland, survival in the first year was 31% for males and 49% for females; thereafter survival was 67–69% per year for males and 64–71% per year for females. There was no difference between the sexes in Britain. They are primarily monogamous.	Newton 1986, 1989
Barnacle Geese (<i>Branta leucopsis</i>)	Male	Female mortality is consistently higher than male mortality. In one sample, the median lifespan was 10 years for males and eight years for females. They are lifelong monogamous.	Owen 1982; Owen & Black 1989
Mute Swan (<i>Cygnus olor</i>)	Female	There were no survival differences between the sexes in two samples, while in a third sample the females survived better than did the males. They are strictly monogamous.	Bacon & Andersen-Harild 1989
Red-billed Gulls (<i>Larus novaehollandiae scopulinus</i>)	Female	Male annual survival averaged 84.4%, while female average annual survival was 89.4%. The sex ratio widened with age. They are monogamous.	Mills 1989
Color-Ringed Herring Gulls (<i>Larus Argentatus</i>)	Female	In northeast England, female survival was higher than that of males in most years, but the difference was not significant.	Coulson & Butterfield 1986
Quail, Partridge	Male	Autumn hunters' bags favored males: 58–66% male in eight cases; young shot were 47–54% males in seven cases	Hickey 1955
California quail (<i>Lophortyx californica</i>)	Male	Of 17,632 birds, mortality is greater in females than in males.	Emlen 1940
Japanese Quail (<i>Coturnix Coturnix Japonica</i>)	Male	Males live longer than females in captivity.	Daniels 1968
Ring-necked pheasant	Female	Bags were 26% males. Pheasant fathers are neglectful of their young.	Einarsen 1945; Skutch 1976
Ring-necked pheasant	Male	Sex ratio favored males by almost 2:1 after three years of prohibited hunting on Protection Island, Washington. Pheasant fathers are neglectful of their young.	Einarsen 1945; Skutch 1976
Pheasant hybrids	Female	Of 514 males and 252 females hatched, 70% of the males and 51% of the females died within six months. Pheasant fathers are neglectful of their young.	Thomas & Huxley 1927; Skutch 1976

MORTALITY OF ANIMALS BY SEX

Animal	Results		Source
	Sex with Apparent Lower Mortality	Detail	
Grey Ducks (<i>Anas superciliosa</i>)	—	In New Zealand, there was no evidence of sex-specific survival differences.	Caithness et al. 1991
Mallards (<i>Anas platyrhynchos</i>)	Male	In New Zealand and North America, survival rates of males were higher than those in females.	Caithness et al. 1991
Leghorn and hybrid chickens	Female	The male/female ratio in 5,683 deaths, which occurred within the first eight weeks after hatching, was 52.7%, while the ratio at hatching was 48.8%.	Landauer & Landauer 1931
Several breeds of domestic fowls	—	No sex difference in numbers that hatch or that die shortly thereafter.	Byerly & Jull 1935
Poultry	Female	In experimental breeding poultry, males were very much shorter-lived than females.	Pease 1947
Pigeons	Male	Of 570 birds, the mortality rates of the sexes were similar until adulthood; then, during first two years of life, they were higher for females than for males.	Cole & Kirkpatrick 1915
Pigeons	Male	Males live longer than females.	Levi 1957
Bengalese Finch (<i>Lonchura striata</i> : Fam. Estrildidae)	Male	15 males averaged 57.3 months of life, while 24 females averaged 47.5 months of life in captivity.	Eisner 1967
House finches (<i>Carpodacus mexicanus</i>)	Female	In an epidemic killing millions of birds, proportionately more males were killed.	Nolan et al. 1998
Fish			
<i>Cynolebias adloffii</i>	Female	21 males averaged 10.1 months of life while 23 females averaged 11.5 months of life, in captivity.	Walford & Liu 1965
<i>Cymatogaster</i>	Female	At birth, the sex ratio was about equal, but most adults are females.	Eigenmann 1896
Dogfish (<i>Spinax niger</i>)	Female	Of 308 embryos, the ratio of males to females was approximately equal; in adults there were twice as many females as males.	Punnett 1904a
Plaice (<i>Pleuronectes platessa L.</i>)	Female	Of 179,118 animals caught in the North Sea, the percentage of males was 55% in the youngest age group and gradually decreased in collections of older series of fish, until it was only 8% in the oldest group.	Hefford 1909, 1916
Plaice (<i>Pleuronectes platessa L.</i>)	Female	In the Barents Sea, an unfished area, 47% of the catch of young fish were males, while only 2% of the old fish were males.	Atkinson 1908
Plaice (<i>Pleuronectes platessa L.</i>)	Female	Males constituted about 45% of all fish caught in North Sea, but only 20% or less of those were at least seven years old.	Wallace 1914
Plaice (<i>Pleuronectes platessa L.</i>)	Female	The trend of data in fish obtained from the North Sea and elsewhere is similar to that stated above.	Wallace 1907; Petersen et al. 1907
Witch (<i>Pleuronectes cynoglossus L.</i>)	Female	Of 2,748 young fish mostly 25–32 cm. long, 66% were males, whereas of 422 fish over 34 cm. long, 27% were males.	Fulton 1904
Canadian Plaice (<i>Hippoglossoides platessoides</i> Fabr.)	Female	In three-year-old fish from the Gulf of St. Lawrence, the number of males exceeded that of females, but the proportion decreased in older fish until in the 14–24-year groups practically only females were found.	Huntsman 1918
Salmon (<i>Salmo salar L.</i>)	Female	Males were 42% of 1,294 one-year-old fish, but were only 30% of 347 two-year-old fish.	Menzies 1916, 1921

