Introductory Study Note

The Introductory Study Note has a complete listing of all study notes as well as errata and other important information.

Case Study

A case study will not be provided for this examination.

[Past Exams](#)

Past Exams from 2000-present are available on SOA website.

Updates

Candidates should be sure to check the Updates page on the exam home page periodically for additional corrections or notices.

Individual Life and Annuities – Life Product Management Exam
Fall 2019/Spring 2020

1. Topic: Product Design, Pricing and Assumptions

Learning Objectives

The candidate will understand the designs and risks of the common life and annuity products and features, as well as the methods and metrics used to design and price these products.

Learning Outcomes

The Candidate will be able to:

- a) Describe the designs of the common life and annuity products and evaluate their associated features and inherent risks
- b) Describe and evaluate methods and metrics used to design and price these products, and assess their profitability
- c) Describe and assess insurance and annuity distribution approaches and the impact of emerging technologies
- d) Describe and evaluate the impact of VM-20 on pricing
- e) Describe considerations and practices related to "Lapse-Supported" insurance
- f) Describe methodologies, approaches, considerations and tools related to the Underwriting function
- g) Describe methodologies and considerations used in the regulation of nonforfeiture practices
- h) Describe and evaluate the product development environment and cycle
- i) Describe and apply the principles of "Macro-Pricing" ("Project Based Analysis" vs. "Unit Based Pricing")
- j) Describe the operation of Life Acceleration Riders and their role in meeting market needs
- k) Describe what is meant by Life Settlements and assess their impact on insurance product pricing/management
- l) Describe and apply the principles of "Risk-Based Pricing" and "Market Consistent Embedded Value"
- m) Describe and apply the methodology for evaluating pricing sensitivities using a "Pricing Surface"
- n) Describe and apply the requirements of applicable ASOPs on Life and Annuity Product Pricing and Assumptions
- o) Describe how taxes may be treated in a pricing model and the impact of tax reform on life products profitability
- p) Describe and apply methods for pricing term conversions
- q) Describe and evaluate the types of assumptions commonly used in actuarial pricing and product development
- r) Describe and evaluate the role of Behavioral Economics in understanding and modeling policyholder behavior in the life and annuity context
- s) Describe how predictive analytics can be used in life and annuity pricing applications

Individual Life and Annuities – Life Product Management Exam
Fall 2019/Spring 2020

3. Topic: Product Management, Operations and Studies

Learning Objectives

The candidate will understand common issues and practices related to In Force and New Business Product Management, and how experience studies are designed and used for evaluating past experience and for setting assumptions.

Learning Outcomes

The Candidate will be able to:

- a) Recommend and justify changes to nonguaranteed elements such as credited rates, policy charges, policyholder dividends and guaranteed renewable premiums
- b) Describe and evaluate compliance with applicable regulations (including NY Reg. 210)
- c) Describe and assess the impact of adverse selection due to Life Settlements
- d) Describe and evaluate the challenges insurers face in a low and potentially rising interest rate environment
- e) Describe and evaluate how diversification of insurance risks can reduce volatility
- f) Describe and evaluate approaches for quantifying the price of VA guarantees and evaluating hedge effectiveness
- g) Describe how experience studies are designed and used for evaluating past experience, and for setting assumptions
- h) Describe the framework, process, and significant considerations for creating mortality tables used by life insurance companies
- i) Describe and apply methods for working with actual and expected experience metrics
- j) Describe and apply the methods for determining exposures, and considerations for developing select period mortality rates
- k) Describe and apply the use of statistical credibility methods used for validating actuarial judgment when evaluating experience
- l) Explain and apply the Limited Fluctuation and Buhlmann credibility methods to mortality and lapse experience study data

Individual Life and Annuities – Life Product Management Exam
Fall 2019/Spring 2020

4. Topic: Reinsurance

Learning Objectives

The candidate will understand the various forms of traditional reinsurance, will be able to assess how and when they are effectively used, and will be able to perform the associated accounting (from both ceding and assuming perspectives) for basic reinsurance transactions.

Learning Outcomes

The Candidate will be able to:

- a) Evaluate and analyze traditional and advanced reinsurance transactions, and prepare related financial statement entries
- b) Describe and evaluate indemnity reinsurance and evaluate its use, forms, and requirements
- c) Describe risk transfer considerations, and evaluate their impact on reinsurance agreement provisions
- d) Describe and evaluate nonproportional reinsurance arrangements and their use
- e) Describe and evaluate how strategic/customized reinsurance solutions may enhance insurer prospects

Individual Life and Annuities – Life Product Management Exam
Fall 2019/Spring 2020

5. Topic: Asset and Portfolio Management Topics

Learning Objectives

The candidate will understand the role of the Investment Actuary and the Portfolio Management Process in the Life Insurance company context, as well as the common forms of Fixed income securities and their uses, and the methods and processes used for evaluating portfolio performance and asset allocation.

Learning Outcomes

The Candidate will be able to:

- a) Describe the portfolio management process in an insurance company, and the role of Investment Policy, the Investment Actuary, and external portfolio managers
- b) Describe and evaluate how a company's objectives, needs and constraints affect investment strategy and portfolio construction (including capital, funding objectives, risk appetite and risk return tradeoff, tax and accounting, accounting considerations, and constraints such as regulation, rating agency ratings and liquidity)
- c) Describe and assess the role of and significant considerations related to the design and function of asset allocation strategies
- d) Describe and assess Fixed Asset Portfolio management methods, and immunization (including derivatives) and cash matching strategies, including:
 - Considerations such as managing funds against a bond market index, the classification of possible strategies, the impact of risk factors and tracking risk, and the use of indexing and active strategies
 - Considerations such as managing funds against liabilities, the use of dedication strategies and immunization strategies, the assessment of risk minimization for immunized portfolios, and the use of cash flow matching and combo strategies
 - The use of derivative enabled strategies, and the use of futures, swaps, and options
- e) Describe and assess Alternative Investment Portfolios (including real estate) in the context of an insurance company portfolio
- f) Describe and apply methods and processes for evaluating portfolio performance, including performance attribution, sources of earnings analysis on investment income, benchmarks, metrics, and risk adjusted performance appraisals (including total return vs reported earnings)
- g) Describe the principles of Liquidity Risk Management in an insurance company portfolio management context
- h) Describe and apply conventional yield metrics used in bond performance evaluation
- i) Describe the attributes of US Treasuries, Agency Debt Securities, Municipal bonds, Corporate bonds, Private Money Market securities, Floating Rate Agreements, Agency Mortgage Backed securities, Agency Collateralized Mortgage securities, Interest Rate Swaps and Swaptions, Credit Derivatives and High Yield Bonds, and the markets they are traded in
- j) Describe how an insurance company can hedge against the cost of borrowing through forward rate futures, and perform related calculations