APPENDIX F—Continued
MORTALITY OF ANIMALS BY SEX

Animal	Results		Source
	Sex with Apparent Lower Mortality	Detail	
Salmon (<i>Salmo</i> <i>salar</i> L.)	Female	During early life there were more males than females, while in older age groups there were more females than males.	Masterman 1913
<i>Plecoglossia</i> <i>altivelis</i>	Female	This annual fresh-water fish in Japan and Formosa occasionally survives for two years; all such survivors were reported to be females.	Nomura 1921
Smelt (<i>Osmerus</i> <i>eperlanus</i> L.)	Female	There were more males among the young and more females among the old.	Masterman 1913
Common Top-minnow (<i>Gambusia</i> <i>affinis</i> B. & G.)	Female	Females survive transit better than males.	Geiser 1921
Top-minnow (<i>Gambusia</i> <i>holbrooki</i> Grd.)	Female	At 4 weeks of age, the sexes were approximately equal, while in old fish females greatly outnumbered males.	Geiser 1921, 1924
<i>Amphigonopterus</i> <i>aurora</i>	Female	Males were 53% of 630 embryos, but only 34% of 403 adults.	Hubbs 1921
<i>Lebiasina reticulatus</i> (Peters)	Female	Among 67 fish, the ratio of males to females at birth was 1 to 2.3. If a greater proportion of males is added to the aquarium, the ratio comes to an equilibrium at one male to two females. The sex ratio in aged populations was not reported. Males in the English Channel had greater mortality than did females.	Breder & Coates 1932
Poor cod (<i>Gadiformes</i> <i>minutus</i>)	Female	Males in the Marmara Sea had greater mortality than did females.	Menon 1950
Hake (<i>Merluccius</i> <i>merluccius</i>)	Female	Males on the west coast of Canada had greater mortality than did females.	Akyuz 1959
Butter sole (<i>Isopsetta isolepis</i>)	Female	In the laboratory, 23 males lived on average 19.5 months, while 49 females lived on average 20.8 months.	Hart 1948
<i>Platypoecilus</i> , <i>Xiphophorus</i> and their hybrids	Female	Males have total male mortality soon after mating, at about 11.5 months, while female <i>A. minimus</i> die at about 1.5 years.	Bellamy 1934
Mammals			Diamond 1982
Marsupial mice (<i>Antechinus</i>)	Female	Males apparently have higher mortality rates than females.	Wood 1970
Marsupial mice (<i>Antechinus stuartii</i>)	Female	Males apparently have higher mortality rates than females.	Tyndale-Biscoe & Smith 1969
Marsupial glider (<i>Schoinobates</i> <i>volans</i> (Kerr))	Male	The virgin females in the F ₁ generation lived an average of 27 months and males 29 months.	Woolley 1946
Mice—crosses of dba females and C ₅₇ black males	Male	The length of life in the F ₁ generation was 30 months in females, 33 months in males.	Woolley 1946
C57BL/6J inbred strain of laboratory mice	Male	Females apparently have higher mortality rates than males.	Committee on Animal Models for Research on Aging 1981
DBA2/J inbred strain of laboratory mice	Female	Males apparently have higher mortality rates than females.	Committee on Animal Models for Research on Aging 1981

B6D2 F ₁ inbred strain of laboratory mice	Male	Females apparently have higher mortality rates than males.	Committee on Animal Models for Research on Aging 1981
BALB/cAnBd _f inbred strain of laboratory mice	Female	Males apparently have higher mortality rates than females.	Committee on Animal Models for Research on Aging 1981
C3H _f /Bd inbred strain of laboratory mice	Female	Males apparently have higher mortality rates than females.	Committee on Animal Models for Research on Aging 1981
C3C F ₁ inbred strain of laboratory mice	Male	Females apparently have higher mortality rates than males.	Committee on Animal Models for Research on Aging 1981
CBA strain of mice	—	Younger males have lower mortality, older males have greater mortality.	Zurcher et al. 1982
RFM strain of mice	—	No significant differences in male and female longevity.	Zurcher et al. 1982
C57BL strain of mice	Male	Females apparently have higher mortality rates than males.	Zurcher et al. 1982
NZB strain of mice	Male	Females apparently have higher mortality rates than males.	Zurcher et al. 1982
Mice (<i>Mus musculus</i>)	Female	Life expectancy from birth was 19 months for males and 22 months for females.	Masoro 1990
Mice (<i>Peromyscus leucopus</i>)	Male	Life expectancy from birth was 48 months for males and 46 months for females.	Masoro 1990
White Mouse	Female	Average length of life of 23 males was 712 days, 773 days for 24 females.	Robertson et al. 1934
Rats	Female	Higher male prenatal mortality.	King 1921
Rats	Female	In 11 strains of rats, the males were shorter-lived than the females. The difference was 0.06–2.44 months of male lifespans of 0.59–21.59 months.	Curtis et al. 1933
Rats	Female	Average length of life of 76 males was 622 days, 687 days for 76 females.	McCay et al. 1943
Rats	Female	Average length of life of 14 males was 612 days, 688 days for 19 females.	Carlson & Hoelzel 1946
Albino Rats (<i>Rattus norvegicus</i>)	Female	Expectation of life at 31 days of age, under laboratory conditions, was 669.4 days for males and 693.1 days for females.	Wiesner & Sheard 1934-35
Domesticated strain of wild brown rat	Male	There was little difference in survival from weaning to age 20 months between the sexes, but slightly better for males.	King 1939
Sprague-Dawley inbred strain of laboratory rats	Female	Females have a longer life expectancy than males.	Simms 1967, Wexler 1970, & Hoffman 1979
Long-Evans inbred strain of laboratory rats	—	No significant differences in male and female longevity.	Hoffman 1979
F344 inbred strain of laboratory rats	Male	The median length of life of males is 27.5, 26.5 for females.	Sass et al. 1975
WAG-Rij strain of rats	Female	Females have significantly longer life expectancy and maximum life span than do males.	Masoro 1990
BN/Bi strain of rats	Female	Females have slightly greater survival rates at most ages than do males.	Burek & Hollander 1980

APPENDIX F—Continued

Animal	Results		Source
	Sex with Apparent Lower Mortality	Detail	
Rats (<i>Rattus rattus diardii</i>)	Female	Average length of life of males in Malaya was 3.0 months and 3.5 months for females.	Harrison 1956
Short-tailed shrews (<i>Blarina brevicauda</i>)	Male	Males lived, on average, 4.6 months, while females lived on average 4.4 months, in captivity.	Blus 1971
Orkney Vole (<i>Microtus oreocensis</i>)	Female	Mortality rates were determined to be greater for males than for females.	Leslie et al. 1955
Syrian hamsters (<i>Mesocricetus auratus</i> , Sch:SYR)	Male	In captivity, the median survival time of 771 males was 550 days, while the median survival time of 454 females was 390 days.	Redman et al. 1979
Chinese hamsters	Male	Mean survival time for males was 38.8 months and 35.3 months for females.	Committee on Animal Models for Research on Aging 1981
Guinea pigs (<i>Cavia porcellus</i>)	Male	Males live longer than females in laboratories.	Committee on Animal Models for Research on Aging 1981
Mongolian Gerbil (<i>Meriones unguiculatus</i>)	Female	In captivity, mean survival of 35 males was 110 weeks and of 33 females was 139 weeks.	Troup et al. 1969
Mongolian Gerbil (<i>Meriones unguiculatus</i>)	Female	Males had a mean life span of 1,062 days, while females had a mean life span of 1,146 days. Infant mortality was not considered.	Arrington et al. 1973
Mastomys (<i>Praomys (Mastomys) natalensis</i>)	Female	Mean (50% survival) ages for males was 21 months and 23 months for females.	Committee on Animal Models for Research on Aging 1981
Wild Rabbit (<i>Oryctolagus cuniculus cuniculus</i> L.)	Female	Males apparently have higher mortality rates than females.	Stephens 1952
Martens (<i>Martes americana</i>)	Female	In an intensively trapped area in Maine, survival from May 1 to December 15 was higher for adult females than adult males.	Hodgman et al. 1994
Platypuses	Female	Males live for approximately 5 years, females live to over 8 years.	Moyal 2001
Pigs	Female	The ratio of males to females among 538 fetuses was 131%, while the ratio of males to females at birth varied between 95% and 103%.	Parkes 1925
Pigs	Female	Of over 2,000, the mortality between birth and weaning was 39% for males and 34% for females.	Crew 1925
Cattle	Female	The ratio of males to females among 1,000 embryos was 123%, while the ratio of males to females at birth varied between 100% and 113%.	Jewell 1921
Horses	Female	The ratio of males to females born dead was 107%, while the ratio of males to females born alive was 97%.	Goehlert 1888
Horses	—	Data of English thoroughbred racehorses listed in the General Stud Book showed that stallions and mares had similar life expectancy.	Comfort 1959
Irish Wolfhounds	Female	The mean ages at death of animals surviving to one year were 4.95 years for 39 males and 6.59 years for 44 females.	Comfort 1956

APPENDIX F—Continued
MORTALITY OF ANIMALS BY SEX

Animal	Results		Source
	Sex with Apparent Lower Mortality	Detail	
Dall Sheep (<i>Ovis dalli</i>)	Male	From carcasses in Mount McKinley National Park where most were killed by wolves, mortality rates were determined to be greater for females than for males.	Caughley 1966
Bighorn Sheep (<i>Ovis canadensis</i>)	Female	Male survival was lower than female survival, and the sex difference increased with age.	Loison et al. 1999
Roe Deer (<i>Capreolus capreolus</i>)	Female	Male survival was lower than female survival, and the sex difference increased with age.	Loison et al. 1999
Columbian Black-Tailed Deer (<i>Odocoileus hemionus columbianus</i> [Richardson])	Female	Among young deer, males have greater mortality than females.	Taber & Dasmann 1954
Mule & Black-Tailed Deer (<i>Odocoileus hemionus</i> spp.)	Female	Males appear to have greater mortality during prenatal and early postnatal periods and among yearlings.	Robinette et al. 1957
Isard (<i>Rupicapra pyrenaica</i>)	Female	Male survival was lower than female survival, and the sex difference increased with age.	Loison et al. 1999
Polar Bears (<i>Ursus maritimus</i>)	—	In western Hudson Bay, Canada, there were no differences in survival of cubs or yearlings between males and females.	Derocher & Stirling 1996
Harbor Seals	Female	After reaching adulthood, males can live 2 decades, females can live 3 decades.	Dietrich 2001
Hawaiian Monk Seals (<i>Monachus schauinslandi</i>)	Female	At French Frigate Shoals and Laysan Island, survival of immature females appears to be better than males.	Gilmartin et al. 1993
Bottlenose Dolphins	—	Survival rates are similar for males and females.	Demaster & Drevenak 1988
White Whales	—	Survival rates are similar for males and females.	Demaster & Drevenak 1988
Sperm Whales	Female	Females outlive males by 30 years on average.	Perls et al. 1999
Killer Whales (<i>Orcinus orca</i>)	Female	In coastal waters of British Columbia and Washington State, resident female mean life expectancy is 50.2 years, resident male mean life expectancy is 29.2 years.	Olesiuk et al. 1990
Primates			
Simangs (<i>Hylobates syndactylus</i>)	Male	Females have greater mortality than males.	Allman et al. 1998
Spider Monkeys (<i>Ateles</i>)	Female	Males have greater mortality than females.	Allman et al. 1998
Owl Monkeys (<i>Actus</i>)	Male	Females have greater mortality than males.	Allman et al. 1998
Titi Monkeys (<i>Callicebus</i>)	Male	Females have greater mortality than males.	Allman et al. 1998
Goeldi's Monkeys (<i>Callimico</i>)	Female	Males have slightly greater mortality than females.	Allman et al. 1998
Capuchin Monkeys (<i>Cebus olivaceus</i>)	Female	In a natural population, females have a substantial survival advantage.	Robinson 1988
Marmosets	—	Males and females have similar survival.	Allman 1999
Tamarins	—	Males and females have similar survival.	Allman 1999
Rhesus Monkeys (<i>Macaca mulatta</i>)	Female	In a large captive population, females had lower mortality than males up to about age nine, but greater mortality thereafter.	Dyke, Gage, Mamelka et al. 1986

APPENDIX F—Continued
MORTALITY OF ANIMALS BY SEX

Animal	Sex with Apparent Lower Mortality	Results		Source
			Detail	
Macaque Monkeys	Female	Females live, on average, eight years longer than males.		Perls et al. 1999
Pigtail Macaques (<i>Macaca nemestrina</i>)	—	Of 1,174 animals in captivity over eight years, mortality of males from birth to 30 days of age was greater than for females. Between 30 and 180 days, female mortality was greater than males mortality, but this was likely due to external circumstances.		Dazey & Erwin 1976
Crab-eating Macaques (<i>Macaca fascicularis</i>)	Female	In zoo colonies, male mortality during the first year of life is higher than is female mortality.		Angst 1976
Toque Macaques (<i>Macaca sinica</i>)	Female	If free-ranging, mortality of female infants and juveniles is greater than males, due to exclusion from food, but by age four to five years, male mortality surpasses female. After reaching maturity, females live 17 years on average, and males live 10 1/2 years		Dittus 1975a, 1975b; & Dittus 1977
Baboons (<i>Papio papio</i>)	Female	More males are born than females, but by adulthood, more females than males are still alive.		Masure & Bourliere 1971
Olive Baboons (<i>Papio anubis</i> (J. P. Fisher))	Female	In free-ranging animals, males have greater mortality than females.		Berger 1972
Gelada Baboons (<i>Theropithecus gelada</i>)	Female	Females older than 8.5 years have lower mortality than males of the same age.		Dunbar 1980
Gibbons (<i>Hylobates tar</i>)	Female	Males have greater mortality than females except for extremely high ages.		Allman et al. 1998
Orangutans (<i>Pongo pygmaeus</i>)	Female	Males have greater mortality than females.		Allman et al. 1998
Gorillas (<i>Gorilla gorilla</i>)	Female	Males have greater mortality than females.		Allman et al. 1998
Chimpanzees (<i>Pan troglodytes</i>)	Female	From three captive populations of 1,488 chimpanzees, male life expectancy at birth was 20.7573 years and female life expectancy at birth was 29.4441 years.		Dyke, Gage, Alford et al. 1995
Chimpanzees (<i>Pan troglodytes</i>)	Female	In a 22-year study of 228 animals in the Mahale Mountains, there was an equivalent number of male and female births, but three times as many adult females as adult males, which was not due to differential migration.		Nishida 1990
Chimpanzees	Female	At Gombe, males have greater mortality than females.		Goodall 1986

APPENDIX G
**CORRELATION OF THE DIFFERENCE IN MALE/FEMALE LIFE EXPECTANCY WITH THE
 DIFFERENCE IN PERCENTAGE OF MALE/FEMALE DEATHS ATTRIBUTABLE TO SMOKING IN
 44 DEVELOPED COUNTRIES**

Country	Life Expectancy			% of Deaths Attributable to Smoking		
	Male	Female	Difference (Female-Male)	Male	Female	Difference (Male-Female)
Russian Federation	58.0	71.5	13.5	30	4	26.0
Latvia	62.5	74.3	11.8	25	3	22.0
